PAINTING IN THE FAR EAST

AN INTRODUCTION TO THE HIS-
TORY OF PICTORIAL ART IN ASIA
ESPECIALLY CHINA AND JAPAN
BY LAURENCE BINYON

SECOND EDITION
REVISED THROUGHOUT

LONDON
EDWARD ARNOLD

1913

[All rights reserved]

TO
CHARLES L. FREER

PREFACE

THE first edition of this book was published five years ago. In the interval much has happened. A quantity of new material has been brought to light ; interest in the subject has everywhere grown and widened. In most of the countries of the West collectors are beginning to collect, seriously and studiously, and no longer with a haphazard curiosity, specimens of the classic art of China and Japan. Museums begin to realise that these things are worthy of acquisition for their own sake and not merely as illustrations of ethnography or religion. At this moment an entire museum, exclusively devoted to the art of Eastern Asia and built expressly for the purpose, is being opened at Cologne. The example will doubtless be followed. It is a sign of the times.

It is now possible, therefore, in Europe and America to get some first-hand acquaintance with Asian painting, both of early and modern times. But, as I pointed out in the preface to the first edition of this book, the student who cannot make the journey to the Far East will find indispensable the immense series of reproductions published in Japan.

PAINTING IN THE FAR EAST

In my former preface I noted my indebtedness to the *Kokka*, the monthly magazine which was founded so long ago as 1889. The drawback to this array of volumes, treasure-house as it is, is that the Western student cannot easily find what he wants or bring the examples of each artist together for comparison. In the British Museum the plates of the *Kokka* have been detached from the text and arranged according to schools and artists for the convenience of the student. Besides the *Kokka*, there are numerous and splendid publications of the Shimbi Shoin. In the notes to the first edition of this book reference was made to the reproductions of famous and typical pictures scattered among the twenty volumes (not all of them at that time published) of the "Shimbi Taikwan," or "Selected Relics of Japanese Art." These references now seem hardly necessary, since there has appeared another (not yet completed) publication from the same house, the "Toyo Bijutsu Taikwan," or "Selected Masterpieces from the Fine Arts of the Far East," which has the great advantage of being arranged chronologically. To supplement this, there are separate works devoted to particular schools and artists. The coloured reproductions in all these Japanese publications are of a beauty and quality of texture which must be seen to be believed. I must reiterate the debt which the following pages owe

viii

PREFACE

to these volumes, as to the well-known works of Dr. Giles, Dr. Hirth, and others, mentioned in the text.

The preparation of this new edition has brought home to me my great temerity in attempting the original enterprise. In the last five years the opportunity of studying the array of masterpieces so generously lent by Japan to England in 1910 and exhibited at Shepherd's Bush, as well as the chief treasures of the Boston Museum, of the marvellous collection of Mr. Freer at Detroit and of other American collections, has been a stimulating experience, by which I hope the present edition has benefited. I have not tried to alter or enlarge the scope of the volume; it does not profess to be more than an introduction to the subject. As stated in the original preface, it is "an attempt to survey the achievement and to interpret the aims of Oriental painting, and to appreciate it from the standpoint of a European in relation to the rest of the world's art. It is the general student and lover of painting whom I have wished to interest. My chief concern has been, not to discuss questions of authorship or archæology, but to inquire what æsthetic value and significance these Eastern paintings possess for us in the West. Therefore in each period I have chosen a few typical masters who concentrate in their work the predominant ideals of their time,

PAINTING IN THE FAR EAST

rather than bewilder the reader with lists of unfamiliar names." But, after all, questions of authorship and archæology involve themselves in æsthetic questions: one wants to be on firm ground; and I have found myself revising a good many statements. Especially is this the case with the chapters on Chinese painting. The wonderful discoveries made in Chinese Turkestan during the last few years have proved of the highest importance. We now really know something about the religious art of China during the great T'ang era, or at least we have the means of knowing. The difference made by these discoveries, and also, one must add, by the unsuspected riches which Chinese collections have revealed at the same time, has necessitated a considerable amount of re-writing.

In spite, therefore, of the fact that since my first edition several elaborate works have appeared—I need only mention Fenollosa's "Epochs of Chinese and Japanese Art," M. Raphael Petrucci's "La Philosophie de la Nature dans l'Art d'Extrême Orient," Mr. Arthur Morrison's "Painters of Japan," each of which in one way or another treats of its subject in much greater fullness of detail than I have attempted—in spite of this, I still hope that these pages may continue to serve their purpose of kindling an interest in the art of Asia and setting the reader on the road to more exhaustive study.

P R E F A C E

The notes have been entirely re-written. In them I have given lists of important artists of the several periods to supplement the text, together with references to original paintings in accessible collections, both European and American, or to published reproductions of pictures. Neither lists nor references are in any sense complete ; they are merely intended as guide-posts to the reader who desires to make acquaintance with the actual material of study.

The illustrations in this edition have been increased in number, and a good many of the old ones have been exchanged for other examples, either more representative, more attractive, or more amenable to photography. It is hopeless to expect more than a suggestion of the originals from any of our mechanical processes of reproduction, though Mr. Donald Macbeth has carried out a most difficult task with unusual success. Nearly half of the illustrations are from the British Museum, which in the last five years has been enriched, on the Chinese side, by a number of fine examples from Frau Olga-Julia Wegener's collection and from other sources, and on the Japanese side, quite recently, by the splendidly munificent gift from Sir William Gwynne-Evans, Bart., of the Arthur Morrison collection. For the rest I am indebted to Mr. Freer of Detroit ; the Trustees of the Boston Museum ; Dr. F. R.

PAINTING IN THE FAR EAST

Martin of Stockholm ; Sir William van Horne ; Mr. A. D. Hall ; Mr. A. W. Bahr ; the Director of the Shimbi Shoin ; and Mr. Sei-ichi Taki, the editor of the *Kokka*. I wish to record my gratitude to these and the many other collectors and museum authorities in Europe and America, who have shown me much kindness and greatly aided my studies ; and to my wife, who has helped me to prepare this new edition and compiled a fresh index for it.

L. B.

PAINTING IN
THE FAR EAST

CHAPTER I. THE ART OF THE EAST AND THE ART OF THE WEST

IN the great mystical poem of Persia, the "Masnavi," it is told how the Greeks and the Chinese disputed as to which were the better artists. Their dispute was brought before the Sultan ; a contest was arranged, and a house allotted to each party for them to embellish in their own way. The poet tells how the Chinese covered the walls of their house with paintings, while the Greeks contented themselves with cleaning theirs till the walls shone bright and clear as the heavens. The work of the Chinese was greatly admired, but it was the Greeks who were adjudged the prize.

This story is told merely by way of illustration, and is put to symbolic use by the poet. It would be rash to treat it as historic relation. Yet doubtless it reflects some truth of tradition. At any rate it embodies a traditional antithesis between the art of the East and the West.

In what precisely does this antithesis exist ? Does the Persian poet's allusion emphasise, as we might perhaps infer, a reliance of the East on colour, a reliance of the West on form ? Such an interpretation would commend itself probably to general acceptance in this country. This thesis has, in fact,

PAINTING IN THE FAR EAST

been recently promulgated by a thoughtful writer in an interesting and ingenious essay.* In seeking to form a conclusion on such a subject, we cannot do better than follow Aristotle's method, and start by examining some theory already in the field. And as this theory accords with popularly received impressions, we shall do well to see what support it really has from facts.

“The two main ideas,” writes the critic in question, “with which all art is concerned seem to have been separately contributed, one by the West, the other by the East. Form is chiefly a matter of the intellect. The arts which deal with form convey ideas. Their appeal is to the mind. Colour, on the other hand, conveys no ideas. It is emotional, and appeals to the senses rather than the intellect. And this being so, it seems natural that the Western temperament, intellectual rather than sensuous, should excel in form rather than colour; while the Eastern, sensuous rather than intellectual, should excel in colour rather than form.”

There is more than one point in these too absolute statements which challenge discussion and criticism. But let us first follow our author in the development of his theory.

After characterising Oriental colour as something different from Western colour, as distinguished by a note of “swarthy and deep half-melancholy rich-

* “Byzantine Architecture.” *Edinburgh Review*, October 1904.

THE ART OF EAST AND WEST

ness," he goes on to say that in the Eastern conception of colour there is "that union of strength and simplicity which reveals itself only when a nation is dealing with the things which it understands and which correspond to its own genius. To match the Eastern sense for colour we must have recourse to the Western sense for form." And the West is weak, trivial, and uncertain in colour, as the East is unstable, eccentric, and capricious in form.

But more: "Though the idea of colour is indigenous to the East, yet of an adequate expression of that idea, of its embodiment in any great work or school of art, the East has never been capable. . . . Diffused throughout the life of the East as this sense for colour is, we look in vain for any great artistic manifestation, any school of painting or architectural style of Eastern origin and growth, which shall centralise and collect that sense for colour for us. The impotence that saps the emotional temperament has waited on the East." According to this writer, it was the Byzantine Greeks who were called upon to effect a manifestation of the Oriental ideal of colour, an ideal which the Oriental races had been too feeble-willed to do more than trivially illustrate in minor arts and crafts.

All this is as plausible at first sight as it is interesting. But now we must ask, On what evidence

PAINTING IN THE FAR EAST

is this theory based? The writer has many and definite illustrations to draw from in the field of Western art, but his illustrations from the East are fragmentary and vague. Have the Oriental races really been so impotent and uncreative? Do the vague associations of luxury and sensuous magnificence which the "gorgeous East" brings into our minds really represent all that is to be known of it? Is there nothing besides carpets and embroideries, lustrous wares and richly ornamented metal-work, familiar to our eyes in our shops, as Aladdin's trays of rubies and the glowing furniture and background of the "Arabian Nights," together with a hundred phrases from the poets, are familiarly impressed on our imagination, with the same vague and sumptuous effect? If so, then we must indeed say that art in the East has never emerged from the barbaric stage, the stage in which decoration precedes design, and in which the sense for beauty remains childish, fascinated by colour and movement, unable to grasp organic relations, incapable of coherent and articulate production.

We say "the East," with how huge a generalisation! Most Englishmen, if they ask themselves what materials their minds have collected to furnish and fill out this broad idea, will think above all of India. And if they pursue the question into a special field of art, reminiscences of travel or of reading will recall images of architecture that are,

THE ART OF EAST AND WEST

at least to our eyes, inexpressive and fantastic, together with, it may be, some scattered specimens of Persian miniature painting or Japanese colour-prints, and for the rest mere craftsman's work, textiles, and *bric-à-brac*.

Whatever be the merits of Oriental architecture, one may say at once that it is not in this art that the genius of Asia has found its supreme expression. There is a reason for this, which we shall revert to later.

Let us take pictorial art: Persian paintings, Japanese prints and drawings, what have these in common? Are they sporadic outbursts, one on the western the other on the eastern verge of the vast continent? Or are they both related to an older and more central art?

The latter answer is the right one. It is in China that the central tradition of Asian painting must be sought for. Of all the nations of the East, the Chinese is that which through all its history has shown the strongest æsthetic instinct, the fullest and richest imagination. And painting is the art in which that instinct and that imagination have found their highest and most complete expression. If we are to compare the art of the East and the art of the West, in their essential character and differences, we must take as our type of the former the pictorial art of China.

But why not of Japan? some may ask. For it

PAINTING IN THE FAR EAST

has been popularly believed—though the belief is fast losing ground—that in art the Japanese have enormously improved on what they have derived from China. Certainly they have added new elements, and in some particular respects have surpassed the older nation, though in other respects they have never attained the same level. So vast an amount of Chinese painting has been lost or destroyed that we have no means for any detailed comparison. Yet even what little remains vindicates its great claim. The Japanese look to China as we look to Italy and Greece : for them it is the classic land, the source from which their art has drawn not only methods, materials, and principles of design, but an endless variety of theme and motive. As in the late nineteenth century Japan has taken over the material civilisation of Europe, so, more than a thousand years earlier, she took over and absorbed the civilisation of China, its art, its religion, its thought. But it was not foundation and starting-point alone that Chinese art supplied, but a pattern and ideal. Again and again the painters of Japan have renewed their art with fresh life and inspiration from the vigorous schools of the continent. The first great school of painting in Japan derived entirely from the grand and forcible style of the masters of the T'ang dynasty. In the twelfth and thirteenth centuries a school arose which developed a native character in its design, and enrolled in its

THE ART OF EAST AND WEST

ranks a number of splendid draughtsmen and gorgeous colourists. When this school decayed, it was again from China that the renaissance came, the great renaissance of the fifteenth century which established the three classic schools of painting in Japan, and gloried in infinite variations on themes already handled with consummate feeling and expression by the galaxy of artists who flourished under the Emperors of the House of Sung. The next phase in Japanese painting was inaugurated by emulation of the rich and decorative colouring of the earlier Ming epoch ; and once more, in the eighteenth century, a last wave from the now declining art of China left its traces on impressible Japan.

The painting of the two countries, therefore, represents one great and continuous tradition, a tradition maintained and made illustrious by countless artists for two thousand years. From China that tradition, with its principles and ideals, originates ; not only Japan in the East, but (to a less degree) Persia in the West, has derived inspiration for its art from the fertilising overflow of that wonderful nation whose history has been the continued absorption from without of barbarous neighbours and invaders, and the imposition on its conquerors of its own civilisation.

The general conception of Chinese art which till the last few years prevailed in Europe was entirely

PAINTING IN THE FAR EAST

founded on the productions of its decadence. Even in the case of the porcelain, it was the later kinds that were collected and prized: the simpler and grander forms of the earlier periods are only beginning to be appreciated. In the case of painting, the real nature of the art remained unguessed at for centuries after "Chinoiserie" won their first vogue in the West. The bastard and comparatively worthless productions made now for two centuries for the European market in Canton represented for those of the general public who had formed any idea at all on the subject the pictorial art of the Empire; and they associated that art with bright, if harmonious, colours, a tame and flaccid sense of form, and the monotonous repetition of effete conventions.

But if we take the central tradition of Asian painting in its great periods and most typical form of expression, what do we find? We find a type of painting in which colour, so far from being predominant, is an always subordinate element, and is often entirely absent.

The painting of Asia is throughout its main tradition an art of line. The Chinese of the twelfth century, the Japanese of the fifteenth, evolved an art of tone, but in both cases eliminated colour.

A Chinese critic of the sixth century, who was also an artist, published a theory of æsthetic principles which became a classic and received uni-

THE ART OF EAST AND WEST

versal acceptance, expressing, as it did, the deeply rooted instincts of the race. In this theory it is Rhythm that holds the paramount place; not, be it observed, imitation of Nature, or fidelity to Nature, which the general instinct of the Western races makes the root-concern of art.

In this theory every work of art is thought of as an incarnation of the genius of rhythm, manifesting the living spirit of things with a clearer beauty and intenser power than the gross impediments of complex matter allow to be transmitted to our senses in the visible world around us. A picture is conceived as a sort of apparition from a more real world of essential life.

Everyone knows the story of the grapes of Zeuxis which appeared so like real grapes that birds came to peck at their tempting clusters. The Chinese have parallel fables about famous masterpieces, but how different an order of ideas they attest! A great artist painted a dragon upon a temple wall, and as he put the final touch to it, the dragon, too instinct with life, soared crashing through the roof and left an empty space. The inner and informing spirit, not the outward semblance, is for all painters of the Asian tradition the object of art, the aim with which they wrestle.

Let us take an example, a Chinese painting of the thirteenth century. The subject is "The Moon over Raging Waves." Doubtless to the Chinese

PAINTING IN THE FAR EAST

mind the theme had its symbolic side ; the peace of the radiant soul above the fluctuating tumult of the passions is perhaps the parallel suggested ; but we need no more for enjoyment than the inherent poetry of the contrast. The picture presents us with a vision of the sea, a waste of waves curling over into foam, pale under the brightness of the full moon. And the waves are represented by lines which, if they neglect the accidental edges and broken forms of rough water as we see it, emphasize the continuous curve and rhythm by which waves are actually created. Another treatment of this subject—traditional, like so many of the subjects of Asian art—shows the golden moon appearing over the shoulder of a shadowy promontory, and at its base a single wave flung up out of darkness into the moonlight. The same treatment of water persists throughout this art, from the earliest examples we know down to Okio and Hokusai in Japan. It is always the essential character and genius of the element that is sought for and insisted on : the weight and mass of water falling, the sinuous, swift curves of a stream evading obstacles in its way, the burst of foam against a rock, the toppling crest of a slowly arching billow ; and all in a rhythm of pure lines. But the same principles, the same treatment, are applied to all subjects. If it be a hermit sage in his mountain retreat, the artist's efforts will be concentrated on the expression, not only in the

THE ART OF EAST AND WEST

sage's features, but in his whole form, of the rapt intensity of contemplation; towards this effect every line of drapery and of surrounding rock or tree will conspire, by force of repetition or of contrast. If it be a warrior in action, the artist will ensure that we shall feel the tension of nerve, the heat of blood in the muscles, the watchfulness of the eye, the fury of determination. That birds shall be seen to be, above all things, winged creatures rejoicing in their flight; that flowers shall be, above all things, sensitive blossoms unfolding on pliant, up-growing stems; that the tiger shall be an embodied force, boundless in capacity for spring and fury—this is the ceaseless aim of these artists, from which no splendour of colour, no richness of texture, no accident of shape diverts them. The more to concentrate on this seizure of the inherent life in what they draw, they will obliterate or ignore at will half or all of the surrounding objects with which the Western painter feels bound to fill his background. By isolation and the mere use of empty space they will give to a clump of narcissus by a rock, or a solitary quail, or a mallow plant quivering in the wind, a sense of grandeur and a hint of the infinity of life.

Who shall say of such an art that it is not mature, still less that it is impotent to express ideas? In its coherence and its concentration, in its resolute hold on the idea of organic beauty, this tradition,

PAINTING IN THE FAR EAST

so old in the East, manifests the character of an art that has reached complete development.

This painting, we have said, is an art of line rather than an art of colour. Yet it is not difficult to see how an art of line can come to have for one of its chief characteristics, and for its most obvious attraction, the charm of colour. The Japanese prints of the eighteenth century, for instance, proved a revelation of exquisite colour to Europeans ; and yet they too are in their essence linear designs. The reason is that these linear designs, though expressive of interior form, aim at no illusion of relief, and ignore cast shadows. The spaces to be coloured are flat spaces, and the instinct of the artist is to invent a harmony of colours which intensifies and gives added charm to the harmony of line. Such an art never loses sight of the primary condition of a picture as a decoration on a flat wall ; and with this decorative aim the free and undistracted development of colour-harmonies is naturally associated. It is when a new and absorbing interest is added to pictorial art, when the artist attempts to produce the likeness of figures and objects as they appear in relief, and begins to use light and shade as a means to this end, that his mind is distracted from the pursuit of harmony in line and colour ; these become secondary aims, and as a natural consequence the sense for colour becomes weak and uncertain. Why is it that in Italian painting before

THE ART OF EAST AND WEST

the Renaissance, even where no decided genius for colour is shown, the colour of quite minor, insignificant, and provincial masters pleases us? It is because the painting of those early periods was as yet unconfused and undistracted by the problems of chiaroscuro. European painting, however, was soon committed to the portrayal of relief and the ideal of complete realisation. In the North this was inevitable because of the powerful instinct towards realism innate in the races of the Netherlands, the early flowering of whose genius directed the aims of painting. In Italy it was equally inevitable, because of the intellectual passion for science which was inseparable from the genius of Florence; and it is from the great Florentine school that Europe inherits its main tradition of design for all ideal subjects. Scientific curiosity has, ever since the Renaissance, played a potent part in the history of European art. In painters like Paolo Uccello we find the struggle to master perspective overshadowing the purely artistic quest for beauty, just as in our own time an intense interest in scientific discoveries about the nature of light has led a whole school of landscape painters to sacrifice fundamental qualities of design in a passionate endeavour to realise on canvas the vibration of sunlight.

Science must of course play a part in the production of all mature painting. The artist in his desire to discover beauty is confronted with difficult

PAINTING IN THE FAR EAST

problems which he must acquire the science to solve ; but it is as a means to an end, and only as a means. It is the besetting vice of our Western life as a whole, so complex and entangled in materials, that we do not see things clearly ; we are always mixing issues and confounding ends with means. We are so immersed in getting the means for enjoying life that we quite forget how to enjoy it, and what is called success is, oftener than not, defeat. So, too, in current criticism of painting, we find it commonly assumed that an advance in science is of itself an advance in art ; as if correct anatomy, a thorough knowledge of perspective, or a stringent application of optical laws were of the slightest value to art except as aids to the effective realisation of an imaginative idea.

The scientific aim which has warped and weakened certain phases of modern painting in Europe is a symptom of Western tendencies in extreme. The East has also sometimes carried its tendencies to extreme ; we find the expression of them in what is known as the Literary Man's Painting of China and Japan, a kind of art which has as little reference as possible to external fact and relies entirely on vague suggestions of poetic mood.

But, ignoring these extreme expressions, let us regard rather the sum of classic painting in Asia and in Europe.

The main arresting difference is, as we have seen,

THE ART OF EAST AND WEST

that the painting of Europe does not limit itself ; it is not content till it has mastered every possible means of communicating ideas through the representation of the visible world : it emulates the effects of sculpture, in order to communicate the emotions which alone can be produced by figures seen in roundness and relief ; it emulates the effects of architecture, in order to communicate the emotions that only ordered spaces and perspective can evoke. And it wants to produce all these effects at once, as well as the effects of harmonious line and colour.

The painting of Asia, on the other hand, limits itself severely. It leaves to sculpture and to architecture the effects proper to those arts. But it has not remained merely decorative, as so many people assume ; it is in its own way fully as mature as our own.

The great painters of either continent have pursued the same end. They have sought to communicate life-giving ideas of beauty in a sensuous embodiment. The means employed have been different, yet not so different as would appear at first sight. Limited to line, the painters of Asia have concentrated centuries of study on the effort to make that line intimately expressive of form ; and with mere contour they succeed in producing the illusion of perfect modelling. The very ease with which relief can be represented by shadows, as with us, has taken away from our painters the

PAINTING IN THE FAR EAST

necessity for this concentration and weakened their sense for expressive line. The painters of the East have succeeded in giving life to their figures ; and that the figures in a picture should impress us as real, breathing, laughing, sorrowing humanity, this is the essential thing we demand. Absolute anatomical correctness, which pedants demand, detracts from this impression, and is no more present in the great painting of Europe than in the great painting of Asia. The fact is, we are so used to our own set of conventions that we forget how large a part they play even in the most realistic pictures, and when confronted, in the art of Asia, with a different set of conventions, we are apt to fix our attention entirely on them, instead of allowing ourselves to receive the suggestions of reality which these are intended to produce. So it is often said that there is no perspective in Chinese and Japanese painting. M. Raphael Petrucci, in a most illuminating, comprehensive, and masterly essay,* has entirely exploded this fallacy. He has conclusively shown that the mastery of perspective in Eastern painting is quite comparable to that of European painting, only it is different in the conventions it allows ; it has been naturally evolved out of the past history of art in Asia, whereas in Europe its problems were approached in the fifteenth

* "Les Caractéristiques de la Peinture Japonaise." Par R. Petrucci
Revue de l'Université de Bruxelles, Janvier-Février, 1907.

THE ART OF EAST AND WEST

century from an abstract point of view, as geometry, in a conscious effort to recover effects known to have been achieved by the Greek painters. As we shall see, Chinese painters of the eighth century and the twelfth century, among many others, have left treatises on the means of representing in a picture the appearances of the relative distances of objects in space. But M. Petrucci has also shown that in European painting, even in masterpieces of artists like Leonardo and Ingres, the laws of perspective are boldly violated in obedience to æsthetic necessities, although we are entirely persuaded of the reality of the effect produced, and the violation is only perceived when we resolutely discard the artistic impression and make a patient scrutiny from the point of view of science alone. He reminds us, too, how easily Hokusai was able to assimilate European perspective, learnt from the Dutch at Nagasaki, to the perspective of the Japanese.

Readers of Goethe's "Conversations" will remember his striking comment on a landscape by Rubens. He showed an engraving after this picture to the ingenuous Eckermann, and asked him to say what he noticed in it. After minutely describing every detail, Eckermann at last saw what he was intended to see, that the figures in the picture cast their shadows one way and the trees another. Light, in fact, was introduced from two different sides, in a manner "quite contrary to Nature." "That is the

PAINTING IN THE FAR EAST

point," said Goethe. "It is by this that Rubens proves himself great, and shows to the world that he with a free spirit stands above Nature and treats her conformably with his high purposes." Admitting that the expedient was somewhat violent, still Goethe praises "the bold stroke of the master, by which in a genial manner he proclaims to the world that art is not entirely subject to natural necessities, but has laws of its own." "The artist," he continues, "has a twofold relation to Nature; he is at once her master and her slave. He is her slave, inasmuch as he must work with earthly things in order to be understood; but he is her master, inasmuch as he subjects these earthly means to his high intentions."

Goethe's mind, so magnificently free from prejudice, at once sheds the light of truth upon the subject. The laws of science are not the laws of art. Yet so permeated are our ways of thought (how much more so since Goethe's day!) by scientific conceptions, that to many this criticism of his will seem a startling paradox and a dangerous heresy. On the contrary, the danger and the heresy are with those who import scientific views into judgments on art. Few of us probably realise how strong this influence is; to what a degree, in the public, it prevents a free judgment of painting, and how tyrannical a claim it makes upon the painter of to-day.

THE ART OF EAST AND WEST

Here is one thing we can learn from the study of Oriental painting. We can learn to distrust this tendency, absorbed from an age of triumphant science, to set up an external objective standard, asking of a picture whether it correctly represents the objects it portrays, instead of asking to what service the materials have been used, and whether it is a real experience to our souls. Our art, like our civilisation, too often defeats its own end ; in the thirst for reality it falls into indiscriminate acceptance, and loses or obscures essentials. The art and the life of the East stand, with far more constancy, for a finely valuing choice.

We may now turn back for a moment to re-examine the theory with which we started. The notion that the idea of form is the great contribution of the West to art, and the idea of colour the great contribution of the East, is, we can now see, founded on entirely inadequate evidence, and even if true would not touch the essential question. There is indeed an unreality in the antithesis. What is meant by the idea of colour and the idea of form ? The phrases have no meaning except in so far as the idea of harmony or rhythm underlies both. Nor can the intellectual appeal in art be divorced from the sensuous or emotional appeal. Great art only begins when all these are absorbed and unified in one complete yet single satisfaction. It is a proof of the profound ignorance prevailing in the West

PAINTING IN THE FAR EAST

of Asiatic art that so earnest and thoughtful a student as the critic I have quoted should totally ignore the painting of China and Japan. In that painting the Oriental sense for colour is assuredly "collected and centralised" to magnificent effect. Yet I do not believe that the sense of colour is peculiar to the East, and that the West has only a "taste" for colour, without instinctive sense. Remember how easily even the Oriental sense for colour, strengthened by ages of tradition, can be corrupted by the introduction of cheap pigments invented by the chemists of Europe. Nowhere is there lovelier colour than in the Japanese prints of the fine period in the eighteenth century; nowhere is there viler or more hideous colour than in those same prints when invaded during the 'sixties of the last century by the aniline pigments of the West. In Europe also the multiplication of pigments by chemistry has further weakened a colour sense already enfeebled or obscured among painters by scientific aims imported into art; just as our sense for form has been vitiated and degraded by the commercial manufactures of machinery. I incline to believe that in the life of mediæval Europe the sense for colour played as strong a part as it is still claimed to play in Oriental life.

Both in this and in other respects, if we take a comprehensive view of the pictorial art of both continents, the differences which arrest at first sight

THE ART OF EAST AND WEST

tend to lessen or disappear on closer scrutiny. The critic I have quoted was misled, I think, by concentrating his attention on architecture rather than on painting. With Oriental architecture this book is not directly concerned. Yet all art is one, and I do not wish to ignore conclusions that such a study might provoke. We find that painting in the East has carefully eschewed all emphasis on the solidity of materials ; it ever tends to absorb object in idea ; it is natural, therefore, that we should not expect the Asian spirit to find congenial expression in such an architecture as our own. I write with diffidence on the subject, but so far as I understand the architecture of Japan, for instance, I would say that it was conceived in a different spirit from our own ; that a building was regarded less in itself than as a fusion of man's handiwork into Nature, the whole surroundings of the scene making part, and perhaps the chief part, of the architect's conception. And here we touch what is certainly a very real and animating principle in the pictorial art of the East, and come at last on a more essential difference between the art of the East and the West.

This difference is rooted in philosophy of life, in mental habit and character. An opposition between man and Nature has been ingrained in Western thought. It is the achievements, the desires, the glory and the suffering of man that have held the central place in Western art ; only very slowly and

PAINTING IN THE FAR EAST

unwillingly has the man of the West taken trouble to consider the non-human life around him, and to understand it as a life lived for its own sake : for centuries he has but heeded it in so far as it opposed his will or ministered to his needs and appetites. But in China and Japan, as in India, we find no barrier set up between the life of man and the life of the rest of God's creatures. The continuity of the universe, the perpetual stream of change through its matter, are accepted as things of Nature, felt in the heart and not merely learnt as the conclusions of delving science. And these ways of thought are reflected in Eastern art. Not the glory of the naked human form, to Western art the noblest and most expressive of symbols ; not the proud and conscious assertion of human personality ; but, instead of these, all thoughts that lead us out from ourselves into the universal life, hints of the infinite, whispers from secret sources—mountains, waters, mists, flowering trees, whatever tells of powers and presences mightier than ourselves : these are the themes dwelt upon, cherished, and preferred.

The Italian Renaissance, and all the art deriving from its inspiration, represents the glorification of man. Only lately have we begun to feel dissatisfied with the ideas embodied in that movement and its splendid productions ; to become conscious that Europe has lost something which we desire to recover from those times which in the great Gothic

THE ART OF EAST AND WEST

cathedrals had power to transmute materials, even the most solid and massive, into ideas and aspirations. Setting out to conquer the material world, to master its secrets and harness its energies to our uses, we have given our devotion to science ; but in the end science has humbled us. In the nineteenth century we in Europe came to apprehend more justly the true place of man in the world, and the art of our time arrives at just such a conception as the art of China had expressed, with perhaps even more truly modern feeling, a thousand years ago. I hope to make this plain when we come in the course of our survey to the painting of the Sung period, and can consider its productions in more detail.

It is in landscape, and the themes allied to landscape, that the art of the East is superior to our own. The power of the art of the West excels in the human drama.

The Western spirit is full of an overpowering sense of the sublime capacities of mankind.

“ What a piece of work is a man ! how noble in reason ! how infinite in faculty ! in form and moving how express and admirable ! in action how like an angel ! in apprehension how like a god ! the beauty of the world ! the paragon of animals ! ”

“Shakespeare”

Yet it is inevitable that to this spirit the hour of discouragement and dismay should bring, with a

PAINTING IN THE FAR EAST

sharpness unknown to the Oriental temper and the detached Oriental mind, the desolation of the sentence of mortality :

“And yet what to me is this quintessence of dust !”

The high Renaissance pride and glow are apt to leave this bitter taste in the end. Absorption in man as the centre of the world and hero of existence leads certainly to loss of that sanity and sweetness which an openness to the abiding presences of the non-human living world around us infuses into life, and which are so abundant and refreshing in the art we are about to consider. It is not by that absorption that we shall find the full meaning or animating power of our Western faith that in man the divinity is revealed.

I have sometimes thought that if our modern painting had developed continuously from the art of the Middle Ages, without the invasion of scientific conceptions which the Renaissance brought about, its course would appear to have run on very similar lines to that of the painting of the East, where the early religious art, so like in aim to that of the early Italian frescoes, flowered gradually into naturalism, always pervaded by a perfume of religious idealism. [As it is, the painting of Europe is richer, more complex, it has added powers and new resources ; its contrast with Eastern art is like

THE ART OF EAST AND WEST

that of dramatic poetry with lyric poetry ; more matter has been taken in hand, more difficulties attempted. The limitations of Eastern tradition keep its art pure and make even the productions of insignificant artists a pleasure to look upon. In our more burdened and more troubled art failure is far more frequent, though to its greatest triumphs attaches, it may be, a greater glory.

CHAPTER II. EARLY ART TRADITIONS IN ASIA

IN the winter of 1895-96, Dr. Sven Hedin, travelling across Central Asia, passed in the district of Khotan the mounded remains of deserted cities, covered up with drifts of sand. Khotan is in Chinese Turkestan. It was a small kingdom, paying tribute to China, lying to the north and somewhat to the east of Kashmir, on the southern edge of the Takla-Makan Desert.

Already there had filtered through to India objects claimed to have been found in the ruined cities of Khotan ; and now the information brought by Sven Hedin suggested that the sites which he had noticed should prove a favourable starting-point for systematic excavation. An expedition was sent out by the Indian Government under Dr. (now Sir) Aurel Stein, and the results of his successful exploration published in 1903, and more fully in 1907, proved of singular interest. That expedition has been followed up by numerous missions to Turkestan, Russian, German, French, and Japanese, as well as English, all of which have added greatly to our knowledge.

The cities of Khotan were abandoned about the

ART TRADITIONS IN ASIA

eighth century A.D. The sand encroaching in waves from the great desert had made them no longer habitable. It was not, as with Pompeii and Herculaneum, a sudden calamity arresting a people in its daily life ; what the people of Khotan valued they took away with them ; yet what was left is interesting enough. And the dry sand of the desert has preserved it all with perfect freshness for more than a thousand years.

What, then, do we find in this little, remote kingdom in the heart of Asia ? We find sculpture and paintings ; we find heaps of letters on tablets of wood ; odds and ends of woven stuffs and furniture ; and police notices on strips of bamboo. The police notices—couched in just such terms as we use to-day, “ Wanted, a man with a grizzled moustache,” &c. &c.—the police notices are in Chinese. The letters are written in a form of Sanskrit. But the string with which the wooden tablets are tied is sealed with a clay seal ; and in most cases the seal is a Greek seal, the image of an Athene or a Heracles.

Here then we touch three great civilisations at once : India, Greece, China.

Each of these three great civilisations contributes to the building up of Asiatic art. What, then, of the paintings and the sculpture ?

The paintings are in outline, with a certain amount of flat colour, on a white ground. The

PAINTING IN THE FAR EAST,

subjects are mostly figures from Buddhist legend. The style is of a primitive character.

If we ask ourselves what affinities these paintings reveal, with what art we can connect them, we cannot answer very definitely. We are reminded of features in Indian, Persian, Chinese, and early Japanese painting. What is certain is that these paintings represent, probably in a provincial type, the traditions of the early pictorial art of Asia, characterised by the definite strong outline on a white ground. They represent, we may safely assume, a whole world, whole epochs, of painting which are lost to us.

Will the sculptures tell us more? They at once remind us of other sculpture; of the numbers of statues and reliefs found in the district called Gandhara, lying along the lower valley of the Kabul River. These, like those of Khotan, are all Buddhist images. We know that the art of the sculptors of Gandhara was at its finest in the first and second centuries of our era. But in their statues we notice a gradual change and development. We see what seems a Greek Apollo; and then little by little the Greek features become more Indian; Apollo transforms himself into Buddha. The glad serenity of the Sun-God of the West, so open-eyed, so triumphant, takes on an ever-deepening shade of thought, the rapt smile of the world-withdrawn spirit contemplating eternity.

ART TRADITIONS IN ASIA

Here, then, in Gandhara, as farther east in Khotan, the art of Greece makes its power felt. We know how immense that power has been as a living influence through centuries of European art, and we may be tempted to ascribe to it a governing influence in Asia. Yet in truth these traces that we have noticed mark the ebb of a receding tide.

In 323 B.C., Alexander died in Babylon. He had carried the arts and civilisation of Hellas far into the East. Cities on sites that he had chosen, Kabul, Kandahar, endure to this day. He had penetrated into remote regions north-west of India, and on into Turkestan. From the mouths of the Indus he had sent his fleet westward to explore the Indian Ocean. Arrian's narrative of the voyage reveals to us what a tremendous, unwilling adventure this was to the Greek sailors: they felt embarked on another Odyssey, and at every isle they touched expected legendary monsters to attack them. The will of one man, whose magnificent ambition was to conquer the world for the mind even more than to possess its riches and dominions, had hurried with him a home-sick army thousands of miles from its base, over deserts of burning sand, over mountains of perpetual snow, into the plains of India and to the shores of the Ganges. He reduced the Indian Ocean from a sea of terror and romance to known and navigated waters; he was preparing, even when death overtook him, to

PAINTING IN THE FAR EAST

man his fleet again and send it from the Euphrates westward round the continent of Africa.

So much a single brain, filled with the conviction that "man's foe is ignorance," could do. He had brought Asia and Europe into contact, as they have never really been in contact since till Japan in our own day, filled with the passion for knowledge, absorbed the achievements and the civilisation of the West.

But Alexander died, not forty years old; and after his death the two continents shrank apart. Even his own exploits relapsed into fable. He became a hero of romance. Even now in common opinion he is conceived as a dazzling figure of knight-errantry in the mists of history, too remote to be more than half believed in. His empire was split into fragments. One of these fragments was Bactria (Bokhara); and there, it has been supposed, a school of sculptors maintained some tradition of the art of Greece, though the traces of Greek style visible in the statues of Gandhara are now generally thought to be due rather to later contact with the Roman world. Still, it was Alexander who gave Hellas her footing in Asia.

In spite of the tendency of the two continents to shrink apart, the lines of communication between East and West were more open than is commonly supposed. Darius had already sent an expedition eastwards to explore Asia and discover the mouths

ART TRADITIONS IN ASIA

of the Indus. Great trade routes were established. Nor was all the enterprise on the side of the West. In 200 B.C. the Chinese, seeking markets for their silk, opened communications with Western Asia. A century later the Emperor Wu Ti sent a mission to the same regions. Greek designs appear on the earliest metal mirrors of China. It is possible that in the Chinese fable of the Paradise of the West * the Myths of the Greeks may be reflected.

Conquest and commerce we note, therefore, as two powerful influences in the dissemination of the arts. But a third and far more powerful influence was religion.

The history of the art of Asia is intimately bound up with the history of Buddhism, just as the history of European art is intimately bound up with the history of Christianity. By the growth and spread of Buddhism all the various influences we have noticed in the arts of many races were swept along and fused into a vitalising stream. Sakyamuni, the prince of a little territory in Nepal, who abandoned his throne, his wealth, and his family, stricken with the thought of the miseries of mankind; who abandoned asceticism after years of practice, as he had abandoned the world before, and at last found enlightenment in the discovery that all evil resided in the individual will to live—Sakyamuni lived and died in the sixth century B.C. Three centuries

* H. A. Giles, "Adversaria Sinica," No. 1.

PAINTING IN THE FAR EAST

later the religion of the Enlightened One, the Buddha, Sakyamuni, was embraced by the great Emperor Asoka, that pure and lofty soul whom Marcus Aurelius would have hailed with fraternal emotion, whose name is venerated over all the East, who united India, and whose mild edicts engraved on pillars were set up all over India, some of which are found standing to-day. The Buddhist art encouraged by Asoka was affected by Western sculpture, whether through inheritance from Alexander's conquest, or through contact with Roman art, or through both of these influences; and thus the Græco-Indian style was born.

Soon Buddhism spread beyond the confines of India. Its destiny was to wander. In time it died out completely from the land which had given it birth, but was passing like a fire over Asia, kindling and transforming new and diverse races. In Gandhara the flame of enthusiasm burnt fiercely, and then died, as it would seem, of its very excess. In A.D. 404 a pilgrim found five hundred temples in that country, thronged with worshippers. By the seventh century all were in ruins. Meanwhile Buddhism had reached China. In A.D. 67 the Emperor Ming Ti sent across the Himalayas to seek the truth about this religion. His messengers, we know, brought back images with them. During the next centuries many were the Chinese pilgrims who crossed the mountain passes to visit the sacred

ART TRADITIONS IN ASIA

sites. Most famous of these is Fa Hsien, who journeyed, A.D. 399-414, from China through Khotan westward, entered India through Gandhara and Peshawar, visited the sacred sites in the ancient kingdom of Magadha, and returned home over sea by way of Ceylon. This we know from the record he has left.

From China to India Fa Hsien travelled over the great beaten route which was only to be closed in later times by the conquering Mohammedans. By this same route Buddhism had travelled from India into China. It had, we cannot doubt, a transforming influence on the art of the countries through which it passed. In Gandhara it combines with Hellenism to give a new character to the native Asiatic style. Moving east along the chain of oases which border the great deserts, it impresses its genius on the painting and sculpture of Turkestan, but less perhaps in the way of style than in the way of content. The art of Khotan as of the more eastern sites points to the existence of a tradition of painting which seems to have been common to the Asian continent, and may well have flourished in Central Asia before the advent of Buddhism. Passing yet farther north-east, we come to Turfan; and here successive German expeditions have discovered and brought back to Berlin frescoes and paintings on silk and paper which are of great interest, as well as manuscripts of extraordinary importance for the

PAINTING IN THE FAR EAST

study of philology and religion.' These latter throw light on the history of Manichæism and of its founder Mani, who attempted to combine in one religion Christianity, Buddhism, and Zoroastrianism. The paintings show a variety of styles, and affinities now with Ajantâ, now with Gandhara, now with China, while fragments of miniature paintings suggest the beginnings of the rich mediæval art of Persia.

But in purely artistic interest even these discoveries have been surpassed by the wonderful finds of Sir Aurel Stein on his latest expedition. An account of his adventurous and romantic journey has been given in the explorer's "Ruins of Desert Cathay" published in 1912, and the detailed description of the treasures found at Tun-huang and other sites will shortly be given to the world. The immense importance of the paintings brought home from this expedition is that, among a good deal of mere provincial art, there are splendid specimens of the real T'ang art of China, hitherto known only in the most fragmentary way: and several of these are dated. After Sir Aurel Stein, M. Pelliot visited the same rock-temple of Tun-huang and brought away the manuscripts and paintings left by his predecessor, and these are now in Paris.

And so we come to China itself. Though some writers have presumed that Buddhism in this long journey northward and eastward created art as it went, and found in China but rudimentary begin-

ART TRADITIONS IN ASIA

nings which its inspiration at once transformed, I believe, on the contrary, that Chinese art was fully developed before Buddhism brought its new store of motive and imagery. Indeed, the importance of Buddhism as a creative factor in the art of China can be easily exaggerated. The truer view would be that it came to infuse with devotional fervour conceptions already rooted as philosophic ideas in the mental habits of the Chinese.* I shall presently show what evidence supports this view. But first let us see what we have ascertained already.

It must be remembered that the great mass of the new material discovered by the several missions in these regions of Central Asia dates from an epoch (round about the eighth century A.D.) contemporary with the grandest period of Chinese art, the T'ang dynasty: little can be assigned to a date so early as the sixth or fifth century. But it is in provincial localities that the oldest traditions linger; and we cannot doubt that among this material is to be traced the primitive pictorial tradition of Eastern Asia.

Asia in the first centuries of our era we have found to be not sharply divided into self-contained empires, but a continent in which communication was so free that not only the commodities of trade, but the animating ideals of religion, could bring

* An admirable and lucid treatment of the question is given in Petrucci's "Philosophie de la Nature dans l'Art d'Extrême Orient."

PAINTING IN THE FAR EAST

about a fertilising contact between its different races. To assume that the cradle and origin of Asiatic art belonged to any one country of the continent in particular would be a vain supposition, an unprofitable starting-point for inquiry. We must rather assume that there was, in painting at all events, a common Asiatic style, an art of line ; and our aim should be to inquire which of the races of Asia developed this style to finest use and power. It might be natural, in lack of evidence, to suppose that India, which gave to Asia the kindling ideals and imagery of Buddhism, was the land to which we should turn for the noblest creations of art. Yet we are confronted at once by the fact that in creative art, at least if we judge by what survives, India is comparatively poor.

One great monument of Indian painting remains—the frescoes of the cave-temple of Ajantâ, dating from the fifth to the seventh centuries A.D. In a gorge of the Western Ghâts, among magnificent mountain scenery, the Buddhist monks hewed out of living rock this vast temple of many caves, cool in their gloom even when the neighbouring valleys are scorched with unbearable heat. And here on the walls Indian artists painted the scenes of the life and death of Buddha. Darkened and damaged copies from some of these frescoes have hung for long in the Indian Museum at South Kensington ; but the recent copies made by Mrs. Herringham

ART TRADITIONS IN ASIA

with the assistance of Indian artists, which have been lent by the India Society to the same museum, give much better scope for study. The paintings can also be studied in the two large and elaborately illustrated volumes published by Mr. John Griffiths in 1896. The art of Ajantâ is characterised by the strong outline which marks the early Asiatic style ; is bold and broadly massed, greens, reds, and yellow foiled by white ; the figures and faces are animated, there is force and individuality in them, a strong sense of life. We feel that the painters were possessed by their subject ; they worked with fervour and devotion. This, and the scale of the frescoes, the energy of the drawing, the beauty and vigour of many individual figures, make a forcible and imposing impression, even though the composition is often turbid, and we are left with a sense of splendid struggle rather than of mastery. This great group of paintings takes in the history of Asian art the same kind of place that is taken in European art by the frescoes of Giotto and his followers at Assisi.

The same Indian artists, or artists of the same school, were probably the authors of a less important but very interesting series of cave-paintings found in the rock of Sîgiri in Ceylon, an abrupt mass rising from a plateau which was occupied and fortified at the end of the fifth century by the parricide king Kassapa. These paintings consist of about sixteen pictures of women deities

PAINTING IN THE FAR EAST

or queens, attended by maids who carry lotus-flowers in their hands.* The colours employed are shades of yellow, red, and green. But after this date what do we find? Nothing apparently for close on a thousand years! This portentous gap and blank is due, we are told, to merciless destruction. Yet it seems hard to believe that if the art of painting had been an instinctive and dominant passion of the Indian races, some more definite traces should not have survived. But perhaps further evidence is yet to come to light; for the study of Indian painting has been signally neglected, and it is only in the last few years that, owing chiefly to the impassioned zeal of Mr. E. B. Havell and the enthusiastic research of Mr. Coomaraswamy, the characteristics of the later Indian schools have been differentiated from the Persian tradition fostered by Akbar and his successors. In those schools reappears something of the old, far-off tradition of the Ajantâ frescoes.

In India, then, we can follow up no line of continuous growth in pictorial art. It is to China that we must turn.

* See the report of Mr. H. C. P. Bell in the *Journal of the Royal Asiatic Society*, Ceylon Branch, 1897, p. 115. For a note on these paintings I am indebted to Mr. A. K. Coomaraswamy.

CHAPTER III. CHINESE PAINTING IN THE FOURTH CENTURY

IT was long assumed that the frescoes of Ajantâ were the earliest Asiatic paintings known to us. It was assumed that nothing of the pictorial art of China, the third of the three great civilisations which we found met together in Central Asia, had been preserved of a date prior to the time of the T'ang dynasty.

There are, however, at least two paintings which claim to be by the hand of one of the most famous of the early Chinese masters, Ku K'ai-chih, who flourished in the fourth century of our era.

One of these paintings is now in the British Museum, the other was one of the chief treasures in the great collection of the late Tuan Fang, ex-Viceroy of Tientsin. The Tuan Fang picture is a scroll, painted in illustration of a poem by Ts'ao Chih, who flourished in the early part of the third century. It is described in the *Kokka*, No. 253, June 1911; and Mr. Taki, who wrote the article, published at the same time reproductions of two of its three scenes. One of these scenes is very remarkable, and shows—what the ancient bas-reliefs also attest—how early the Chinese genius excelled in mastery of movement. It shows us a goddess

PAINTING IN THE FAR EAST

riding over the clouds in a chariot drawn by six dragons, and the sense of a buoyant rushing through space is inimitably given. The other scene reproduced shows us gods and goddesses floating over earth, with rocks and trees and streams below. The landscape, however, is of a primitive character, as compared with the figures, which are drawn in fine expressive lines.

To judge from these reproductions, which are all that I have seen, the painting, though of extraordinary interest, is distinctly inferior in actual workmanship to the roll in the British Museum.

Since the first edition of this book appeared, this roll has attracted much attention among scholars, and their studies have brought a number of new facts to light. It was at first thought that the scenes represented by the painter were illustrations to a work by a lady known as the Female Historian, Pan Chao. But Professor Chavannes has discovered the actual text, which proves to be a short composition by Chang Hua, a third-century writer, consisting of precepts addressed to the ladies of the Imperial Harem. The true title of the painting is therefore "Admonitions of the Instructress in the Palace."

Incidentally, M. Chavannes has shown that the picture was longer than it is at present: for the first few precepts are not illustrated, and the text relating to the first of the nine scenes is missing.

THE FOURTH CENTURY

And this is confirmed by the fact that the beginning of the roll has a ragged edge, though repaired so long ago and with such skill that only a careful scrutiny reveals it. At the end of the roll is the signature of Ku K'ai-chih. This is certainly a later addition. But the painting also bears, among a great number of collectors' seals, the seal of the Imperial collection. Now this collection was catalogued in the early part of the twelfth century. The catalogue, published anonymously, is known as the "Hsüan ho hua p'u." In it, seventh among the nine paintings by Ku K'ai-chih, is "Admonitions of the Instructress," the exact title which the picture now in the Museum bears on the outside. The picture is painted on a long roll of silk, and at the end of it is a eulogy of the painter, written in 1746 by the hand of Ch'ien Lung, the famous Emperor, who certainly believed in its authenticity, and who could rely on the most skilled connoisseurship of his day. He had the painting remounted, and wrote the label on it in his own hand. "The picture has not lost its freshness," he wrote; and "Of the painter's four works this is the best." Among the many collectors' seals are those of Sung Ch'i, a statesman of the eleventh century, and of Hui Tsung, the artist-Emperor of the twelfth.

When we add that the types, the costumes, and the style of painting are unlike any later Chinese work known to us, there can be no reasonable doubt

PAINTING IN THE FAR EAST

that the picture represents the art of the fourth-century master. Whether it is Ku K'ai-chih's actual handiwork or not, no one can prove with certainty.* If not, it is a very ancient copy. The condition of the silk, repaired many times over with exquisite skill and care, shows that it is of high antiquity, as also that it has been most jealously preserved. Even a copy of a fourth-century painting would be of extraordinary interest; indeed, as a document, of almost equal importance with an original. But that it is a copy is in the highest degree unlikely. The brushwork is confident and spontaneous. The hand that painted it was beyond all dispute the hand of a great master. It is true that in China and Japan great masters have copied their predecessors, but in such cases as we know of the copy is a free one, whereas in this case curious details of dress and ornament are rendered in a way that only a servile copyist could reproduce. But it is time to describe the work itself. It is a roll of brown silk, a little over eleven feet long, a little over nine inches wide. On it are painted nine scenes. The subject of the first is taken from actual history. The story is told that on a certain occasion, when games were being held in the Emperor's presence, a bear broke loose.

* The painting has this year (1913) been reproduced entire in colour-woodcut by Japanese artists, and published by the Trustees of the British Museum. The text issued with the reproduction discusses at length the question of the picture's authenticity, and describes it in fuller detail than can be attempted here.

THE FOURTH CENTURY

It was rushing towards the Emperor, when a lady boldly threw herself in its path. In the painting we see her, a superb figure, with folded arms, confronting the furious animal, which two tall guards step forward to despatch with their broad-bladed spears. The three figures are admirably disposed and brought together, and effective use is made of the straight lines of the spears in a pyramidal design.

Another subject which has a historical basis shows the lady Pan Chieh-yü (of the first century B.C.) refusing the Emperor's invitation to ride with him in his palanquin. "In old paintings," she is reported to have answered, "it is only ministers that we see riding beside their monarch." The other subjects illustrate various maxims and admonitions. One is a toilet scene, in which a maid is dressing her mistress's hair before a round mirror; lacquer boxes lie on the floor beside them. Another, of great interest for the student of architecture, shows a bed-chamber. In another we are introduced to the family circle of the Imperial house. On one side sit the Emperor and Empress, on the other are two children with their nurses; one of them, a boy, is having his hair shaved and shrinks with a rebellious grimace. In the background a tutor is holding up a scroll for a child to read. Domestic harmony is the moral. All through these maxims runs a strong vein of Taoist philosophy, applied to the vindication of polygamy. "No one

PAINTING IN THE FAR EAST

can please for ever. When love has reached its height, it begins to diminish. This is a law of nature to which all must submit." That is the burden of the admonitions.

In the middle of the roll is a landscape. A mountain, wrinkled with fissures, rears up its crags. On a lower ledge are two hares; higher up is a tiger. Belonging to this subject is a man aiming with a cross-bow at a flying pheasant. The tiger is many times too large; there is no sense of diminishing planes, nor of atmosphere. The mountain is treated like the hills in some early Italian pictures. This is noteworthy, because (just as we noted in the case of the Tuan Fang picture) it is the only primitive feature in the work. It precisely bears out the observation of a Chinese critic* of the eighth century, who writes of the landscape of Ku K'ai-chih's period that the mountains were drawn stiffly "like hairpins and combs," and that the figures were made larger than the mountains. This landscape scene, which seems to intrude so incongruously, illustrates the recurring moral. Fortune lifts us up like a mountain, but the fall comes sudden as the recoil of a cross-bow.

For the rest, it is obvious that figure-painting at least had already arrived at maturity. The figures are outlined with a brush in ink, the roundness of forms and folds of drapery suggested by light strokes of grey or red. Sometimes the spaces

* Chang Yen-Yüan, "Famous Painters of Different Dynasties."

THE FOURTH CENTURY

within the contours are left uncoloured, sometimes there is a tint of vermilion, either opaque or diluted. A tawny yellow, a dull green, and a mulberry purple have also been used ; but these colours have sunk into the silk and lost much of their original value. The general effect is of a painting in black, grey, and vermilion red on a background of golden brown.

Both types and costume are remarkable. The ladies are of a taller, statelier elegance than any we find in later Chinese art. They wear flowing robes, from which scarves or ribbons of some light and soft material float and wave in the air. In the thick masses of hair bound up on their heads are two upright ornaments of crimson colour and delicate design ; they look like cups full of springing flames. We note in the toilet scene the refined simplicity of shape prevailing in all the accessories.

In actual beauty of delicately modulated brush-line, sensitively sweet, yet confident in power, no painting of later ages surpasses this. It is suave and tender, yet never soft or weak ; firm and precise, yet never dry. The calligraphic element is there, as in all Chinese painting ; but there is also unusual lifelikeness and humour. How beautifully felt is the action of the hands of the tall maiden knotting up the coil of hair in the toilet scene ! How delightfully realised the boy struggling on his nurse's knees ! How one feels pride, courage, and will in the attitude of the lady

PAINTING IN THE FAR EAST

who faces the raging bear ! How the bearers groan and struggle under the weight of the palanquin bearing the serene Emperor ! We are made to feel all this, and at the same time we feel the painter's enjoyment of pure rhythm in following with his fine brush the wave of the light drapery that streams from the ladies' robes.

An undercurrent of humour and playfulness is perceptible in the work, revealing something of the painter's personality. As a matter of fact we know more about Ku K'ai-chih (it is odd to reflect) than we do about many an English painter of the nineteenth century.

He was a native of Wu-hsi, in Kiangsu. In 364 a Buddhist monastery wanted money. Ku put his name down for a million *cash*. This was thought mere boasting, and he was dunned by the priests. He asked for time, and shut himself up for a month. When the doors were opened, a resplendent full-length figure of the Buddhist saint Vimalakirti glorified the wall, and visitors flocking in wonder and admiration made up the promised sum. Many of his pictures were of Buddhist subjects, but he was especially famed for the spirituality and expressiveness of his portraits. Expression, not merely likeness, was what he aimed at. He remarked himself on the difficulty in portraiture of imparting to his subjects the air that each should have—in short, of revealing personality.

THE FOURTH CENTURY

The bloom and soft modelling of a young girl's face appealed to him less than features showing character and experience. "Painting a pretty girl is like carving in silver," he said; "it is no use trying to get a likeness by elaboration; one must trust to a touch here and a stroke there to suggest the essence of her beauty." When he painted a certain noble character, he set him in a background of lofty "peaks and deep ravines," to harmonise with the lofty, great nature of the man. The thought might be that of our own Watts.

Ku K'ai-chih painted landscapes, though, as we have seen, these were doubtless primitive in style; and also animals. He said of a favourite poem: "It is easier to illustrate the verse, *The hand sweeps the five strings of the lute,* than this other verse, *The eyes follow the flight of the wild goose.* We may perhaps infer from this saying that Chinese art was already grappling with the study of birds in flight and animals in motion, which was to play so potent a part in the painting of the Far East.

What other subjects did he paint? We know at least the titles of several. Among others are these: "A Hermit of Pure Fame," "Three Heavenly Beauties," "The Great Yü Draining the Empire," "An Ancient Worthy," "The Spring Dragon Rising from its Winter Sleep," "Making a Lute," "Tending Sheep," "Eleven Lions," "Tiger and Leopard

PAINTING IN THE FAR EAST

with Vultures," "Goddesses," "A Buddhist Assembly," "Division of Buddhist Relics."

A famous critic, two centuries later, praised Ku K'ai-chih for his fineness of detail and unerring hand, but pronounced his execution to fall short of his conceptions. Some of the titles just given certainly suggest conceptions of poetic force and grandeur, such as the characteristics of the work known to us would hardly lead us to expect. But, as every student of the art of the Far East is aware, the painting of the ancient schools is singularly various in style: the style varied with the subject, for a traditional mode of treatment attached to each order of themes. Some of Ku K'ai-chih's religious pictures may have been in a grand and monumental style, as the story of his painting of Vimalakirti suggests.

It was said of Ku that he was supreme in poetry, supreme in painting, and supreme in foolishness. We may conceive of him as an original nature, careless of the world's opinion, going his own way and rather enjoying the bewilderment of ordinary people at his behaviour. He is said to have been a believer in magic. He was noted for his way of eating sugarcane: he began at the wrong end, and entered, as he expressed it, gradually into Paradise. He had a whimsical, exaggerated manner of expressing himself.

Professor Chavannes, who has been able approxi-

THE FOURTH CENTURY

mately to fix the date of the artist's death as some year after 405, relates some instances of his skill at one of the literary games dear to the Chinese. At a party of friends it was proposed to find an image which should give the most vivid idea of a thing finished and ended. One of the company suggested this : " A fish thrown into deep water ; a bird let loose into the air." Ku K'ai-chih said : " A plain entirely consumed with fire, the last flame of which has died out." On another occasion danger was the theme. One said : " To gather rice with a spear, and cook it on the sword's point." Ku K'ai-chih said : " A sightless man riding a blind horse on the brink of a fathomless lake." This was too much for the nerves of one of those present, the artist's patron, who had weak eyes, and left the room.

Do we even now seem so remote from such an atmosphere as Ku K'ai-chih breathed ? It is the atmosphere of an age of civilised grace, of leisured thought, of refined culture. The artist himself deals in critical ideas. There is a modern tone in his comments on art. He has an Epicurean strain in his nature.

The paintings we have been discussing are not all that we know of the master.

In the temple of Confucius at Ch'ü-fou hsien is a figure of the sage incised upon stone in the year A.D. 1118. This was copied from a painting which

PAINTING IN THE FAR EAST

was attributed by some to Ku K'ai-chih, by others to Wu Tao-tzŭ, the supreme master of the T'ang dynasty. This is of great interest as indicating the relation of these two great painters to each other, and we will return to the point when we come to the T'ang master. But of far greater importance as a document is a book of woodcuts, published during the Sung dynasty after Ku K'ai-chih's designs, called "Lives of the Heroines." It is true that the woodcuts are not very accomplished; but despite the craftsman's intervention we recognise the same essential features which distinguish the Museum painting and the Tuan Fang painting, the same expressive draughtsmanship in the figures, the same mastery in the suggestion of movement, the same contrast of primitive character in landscape accessories.

History and literature fill out the picture of the age. It was a time of revolt from convention. Artists and poets were under the spell of the teaching of Lao Tzŭ, who, as against the social obedience prescribed by Confucius, taught the virtues of individuality and freedom. To this epoch belongs that coterie of men of letters, afterwards so favourite a theme of painting, called "The Seven Sages of the Bamboo grove," who met by moonlight in the woods to regale on wine and song. A famous contemporary of Ku K'ai-chih's, T'ao Ch'ien, was a typical figure of the time and its ideas. He obtained an appointment as magistrate, but resigned it in three months

THE FOURTH CENTURY

because he could not bring himself to receive a superior officer with the recognised ceremonial. "I cannot crook the hinges of my back for a salary," he said. So he retired into private life and devoted himself to poetry, music, and the culture of the chrysanthemum. The poem he wrote on his retirement and return home is a charming piece, and a celebrated classic.*

This reaction to simplicity and nature, the symptom of an advanced not of a primitive civilisation, is reflected in that intimate glimpse of the Imperial family which we have noticed in Ku K'ai-chih's picture: it is naturalness rather than homeliness which distinguishes the group from the ceremonial stiffness usual to courts; there is no absence of dignity in the absence of pomp and parade.

And now let us turn again from these scenes, this life of social charm, of modern elegance and leisured philosophy, to the cave-temple of Ajantâ. We seem to step back to primitive times, certainly to an art which by comparison is primitive. The refined rhythm, the delicate power, the restrained colour of Ku K'ai-chih's brush bespeak a development of the art of painting which the artists of Ajantâ with all their grace and vigour are far from having reached. Moreover, in Ku K'ai-chih there is no trace whatever of any impress from Indian or Græco-Indian art.

* See the prose translation in Giles, "Chinese Literature," p. 129.

PAINTING IN THE FAR EAST

I wish to emphasise this point; because it has been often assumed, as I have already said, that the art of China only rose from a rudimentary stage at the vitalising touch of Buddhist inspiration from India. Buddhism doubtless proved a potent spiritual influence, but it could never have taken so firm a hold in China had the mystic ideas of Lao Tzŭ not prepared the Chinese mind for its acceptance. We note in Ku K'ai-chih a certain lightness of tone, far removed from the fervent religious intensity of the Ajantâ frescoes; and indeed that intensity of conviction and feeling does not seem to have prevailed in the Buddhist painting of China till the time of the T'ang dynasty, when the religion had penetrated far more deeply into the soul of the nation.

To China then, rather than to India, we must turn to find, if not the parent art of Asia, its earliest mature flower in painting. And from this early epoch onward, while the other countries of Asia yield but scattered evidence of their schools of painting, China has left a continuous record of famous artists, and an endless amount of allusion and criticism, which testify to the unrivalled vitality of its schools and their importance in the life of the nation. Religious art is naturally conservative in types and forms and mode of treatment. Hence the union of Indian conceptions and symbolism with the forms of Greek plastic art, which produced what

THE FOURTH CENTURY

we call the Græco-Indian style, leaves its unmistakable trace on the Buddhist painting and sculpture of China and of Japan. But the Greek element can easily be exaggerated. I have quoted already the story, from the Persian poem of the twelfth century, of the competition between the two opposed schools of art, the Greek and the Chinese. I believe that here we have the clue to the right conception. The great original art tradition of Europe has its home in Greece; the great original art tradition of Asia has its home in China. Each race is pre-eminent in its feeling for harmony and rhythm, the foundation of all art.

CHAPTER IV. THE ORIGINS AND EARLIEST PHASES OF PICTORIAL ART IN CHINA

CENTURIES, it is obvious, many centuries, must have gone to the moulding of an art which could produce so mature and so refined a work as this painting of Ku K'ai-chih's.

Legend, indeed, throws back the origin of Chinese painting to 2700 B.C. There is no need to doubt that the art is of great antiquity. According to native historians, it came into existence at the same time as the art of writing; and throughout the history of China the two arts are intimately connected. A fine piece of calligraphy is valued as highly as a fine painting; and what is most prized in a picture is that the brushwork should be as personal to the artist as his handwriting. In either case the strokes should be full of life, an immediate and direct communication of the artist's mood and thought to the paper or silk on which he paints. The typical Chinese and Japanese painting corresponds, in fact, rather to the drawings of European masters; there is nothing in the East like the highly-finished oil-picture, in which the painting is a sort of confection, and there is no obvious revelation of the way in which the pigments got

EARLY ART IN CHINA

to be there. In the early frescoes, however, of the East and the West there is no essential difference.

Bronze vases and incense-burners dating from various periods B.C. still exist, masterpieces of this kind. The sculptural reliefs adorning a mausoleum in Shantung, built in A.D. 147, have become famous through the woodcut illustrations of a Chinese work devoted to them; and they have been treated in an exhaustive monograph by the eminent scholar, M. Edouard Chavannes. More important sculpture seems to have been destroyed by time. But for all evidence of pictorial art anterior to Ku K'ai-chih we must rely on literary record and allusion.

Professor Giles, in his "Introduction to the History of Chinese Pictorial Art," has collected the evidence available. We find a definite mention of portraiture as early as 1326 B.C. But not till the third and second centuries B.C. do references to painting become at all frequent. Already the Dragon is a favourite subject, and pictures of animals were common, but portraiture remains predominant for many centuries. We have noted in the text of the Admonitions illustrated by Ku K'ai-chih the interesting reference to old paintings of emperors in their chariots, put into the mouth of a lady of the first century.

The encouragement of portraiture accorded indeed with the teachings of Confucius, that great and grave moralist of the sixth and fifth centuries B.C.,

PAINTING IN THE FAR EAST

whose code of ethics has sunk so deep into the mind of China. Confucius, like Plato, held that art should serve the State; it should kindle and sustain the patriotic virtues. He attached high importance to the ballads of a nation; and the literature he rescued from oblivion and edited for posterity was chosen and prized for its effect on character. Filial piety was a supreme virtue in his eyes; therefore the portraits of the great men who had gone before were to furnish to each generation a stimulating and ennobling example. Music he also encouraged as promoting harmony between man and man; for the individual was to merge his own desires in the cause of the community. In Confucian theory the empire was one vast brotherhood recognising mutual duties, and the emperor's parental authority was based on nothing but the consent and choice of the people. How far the socialistic tendencies implied in the Confucian ideas could be developed into actual practice is seen in the attempt of a usurper in the first century A.D. to carry out an equal division of land among the whole people. He had already published an edict abolishing slavery. But the outraged nobles rose, and he was killed as he sat, unresisting, in his palace.*

“Better fifty years of Europe than a cycle of Cathay!” cries the hero of “Locksley Hall,” for

* Okakura, “Ideals of the East,” p. 35.

EARLY ART IN CHINA

whom, as for most Englishmen, the name of China is a symbol of stagnation. More knowledge of China's history might have made the exclamation more appropriate to the mouth of a Tory landlord.

The power of Confucius over his countrymen lay, doubtless, in the fact that he represented the national character in a noble and commanding type. He represented what we may call its orthodoxy, its eminent reasonableness, its social instinct, its aptitude for peaceful living, and its genius for order. Yet Confucius does not sum up the whole of the Chinese nature.

Mr. G. Lowes Dickinson's eloquent little book of letters, put into the mouth of "John Chinaman," has justly found many admirers. It has provoked in America the indignation of Mr. Bryan, who supposed it to be really the work of a Celestial pen, and was wroth that an Oriental should presume to indict our Western civilisation. The view adopted in these letters is that China stands for the Confucian ideal and nothing else; and from this standpoint it is, of course, easy to contrast the ugliness and hypocrisies of Europe and America with the harmony and clearness of Chinese life. The letters hold up the success of the Chinese in embodying a sensible and practicable ideal in conduct against the failure of the West to make any reality of its professions of faith in its "idealistic

PAINTING IN THE FAR EAST

religion.” Yet this “John Chinaman,” though he writes such glowing and persuasive prose, is, I think, unjust both to China and to Europe. The solution of the problems of government, the dwelling together of a people in harmony—these are admirable things to attain, but they alone will never satisfy human nature. After all, it is not likely that we shall ever rival ants in this respect. Mr. Dickinson makes his Chinaman write as if all idealistic religions were a mistake, and as if no such impossible aspirations had ever disturbed the serene centuries of China.

Yet listen to the voice of a Chinese sage :

“The Way that can be walked upon is not the eternal Way.”

“Follow diligently the Way in your own heart, but make no display of it to the world.”

“Recompense injury with kindness.”

“Do nothing, and all things will be done.”

These are words of Lao Tzŭ. How different an accent from the reasonable prose of Confucius !

Lao Tzŭ, the mystic, the proclaimer of paradoxes, the man of imagination, the seer, represents the other side of the Chinese genius. From this other imaginative side has flowered all that is most glowing and alive in Chinese painting and literature. And surely it is not least by her painting and her literature that China will live for the world.

EARLY ART IN CHINA

Lao Tzŭ, said to have been born fifty years before Confucius, inspired the reaction of the individual soul against the communistic system of the latter. The Confucian ideas, especially as interpreted by the pedantry which is the besetting weakness of the Chinese intellect, tended in time to harden and to freeze. A revolt was necessary. However, Mr. Kakuzo Okakura has suggestively observed that "in this Eastern struggle between the two forces of communism and individual reaction, the ground of contest is not economic, but intellectual and imaginative."

In all creative art there is a similar contest or dualism. For all art conveys in varying proportions, but inextricably combined, ideas of order and ideas of energy or freedom. In pictorial art we find this dualism expressed, in its rudiment and essence, through the straight lines or regular curves of man's making, and the free lines of nature; the erect tower, the Roman road, contrast with the sinuous stream, the fretted branch, the melting edge of clouds. Perfect art holds the two elements in equilibrium; it satisfies both our instinct for order and our instinct for freedom. At bottom, the tendencies we label Classic and Romantic are based on this antithesis, and the preponderance now of one element, now of the other.

The ideas of Lao Tzŭ impregnated, as may be imagined, but rare and naturally original minds.

PAINTING IN THE FAR EAST

He is traditionally regarded as the founder of Taoism, that popular cult which is chiefly associated with magic rites and exorcisms, and especially with the chimerical pursuit of the elixir of immortality. But as in Taoism the pure authentic doctrine of the sage has been entirely submerged in a wild mass of superstition, Mr. Okakura has proposed the name Laoism as a conveniently distinctive title for the yet uncorrupted teaching of Lao Tzŭ. And in the third, fourth, and fifth centuries A.D. Laoism was a spirit of power.

In the third century we meet with the name of a painter, Wei Hsieh, said to have been the first artist to paint detail, who excelled in "Taoist and Buddhist subjects." The collocation of the names is significant. Buddhism, which by now was taking hold of China, found its adherents chiefly among the followers of Lao Tzŭ. They found in the Indian religion their own philosophy presented in a more developed form. The Buddhist images too were welcomed as those of one of their own gods.

Before long, it is true, rivalry was engendered, and Buddhism had to face bitter persecution. But at first the attitude of Taoism was friendly, and the Indian religion was allowed to take strong hold. Indeed, the special doctrines of the Dhyana, known in Japan as the Zen sect of Buddhism, so

60

EARLY ART IN CHINA

potent in inspiration for the art of the Sung period in China and the Ashikaga period in Japan, derived not a little from the teaching of Lao Tzŭ. So we come to the fourth century, and to Ku K'ai-chih.

CHAPTER V. CHINESE PAINTING FROM THE FOURTH TO THE EIGHTH CENTURY

AN older contemporary of Ku K'ai-chih's is recorded to have painted a picture on white hemp paper. This, according to Professor Giles, is probably the earliest mention of that material. Paintings were usually made with a brush, upon silk, which about the first century had superseded the earlier bamboo and stylus. From now onwards to the present day both silk and paper have been used in China, as in Japan, for painting; but silk has always been the more common material.

From the fourth century to the eighth, though there are interesting monuments in sculpture, we have no tangible monument of pictorial art. Yet history records the names and works of a long roll of painters. To fill these pages with the records, for which the student should refer to Dr. Giles's book, is not my purpose. But it may be well to say something of the various subjects which formed the content of these painters' art, since they will recur again and again in the works of later times.

First we must mention those great symbolic figures which had early taken shape and meaning

Plate II.
Liu Pei.
Traditionally attributed to Wu Tao-tzŭ.
Freer Collection.

FOURTH TO EIGHTH CENTURY

in the Chinese imagination—the Dragon and the Tiger. Both are symbols of power. In the superstition of literal minds the Dragon was the genius of the element of water, producing clouds and mists ; the Tiger the genius of the mountains, whose roaring is heard in the wind that shakes the forest. But in the imagination of poets and of artists these symbols became charged with spiritual meanings, meanings which we should regard as fluid rather than fixed, and of import varying with the dominant conceptions of particular epochs. In the Dragon is made visible the power of the spirit, the power of the infinite, the power of change ; in the Tiger, the power of material forces. When the Tiger was portrayed simply as the royal beast, it was painted in the colours of nature. But when conceived as a symbolic power, it was always painted in ink only, like the Dragon. The two subjects have been painted as a pair of pictures by almost every artist of note who worked in the Chinese tradition, whether in China or Japan.

The Dragon is typical of the creative faculties of the Chinese genius, which had a singular gift for moulding into shapes of vivid and formidable reality those shadowy terrors of the unknown and the non-human world that survive in mankind from the infancy of the race ; not without unconscious actual memory, perhaps, of a time when the monsters of primæval ages still existed. The earliest Chinese

PAINTING IN THE FAR EAST

bronzes betray a power akin to that which inspired such mediæval sculptors of Europe as those who carved the famous gargoyles of Notre Dame. And in the creation of demons and fantastic beasts and birds the Chinese genius is vividly inventive.

The Confucian ideals promoted portraiture, also the exploits of heroes and the classic stories of filial piety. Of these last there is a chosen set of Twenty-four Examples. In most of the stories they illustrate there is an element of childishness and extravagance, and this is probably one reason why these themes do not seem to have provoked masterpieces. Another reason is that imaginative artists were attracted rather by the ideas of Taoism and Buddhism.

Taoism gave to art some of its most romantic subjects. Chief among these are those themes connected with the Rishi or Wizards of the Mountains. These were human beings who had abandoned the world, who abstained from all nourishment but fruits and dew, and who by the practice of certain mystic arts had attained to an ethereal existence and the enjoyment of immortality. They form a mysterious brotherhood, who ride on storks through the air, or traverse the mountains on the backs of fabulous animals, or meet together in mountain retreats. They are pictured as beings of mystery, yet with nothing of the haggard foulness of the European conception of witch and wizard ; their

FOURTH TO EIGHTH CENTURY

genius is one of gaiety and world-forgetting youth. The stork, the tortoise, the pine, plum, and bamboo were their accompanying emblems. With such conceptions the Buddhist Arhats might seem at first to have a not unfraternal kinship. These were the immediate disciples of Buddha, first sixteen, afterwards eighteen, in number—the Chinese call them Lohan, the Japanese, Rakan—and their figures are familiar in every form of the art of the two countries. They too haunt the mountain solitudes ; but theirs is not the careless smile of the wild Rishi : they are rapt in intense meditation, they breathe a spiritual air, they are forms of grandeur and intellectual power. Yet sometimes, when represented in a company, they lose their solemn Indian aloofness ; their aspect takes on something of the genial lightness of the Flowery Land, and we see them crossing the waters of ocean to the Paradise of Mount Horai in the legendary West, where the Faerie Queen, the goddess Si Wang Mu, awaits them with the mystic peaches in her hand, the taste of which is immortality. Here we have in a single subject the blending of Buddhist and Taoist conceptions ; for Si Wang Mu belongs to the supernatural world of Taoism, though originally, as Dr. Giles has suggested, her legend may reflect Greek myth, the goddess Hera, the apples of the Hesperides, and the river of Ocean at the boundaries of the world. Yet normally the

PAINTING IN THE FAR EAST

Arhats are pictured as single figures, each with his attendant lion, tiger, or other guardian emblem, and thus portrayed often strangely recall the hermit saints of Christian art. The first mention of the Arhats in Chinese painting dates from the sixth century.

Endless were the subjects of the Buddhist painters ; for Buddhism, as it grew and spread abroad, absorbed into itself a mass of alien conceptions, and transformed to its uses a hundred forms from the Pantheon of Indian mythology. Moreover, the personification of every varying mood of Buddha and Bodhisattva created through the multiplication of images an ever-increasing array of individual deities.

Here, since it is impossible to suggest more than the outline of so vast a subject, I will merely touch on two points. One is the absence of the dramatic instinct. In the story of Sakyamuni there are moments of moving drama, which the artists of Europe would, one cannot doubt, have eagerly seized on for representation. There is, for instance, that moment when the young prince, brought up in luxury and ignorance of death as of pain, meets outside the gates of his city an old man leaning on a staff, withered and bent. What ails him ? Has he been so from his birth ? asked the Prince, only to learn from his attendants that this was the inevitable end of youth and glorious manhood, the end to which all must come. I can recall but one painting of this subject, by the

66

FOURTH TO EIGHTH CENTURY

Japanese fifteenth-century master, Montonobu, and he treats it but impassively. Think what Giotto would have made of such a theme, or Rembrandt ! Again, there is the moment when at midnight Sakyamuni, resolved to quit the world for solitude, comes to take farewell of his sleeping wife, and his boy, Rahula. He longs to take the child up in his arms ; he stretches out his hands to do so ; but he fears to wake them, and silently goes out. What a subject for Leonardo, for Correggio ! Pictures of it must exist, but I never saw nor heard of one. Yet we should not wonder at this, after all ; for human tenderness, human love, human emotion, are in that high doctrine of Buddha bound up with the rooted evil of individual existence. Therefore the Buddhist painters concentrate their power on types of intellectual peace, every line in whose calm features, in drooped eyelid, in wide forehead bent slightly forward, in unruffled fold of drapery, lays a spell upon the mind, woos it from the restless world, and draws it inward to the divine ecstasy of absolute contemplation. In all the art of the world there is nothing more impressive, nothing of more pure religious feeling, than some of those noblest creations of Buddhist genius. Yet how we miss in the religious art of Asia those consecrations of humanity which form the centre of the religious art of Europe ! Even in the East those human cravings and instincts which have

PAINTING IN THE FAR EAST

been touched to ennobling beauty by the painters and sculptors of Christendom have not been without some outlet of expression ; and the abstraction of Love and Mercy which found form in India as Avalokitesvara, named in China, Kwan-yin, in Japan, Kwannon, is transformed* in the course of time from a male angelic figure to that of a woman. Another deity, Hariti, originally the goddess of small-pox and the devourer of little children, becomes in time (she was converted by the persuasions of Buddha) their protectress ; and her image, with a child on her lap, has been mistaken sometimes by Europeans for an Oriental borrowing of that perpetual theme of Christian art, the sublimation of Motherhood in the Madonna.

The other point I wish to notice is the element of grotesqueness which pervades the Indian mythology, and which was constantly at war with the finer instincts of the Chinese artists. Grotesqueness is not the right word perhaps, for of the true grotesque the Chinese are naturally masters. I mean those symbolic figures of deities with many heads, or eyes, or arms, which are not genuinely pictorial or plastic conceptions, but literal translations of the verbal imagery of which Indian literature is profuse—an origin totally different from that which gave birth to the Chinese dragon, or

* The change appears to date from the twelfth century. Giles "Introduction, &c.," p. 21.

FOURTH TO EIGHTH CENTURY

such European creations as "Le Stryge." Hieratic art preserves its types with little change ; but in the religious painting of China and of Japan, the early productions of which are often almost or quite impossible to distinguish between, there is a visible effort, whether conscious or unconscious, to subdue this inherited element by cunning disposition of forms into harmonious rhythm.

Rhythm, indeed, is recognised as the vital essence of art. It was in this period that the criticism of painting was formulated by a writer who was himself an artist, Hsieh Ho (Shakaku in Japanese), who flourished in the sixth century.

The Six Canons of Hsieh Ho crystallise the conceptions of art which had already long pervaded the minds of his countrymen in a less definite form, and have been unanimously accepted by posterity. First, then, comes rhythmic vitality, or, as Mr. Okakura translates it, "the life-movement of the spirit through the rhythm of things." Next comes organic structure. The creative spirit incarnates itself in a pictorial conception, which thereby takes on the organic structure of life. Third comes the law of conformity with nature ; fourth, appropriate colouring ; fifth, arrangement ; sixth, the transmission of classic models.

Throughout the course of Asian painting the idea that art is the imitation of nature is unknown, or known only as a despised and fugitive heresy.

CHAPTER VI. THE T'ANG DYNASTY

THE main great epochs of Chinese painting are easy to grasp and remember. After the immense tract of time from which no painting is known to survive except one or two single pictures like the roll by Ku K'ai-chih which we have described—whatever may be hidden in Chinese private collections—after this long period we arrive at the T'ang dynasty, extending from A.D. 618 to 905. A short period of half a century follows, known as the Five Dynasties. Then come :

The Sung Dynasty, 960-1280.

The Yüan or Mongol dynasty, 1280-1368.

The Ming dynasty, 1368-1644 ; and finally

The Ch'ing or Manchu dynasty, overthrown but the other day.

The T'ang era stands in history for the period of China's greatest external power—the period of her greatest poetry and of her grandest and most vigorous, if not, perhaps, her most perfect, art. Buddhism now took hold on the nation as it had never done before, and its ideals pervaded the imagination of the time. China was never in such close contact with India ; numbers of Indians, including three hundred Buddhist monks, actively

THE T'ANG DYNASTY

preaching the faith, were to be found in the T'ang capital of Lo-yang. And Buddhist ideas permeate T'ang painting.

Until quite recently, it could not be said that we had any but the scantiest first-hand knowledge of T'ang art. But in the last few years extensive discoveries of sculpture, clay figures, and paintings have brought us a store of material on which some conception of the art of this great period may be founded. It is with the paintings that we are here concerned.

The mass of paintings brought from Tun-huang by Sir Aurel Stein and M. Pelliot have this in common, that they are all (I believe) Buddhist. But in style there is a surprising variety. This is, doubtless, partly due to differences of local schools, but also to differences of date. Actual dates occur on some of the pictures, mostly dates of the end of the dynasty. But among the undated examples are paintings which seem from internal evidence to be decidedly earlier than these: and some of the manuscripts found in the same rock-temple go back to centuries before T'ang. Many of the paintings appear to be of a provincial character; but a number certainly belong to the central Chinese tradition of Buddhist art, which passed on to Japan, and on which the early Japanese schools were closely modelled.

As we should expect, the Indian element is very strong. But in what precisely does it consist? It supplies the elaborate symbolism with which these

PAINTING IN THE FAR EAST

paintings are saturated. We find it also in the ideal of the divine form, which has the slim waist and pronounced hips of Indian heroic art. The formula and prescription, the ritual, the attitudes, are Indian ; the fervent religious mood of contemplative ecstasy is of Indian inspiration. None the less, the Chinese element is also powerful. Many of these paintings have the portraits of Chinese donors below the heavenly vision which they depict. Many, too, are bordered with small paintings, in the manner of the predella pictures of an Italian altar-piece, representing various legends of the former existences of the Buddha ; and it is very noteworthy that here the Chinese element entirely prevails, for the personages, architecture, costume and accessories have become Chinese instead of Indian, just as in Brueghel's " Massacre of the Innocents " (for example) everything is taken from the life of the artist's own time and country. This alone testifies to the powerful vitality of Chinese art. But even in the pictures of the Buddhist Paradise, so frequently recurring in the series, we find an element easily recognised when we turn from them to the frescoes of Ajantâ ; I mean an extraordinary feeling for the music of flowing sinuous line, and of movement in the line, a beauty as of gliding streams or the filmy wave of smoke ascending in the air ; and we are reminded of Ku K'ai-chih's forms, his love of rhythmic motion and his floating draperies.

THE T'ANG DYNASTY

Among those pictures which, as I have said, seem to belong to the main stream of Buddhist art in China, are some of memorable beauty. Now strangely vivid in colour, now richly smouldering, the vision of the compassionate Presences of heaven reappears before our eyes, after so many centuries of oblivion, as long ago, in the days when Charlemagne was filling Europe with his fame, these forms appeared to humble worshippers in the shadow of rock-hewn temples of further Asia with the promise of eternal peace. The Guardians of the Four Quarters of the Universe, demonic figures of fierce energy, maintain the lordship of the Enlightened One ; Kwanyin, in many forms and aspects, looks down with pity on all that suffers and is mortal ; and Amida among the concourse of the blest and the dances of angels, presides over his Western Paradise, where the lotus flowers for ever on the heavenly lake. Mere fragments though these are of the Buddhist art of T'ang, we can build up from them some conception of its grandeur.

Of the secular art, on the contrary, and even of such Buddhist art as can be associated with the great names of the period, we still remain sadly ignorant. Tantalising glimpses are all we have.

The great movement of the eighth century was fostered at the court of the emperor Ming Huang, whose tragic story has inspired endless poems and pictures in later times. A born enthusiast for beauty,

THE T'ANG DYNASTY

tifully is to have a command of the brush such as any painter might envy. We cannot doubt that Wu Tao-tzŭ possessed this union of qualities in an extraordinary degree. After his death an old man attached to a certain temple used to tell how, when the great master painted the aureole of a god, all the people of the place, young and old, educated men and labourers, gathered in crowds to watch him. With a single stroke the aureole was completed, as if a whirlwind had driven the brush: his hand, all declared, must have been guided by a god. We are told that Wu Tao-tzŭ used a fine brush when young, but one of great thickness in middle life. But though his calligraphic mastery was so wonderful, it was his imaginative realism and his tremendous powers of conception that made him supreme. The robes of his angels moved as if the wind were in them. His dragons seemed to shake the air; his men and women breathed, charmed, awed, ennobled. His picture of the Buddhist Purgatory affrighted thousands from their sins. He painted a great picture of Sakyamuni among ten of his disciples. But most famous of all his works was the large composition of the "Death of Buddha," of which more than one version existed.

Alas! of all the mighty works of Wu Tao-tzŭ none now is known certainly to survive. Once, in a dream, I myself beheld them all, but awoke with

PAINTING IN THE FAR EAST

the memory of them faded in a confusion of gorgeous colour, all except one, which remained with me, strangely distinct. A goddess-like form was standing between two pillars of the mountains, not less tall herself. I remember the beauty of the drawing of her hands, as their touch lingered on either summit; for her arms were extended, and between them, as her head bent forward, the deep mass of hair was slowly slipping to her breast, half-hiding the one side of her face, which gazed downward. At her feet was a mist, hung above dim woods, and from human dwellings unseen the smoke rose faintly. The whole painting was of a rare translucent, glaucous tone. May I be permitted the impertinence of this intrusion? since only in dream can we ever hope to see most of those lost masterpieces of one of the world's great artists.

Yet there is something to build our dreams on. A few paintings in Japan have long been attributed to Wu Tao-tzŭ, though modern criticism questions them. There is a set of three pictures, representing Sakyamuni, and two Bodhisattvas, Samantabhadra, and Manjusri. If not by the master himself (and Mr. Tajima, who has published them in his "Select Relics," vol. i., accepts them as genuine), it may well be that these pictures reflect his style. Boldly outlined, the figures betray a latent force and impress as if by a living presence. There is a grandeur and freedom in their form and attitude which later

Plate V.

Sakyamuni.

Artist unknown ; probably T'ang dynasty.
The painting has been attributed to Wu Tao-tzŭ.

Freer Collection.

THE T'ANG DYNASTY

art does not attain. The types of face are rather round, with a certain open largeness of aspect, though the Buddha himself conforms more or less to the accepted type of tradition. Again, a pair of landscapes is preserved in Japan. Their authenticity is much disputed. They represent mountain scenes—tall, upright designs—with torrents plunging among rocks, and trees hanging on the steep crags. They are painted with more vigorous strokes and a less delicate brush than the characteristic landscapes of later times, and have a wild and simple nobleness of their own.

Of the famous "Death of Buddha," painted in 742, we know at least the composition, for Wu Tao-tzŭ's design was repeated by more than one early master of Japan, and the original is described in Chinese books. In the British Museum is a large painting of this subject, by the hand of a great artist of a school entirely modelled on the art of T'ang. Magnificent indeed is the conception. The whole of creation is wailing and lamenting around the body of Buddha, who alone lies peaceful in the midst, having entered into Nirvana, under a great tree, the leaves of which are withered where they do not cover him. Saints and disciples, kings, queens, priests and warriors, weep and beat their breasts; angels are grieving in the air; even the beasts of the field and the forest, the tiger, the panther, the horse, the elephant, show sorrow in all

PAINTING IN THE FAR EAST

their limbs, rolling with moans upon the ground ; and the birds cry. An ecstasy of lamentation impassions the whole work. What must have been the effect of the original ?

In the Freer collection at Detroit is a large full-length figure of the famous Chinese hero Liu Pei, who died early in the third century A.D. It is reproduced in this book. From an inscription on the mount of the picture, written by a great connoisseur of the eighteenth century, we learn that this was originally one of a set of three paintings portraying the three heroes Liu Pei, Kwan Yü, and Chang Fei, who formed a famous brotherhood in arms, and whose feats have been favourite motives in art.

The three figures, as painted by Wu Tao-tzŭ, are known to have been engraved on stone in the tenth century, and these stone engravings still existed in the eighteenth century (perhaps exist still) in an old temple in the province of Ssu-ch'uan. In the opinion of the connoisseur Wang Wen-chih, who wrote the inscription, the picture of Liu Pei, now in the Freer collection, was an undoubted original by Wu Tao-tzŭ. Certainly, though darkened and injured by time, the painting is of extraordinary power and massiveness of design. It is worthy of what we might expect from the master's brush. It would represent his later, broader style.

We have already seen that there exists in China

THE T'ANG DYNASTY

an engraved portrait of Confucius, made after a picture which some ascribed to Wu Tao-tzŭ, others to Ku K'ai-chih. It is recorded, moreover, that in the Sung period the works of these two masters were often confounded. Fenollosa, who only saw the Ku K'ai-chih in the British Museum a few days before his death, had assumed in his book that the powerful "broad-brush" style of Wu Tao-tzŭ was a revival of the style of the fourth-century master. But I think it is pretty certain that it was in his earlier, finer manner that Wu Tao-tzŭ came close to Ku K'ai-chih.

Dr. F. R. Martin, the well-known authority on Persian art, possesses an album of drawings which profess to be Sung copies after originals by Wu Tao-tzŭ. In a case where certainty is impossible, it may be thought rash to pronounce; but to me it seems that the traditional ascription is quite likely to be correct. In some at least of these drawings one feels the tremendous energy of conception and draughtsmanship which all the records tell us was the pre-eminent characteristic of Wu Tao-tzŭ. The reader may judge for himself from the example reproduced.

Another splendid design traditionally ascribed to the T'ang master is the subject of Chung-Kuei chastising a demon. An old version of this exists in Japan in the collection of Marquis Inouyé, and has been reproduced in the *Kokkwa*, No. 230. A

PAINTING IN THE FAR EAST

copy from it, attributed to the hand of the famous Japanese painter Cho Densu, is now in the British Museum (Morrison collection).

Again, in Mr. Freer's collection is a picture, magnificent in design, of a male Kwanyin holding a great fish in a basket and looking down on two children who set lotus flowers in a bowl. This is said by Fenollosa to be a copy from Wu Tao-tzŭ by an artist of the Sung period.

In the Louvre and also in the Musée Guimet are rubbings from stone engravings after a Kwanyin by the master.

The last painting of Wu Tao-tzŭ, according to legend, was a landscape, commissioned by the Emperor for one of the walls of his palace. The artist concealed the completed work with a curtain till the Emperor's arrival, then, drawing it aside, exposed his vast picture. The Emperor gazed with admiration on a marvellous scene: forests, and great mountains, and clouds in immense distances of sky, and men upon the hills, and birds in flight. "Look," said the painter; "in the cave at the foot of this mountain dwells a spirit." He clapped his hands; the door at the cave's entrance flew open. "The interior is beautiful beyond words," he continued; "permit me to show the way." So saying, he passed within; the gate closed after him; and before the astonished Emperor could speak or move, all had faded to white

80

Plate VI.

Portion of a long roll,
attributed by ancient authorities to Li Ssü-hsün.
Freer Collection.

THE T'ANG DYNASTY

wall before his eyes, with not a trace of the artist's brush remaining. Wu Tao-tzū was seen no more.

Landscape, we must note, had by this time risen into prominence and favour. A great advance was made, and the style which had hitherto prevailed was abandoned.

This new movement resulted in the foundation of two distinct schools, the school of the north and the school of the south. This division into northern and southern schools has an important place in Chinese criticism of art. Fundamentally it represented a difference of race and of geographical conditions. The scenery of the great river Hoang-Ho in the north has a character of vastness and sublimity, with immense plains, and mountain ranges rising one above another. The valley of the Yang-tse in the south, with its deep gorges and rock pinnacles, is, on the other hand, romantic and picturesque. The painting of the two schools partook of the same contrast in character, which was not without a correspondence in the temperament of the races inhabiting the two regions. But the division appears to have been more than one of geography; it came to be used as descriptive of a difference of style. A painter, wherever born, could adopt whichever of the two styles was most congenial to his gift, or could work alternately in either. If I rightly understand them, the school of the north aimed at vigour and spaciousness, even

PAINTING IN THE FAR EAST

at the cost of ruggedness, while the school of the south sought rather in the romantic aspects of nature a response to some emotional mood. The distinction, however, has more value for the Chinese than for the European student of painting, especially as so little remains from which he can form a judgment. The founder of the northern school was Li Ssü-hsün. This painter had an extraordinary vogue in his lifetime, and many legends are told of the miraculous animation of his pictures. He painted scenes for the Emperor in rivalry with Wu Tao-tzū. To Li Ssü-hsün is attributed a long roll of landscape in the Freer collection. The fragment reproduced does little justice to the glories of the original, which with its bold and broad opposition of white and green and blue has a most stimulating effect to the eye, and may still prove an inspiration to painters of to-day. The founder of the southern school was Wang Wei.

Wang Wei was a physician; and he was even more famous for his poetry than for his painting. Born in 699, he spent some years in official life, and falling a victim to intrigues was imprisoned for some time by a rebel chief. When he was thirty-one, he lost his wife; and thereafter retired to seclusion and the cultivation of his chosen arts. He was a devout Buddhist, and died in 759. A portrait of the artist by himself is reproduced by Dr. Laufer in the article to which I refer below, from a seven-

THE T'ANG DYNASTY

teenth-century woodcut. It represents him seated in a chair, with his face turned away from the spectator. The attitude seems quite in keeping with the poet-painter's character.

Of Wang Wei it was said that his poems were pictures, and his pictures poems. A proverbial saying about the two arts embodies the same conception, which the Chinese regard as ideal. To interpret a mood, not to record facts, has been for them the essence of landscape painting. In the southern school this principle was sometimes carried to extravagance, for Wang Wei's art was the parent of what is known as the Literary Man's Painting, in later ages to become a paramount fashion, in which the naturalistic element was discarded for a soft and vague idealism. Wang Wei himself was criticised for combining incongruous features in one picture, such as flowers belonging to different seasons. He was defended on the ground that his aim was to realise the spirit, and not merely the outward form. A famous picture of his was of a banana-tree in snow, which was thought an audacious defiance of nature. But in certain districts of China, as of Japan, flowering trees blossom while snow is on the ground, and in later times the combination was a favourite subject for its rare beauty. A late copy of Wang Wei's picture has been published by Professor Hirth.*

* "Scraps from a Collector's Note-book," p. 76.

PAINTING IN THE FAR EAST

It is a sketch in impressionist style. A water-fall, in the same broad, simple, suggestive manner, is reproduced by Mr. Tajima.* It has been traditionally ascribed to Wang Wei, but is generally thought by Japanese critics to be of later date. In the British Museum (gifts from General Sir Ian Hamilton and from Mr. F. E. Wilkinson) are a series of sketches which bear the name of Wang Wei. The silk on which they are painted is certainly ancient, though perhaps not quite so old as T'ang. But even if Sung copies, the sketches are of great interest. The motives are what we might expect from the poetic feeling of Wang Wei: the return of a sage to his country home, where the familiar flowers still climb about the doorway; the delicate-leaved bamboo springing up beside dark rocks; a field full of bare young trees just tipped with flushing buds, and a distant mountain in the mist beyond; an angler happy in his solitude under a willow on the river-bank; an old plum-tree beginning to blossom by a full torrent; a castle built into the sea, where a few sails ride the curling waves and faintly-coloured peaks seem suspended in the haze of the horizon. The painter relies less on inventive design than on the subtle powers of association, choosing just the elements which will evoke the mood which possessed himself.

In the British Museum collection is a long roll,

* "Select Relics," vol. ii.

Landscape.

Portion of a long roll by Chao Mêng-fu,
freely copied from a painting by Wang Wei.

British Museum.

THE T'ANG DYNASTY

over seventeen feet long, painted almost entirely in blues and greens on the usual warm brown silk. The actual painter was the famous artist of the Yüan dynasty, Chao Mêng-fu; but, as we learn from the inscription following the signature, it is a copy of a picture by Wang Wei, and depicts the scenery of the older master's home, the beautiful estate on which he spent the last thirty years of his life. The copy is dated in the spring of 1309. It is one continuous landscape, in which the scenes melt into one another. Such rolls are not meant to be exhibited or looked at all at once, but enjoyed in small portions at a time, as the painting is slowly unrolled and the part already seen rolled up again. No small mastery is requisite, as may be imagined, to contrive that wherever the spectator pauses an harmonious composition is presented. One has the sensation, as the roll unfolds, of passing through a delectable country. In the foreground water winds, narrowing and expanding, among verdant knolls and lawns, joined here and there by little wooden bridges; and the water is fed by torrents that plunge down among pine-woods from crags of fantastic form, glowing with hues of lapis lazuli and of jade; under towering peaks are luxuriant valleys, groves with glimpses of scattered deer, walled parks, clumps of delicate bamboo, and the distant roofs of some nestling village. Here and there is a pavilion by the water in which poet or

PAINTING IN THE FAR EAST

sage sits contemplating the beauty round him. These happy and romantic scenes yield at last to promontory and reed-bed on the borders of a bay where a fisherman's boat is rocking on the swell ; and finally all melts into open sea and distant mountains beyond, lost on the large horizon. It is possible that a philosophic idea is intended to be suggested—the passage of the soul through the pleasant delights of earth to the contemplation of the infinite.

The original of this roll seems to have been the most famous masterpiece of Wang Wei. Some centuries after his time, when presumably it was in a bad state of preservation, it was more than once engraved on stone, as was a frequent practice in China. Dr. Laufer, in a learned and interesting article,* has published portions of rubbings from the stone engraving. From this we learn that the Yüan copy in the Museum is a free version, not only in detail but in style, and not at all a literal copy. The original appears to have been uncoloured. A very early copy, which probably takes us near to the aspect of the original, is in the Freer collection.

Dr. Laufer suggests in his article that these long landscape makimono had their origin in map-making, which at this period was a well-developed art. But surely the form had been long used already for figure-subjects.

* *Ostasiatische Zeitschrift*, April 1912.

THE T'ANG DYNASTY

It is to be noted that, in spite of the idealist tendencies in Wang Wei's art, the treatise he has left on the study of perspective in landscape shows that it was built on a basis of close observation of natural appearances, weather, &c.

Three hundred painters of the T'ang dynasty have left their names and the record of their work to posterity. Alas that we must be content with dreams and with regrets !

Of a few other masters Time has left us a glimpse. Yen Li-pên, whom the Japanese call En-riu-hon, was in high repute for his portraits and for his paintings of the foreigners from Western Asia who brought tribute to the court. A picture of his called "Brushing the Elephant," in which a man with a besom sweeps the elephant's back, while priests look on, seems to have been the prototype of later pictures of this curious subject, versions of which still exist. In the Freer collection is a largely-designed picture of flowers in a vase which is attributed to Yen Li-pên. In the same collection is a fine painting of an eagle, here reproduced, which tradition claims to be the work of Pien Luan, who lived about the end of the eighth century and who was famous for his birds and flowers. Whether such paintings be thought to be actual originals of the period, or versions of originals by later masters, they are of high interest. Another T'ang master, to whom a number of existing pictures are attributed, is Han Kan. Han Kan

PAINTING IN THE FAR EAST

began life as a pot-boy at an inn from which Wang Wei was wont to get flasks of wine to take with him on his country walks. Wang Wei was not always ready to pay his bill, and the boy beguiled the waiting time by drawing men and horses in the dust. The elder artist was so struck with his gift that he gave him money to study. Han Kan became a skilled portrait-painter, and produced many religious pictures also, but devoted himself especially to the painting of horses. The Emperor of the time is said to have had not less than forty thousand in his stables, some of which were sent to him as tribute from Western countries, and Han Kan studied them assiduously. He painted horses being trained for polo, or being exercised, or gambolling in freedom on the pastures of the plains. A famous pair of circular paintings, "The Hundred Colts," is known by a woodcut of the sixteenth century,* and even in this imperfect translation one feels the joyous animation and lifelike energy of the original, no less than the admirable mastery of the arrangement.

In the British Museum is a small painting of a white pony (from the Olga Wegener collection) which Chinese critics have attributed to Han Kan. It is unfortunately much damaged, but enough remains to show the virile delicacy and animation of outline which betoken a master's hand. And it

Collection of Sir William Van Horne, K.C.M.G. Montreal.

THE T'ANG DYNASTY

is certainly a very ancient work, though as to the actual author, who shall say? As with the Yüan painter, Chao Mêng-fu, any very old painting of horses tends to gravitate to Han Kan's name.

In the same collection is a very fine picture which Japanese tradition assigned to this master, though it seems more likely that it is a work of the Sung or Yüan period. It represents a Boy-Rishi of Taoist legend riding on a goat of supernatural size, while goats and rams of small terrestrial breed gambol and frisk around. The Rishi carries over his shoulder a flowering plum-branch, on which a bird-cage hangs. We note the freedom, the nervous vigour of the strongly-outlined drawing, which the Japanese were to study and imitate with such enthusiasm.

Among the paintings of Han Kan was "A Yellow Horse, a Tribute from Khotan." The mention shows in what relation the kingdom of Khotan stood to China. The police notices found by Sir Aurel Stein in the sand-buried cities of that country attest the presence of a Chinese garrison. And though the paintings also found there seem so early and primitive in style, we must remember that they were contemporaneous with the grand creations of Wu Tao-tzŭ. I think, therefore, that in those paintings we may recognise a provincial survival of the primitive Asian style of outline painting from which Chinese painting was developed.

PAINTING IN THE FAR EAST

And if we wish to form a conception of what Chinese painting of really primitive times was like, these Khotan pictures possibly afford the best available suggestion.

But Khotan could produce, we cannot doubt, finer art than the paintings that have been found there. At any rate, one Khotan artist who flourished early in the seventh century is known to fame—Wei-ch'ih Po-chih-na. It is significant, however, that he migrated to China, where he acquired considerable reputation, especially for his pictures of “Western Peoples” and of Buddha. His son, Wei-ch'ih I-sêng, seems to have surpassed him as a painter, and was ranked among the eminent names of the T'ang dynasty. Of these artists Professor Hirth has written in his pamphlet on foreign influences in Chinese art. We cannot tell to what their “influence” amounted, though it is recorded that the Koreans founded their style on theirs, and we know that the foreign element in their work excited interest and attention.

The history of China is the history of a nation which is continually absorbing other races from without, and impressing on them the character of its own civilisation. China has expanded by absorbing her invaders rather than by going out to conquer: her Great Wall was built for no other purpose than to keep barbarians out; to territorial aggrandisement, as such, she has been indifferent.

THE T'ANG DYNASTY

In the same way Chinese art has absorbed foreign elements and influences only to give them its own powerful stamp. The natural tendency of artists is to gravitate towards the metropolis, the centre of most productive vitality within their ken ; and the attraction of China was doubtless irresistible to painters of talent arising in the kingdom of Khotan, which was itself a centre of art, but compared with China was a provincial centre.

In this connection I may mention an incident, cited by M. Blochet in an article on the origins of Persian painting, which leads us to the same conclusion.* At the beginning of the eighth century, a prince in Turkestan having died, his brother Bilgä-Kagan sent to China for artists to build and decorate a temple in his honour. Six artists were accordingly sent from China, who made the temple and painted it with frescoes of the dead chieftain's battles. The recent discovery of frescoes at Turfan by the German expeditions shows that it is still possible to find relics of the art of this period in Turkestan, and some of these may prove to be the work of Chinese painters.†

In general we shall, I believe, be safe in conjecturing that a Chinese influence would be one of style,

* *Gazette des Beaux-Arts*, August 1905.

† Professor Hirth, "Ueber fremde Einflüsse in der Chinesischen Kunst" (Munich, 1896), p. 44, quotes from a Chinese work published in 1365 some particulars on the technique pursued by the painters of Turfan.

PAINTING IN THE FAR EAST

the influence of a paramount centre of teaching and tradition, while foreign influence on Chinese work would show itself rather in subject-matter, whether religious conceptions, motives of decoration, of portraiture and costumes of Western folk, as we know was the case with the two painters, father and son, who came from Khotan.

CHAPTER VII. EARLY PAINTING IN JAPAN

WHILE the ancient empire of China was thus attaining and passing its climax of power and productiveness, a new era was opening in the neighbouring islands of Japan. Nothing is certainly known about the origin of the Yamato race whom we call Japanese. What is probable is that they came as invaders from the mainland in two successive waves, represented by two distinct types among the Japanese of history and of to-day, the descendants of the later invaders being marked by delicate features, oval face, and regular proportions, those of the earlier by a more robust frame, flatter and broader face, and more plebeian features. The Yamato race has kept its original characteristics: brave and essentially warlike in character, it is distinguished by energy and thoroughness, intensity of purpose, courtesy, a passion for cleanness, neatness, and order, and extraordinary sensibility to natural beauty. This last quality of the Japanese has been fostered and intensified by the beauty of their native land. Not only are the features of those volcanic islands arresting and stimulating by their strangeness and variety, the sea-indented coast, the torrents, the

PAINTING IN THE FAR EAST

mountains, above all the pure and peerless cone of Fujiyama, higher than Etna or Teneriffe and as solitary, an inspiring symbol, sacred in art and poetry, hovering a distant and sublime presence in the view of half the nation ; not only in form and character has a country of such scenes power over the imagination far different from lands of sleepy meadows and soft hills and wooded plains, but the atmosphere too of that ocean climate clothes the features of the rocky islands with a changing bloom of mist and colour denied to continental countries equal or superior to Japan in natural grandeur.

To these native qualities we must add an ardent patriotism. The Shinto religion, the vague original faith of Yamato, was in essence a religion of patriotism, bound up with absolute loyalty to the Emperor and faith in the divine descent of the house that has ruled Japan from legendary ages down to the present day.

Such were the original characteristics of the nation which was so profoundly to modify itself by the complete acceptance and adoption of Chinese civilisation. We who have witnessed in our day the swift and thorough absorption by Japan of the civilisation of the West see only a repetition of what happened twelve centuries before.

In the third century A.D. the Japanese became acquainted through books and through learned

EARLY PAINTING IN JAPAN

visitors from the continent with Confucianism ; but the great change came at the end of the sixth century, in the wake of the advent of Buddhism. In a few decades, almost in a few years, society was transformed. It may be that the real cause of the adoption of the Indian religion was the assurance that it had been accepted by the great empire of the continent, for Japan has ever been resolute and eager to prove herself able to acquire the best that the world could offer her ; but its adoption could not have been so fervent and enthusiastic had it not been for the zeal of a succession of notable women, who were empresses, and inspired the whole people with the fire of their own devotion. But the first impulse to the spread of the religion was due to the influence of a great man, the Crown Prince Shotoku, regent under the Empress Suiko, a man of fine intellect and of ardently religious nature, than whom among rulers few in the world's history have won a purer fame ; he is one of the company of kings like Alfred and Saint Louis.

It is with a portrait of Shotoku and two princely youths that the story of Japanese painting* as an independent art begins. The Prince stands between the two boy princes, wearing a cap and ceremonial robes, and with a long sword at his belt. His

* The paintings on the Tamamushi Tabernacle are earlier (sixth century). They are decorative and abstract in style. They are painted in oil, a medium scarcely used in later times.

PAINTING IN THE FAR EAST

arms are folded, and his hands, hidden in full sleeves, hold a wand of office. The two youths are also in ceremonial dress, and with arms also folded turn their gaze in the same direction as the Crown Prince. Their hair is knotted on each side of the face with a ribbon. Japanese archæologists tell us that certain details of the costume cannot date from Shotoku's lifetime. He died in 621. But if not actually from life, the portrait must have been made soon after the Prince's death, within the seventh century. In spite of the primitive stiffness of pose, we feel as if in the presence of living persons. The different character of the two boys is finely distinguished, and the countenance of the principal figure radiates that spirituality, gentleness, power, and intellectual candour to which the story of his life bears witness. The author of this portrait is unknown ; it is generally held to be the work of a Korean artist, but is quite probably the work of a native hand.

We are now on the threshold of a great era in Japanese art and history—the era known as the Nara period, from the name of the capital city of the time, just as later ages are called after the later capitals of Kioto and Kamakura. The Nara period extends from A.D. 709 to 784. Nara, the capital city, with its nine gates and nine broad avenues, its spaciousness and its splendour, was itself a monument to the rapid energy by which

96

(From the *Kokka*).

EARLY PAINTING IN JAPAN

the new civilisation was absorbed. It was especially magnificent in the number and richness of its Buddhist temples. Monasteries and nunneries were built all over the land ; Buddhist prelates, attended by priests and acolytes, supervised the building of bridges, the making of roads and canals. The elaborate ceremoniousness of the Buddhist religion communicated to the court and society a taste for pomp, elaborate costume, and etiquette. The literary amusements of China were introduced : poetry became a rage ; flower-festivals were instituted, when poems were hung on trees among the blossoms ; dancing and music were studied with enthusiasm. It so happens that of the court life of this period we have a unique relic in the personal belongings of an emperor and empress presented after their deaths to Buddha by their daughter, and preserved in the treasure-house of the Totaiji temple to this day. There are the robes they wore, mirrors in brocade-lined cases, swords, bronze censers, lacquered chessboards, the bamboo brushes they wrote with, laid on rests of coral, fruit dishes of white agate, golden ewers of Persian workmanship, musical instruments, and screens. In this wonderful collection of relics of Nara's luxury much is of foreign origin—from China, from India, or from Sassanian Persia. Native art flourished chiefly in the form of sculpture ; but the sculpture of this period

PAINTING IN THE FAR EAST

has never been surpassed by Japanese artists since.

Many painters there were, we know, but almost all their work has perished. The chief monument of the period in painting is the fresco in the temple of Horiuji, which was repaired or rebuilt A.D. 708-715. This is quite Indian in character, recalling the frescoes of the cave-temples of Ajantâ in its grand, strongly outlined figures and in the feeling for character and life which it reveals. Was it modelled upon the Ajantâ frescoes? If so, this would be eloquent and significant testimony to the freedom of intercourse then existing between India and Japan. But the recent discoveries in Turkestan make us doubt whether after all this Indian element was not transmitted across the continent, through China.

Two other relics of the period reveal the beginnings of a more definitely Japanese style in painting. One of these is a set of six screen paintings, called "The Beauties under the Trees." These are outline-paintings, representing single figures each under a tree, with a suggestion of landscape background. The trees and the landscape are not distinguishable from Chinese work, but in the full faces of the women themselves, in the suavity and graciousness of their air, something peculiar to the buoyant and flexible Japanese genius seems already disengaged—a smiling tenderness that

EARLY PAINTING IN JAPAN

yet is serious ; what Dante may have meant, addressing Virgil, *O anima cortese* ; a kind of courtesy of the soul.

Yet here again, as in the second and more beautiful of these two precious monuments of the painting of Nara, what seemed distinctively Japanese may turn out to be merely a slight variation on Chinese prototypes. This other relic is reproduced somewhat crudely in the *Kokka* (No. 85), and with much greater delicacy of tone and colour in Mr. Tajima's "Select Relics" (vol. ii.). It is a "Buddhist Angel," bearing in her hand the jewel of life. This is one of those enlightened spirits, purged of human grossness, purged of the hates, the fears, and the desires of mortality, all the struggle and the suffering attendant on the individual will to live, who hover still on the brink of Nirvana, soon to attain the final blessedness, to lose the self in the eternal Oneness. Only tenderness, a divine compassion, lingers like a soft colouring on the white peace of her soul, as she moves in that calm world above the longings and the strifes of men. The dreams of Buddhism have created no more gracious figure than this, revealing as it does that side of infinite tenderness and sense of brotherhood in all life which constitutes that religion's most universal appeal.

The painting is exquisitely coloured, in tones of subdued richness. What poignant regrets must

PAINTING IN THE FAR EAST

such a relic evoke when we think of all that we have lost of this epoch's painting !

In 794 the capital was removed from Nara to Kioto, and from this year to 1100 extends the age known as the Heian period, Heian being another name for Kioto. Throughout the later part of this era the country was ruled, through the Emperor, by the all-powerful family of Fujiwara ; the first instance of that ascendancy of a clan which has been so dominant a feature of Japanese history.

From the beginning of the tenth century Japan ceased intercourse with China, and the country was closed to foreigners. The energy of the nation was now devoted to assimilating the mass of continental ideas which had poured in upon it with such overwhelming profusion. At the same time the original impulses of the race revived. Now was inaugurated a consciously national tradition in literature and in art. Classics in prose and poetry were produced ; and it is remarkable that some of the most famous works were written by women. It was a woman who wrote the " Genji Monogatari," the long prose romance of Prince Genji, which was to form the subject for innumerable illustrations by painters of every generation. This was the age of the poetess Komachi, of the poet Narihira, famed, like Byron, for his beauty no less than for his poetry. Not only the works but the lives of these two have furnished favourite themes for painting. Narihira on horse-

EARLY PAINTING IN JAPAN

back fording the clear stream of the Tamagawa, or riding across the plain with Fuji towering on the distant horizon, a poem on his lips : Komachi in her glory, the envy of the court, putting to shame a rival poet who had sought by a trick to convict her of plagiarism, honoured by the Emperor, the wittiest, loveliest, and frailest in the court she dazzled ; and then in the days of disaster, old, grey, wrinkled, and in rags, begging from door to door among the peasants, mocked by village boys, or telling to priests of wayside temples the sadness of her heart and the vanity of vanities.

With the ninth century, too, we come to the first pre-eminent name in Japanese painting—Kanaoka, one of the greatest names in all the art of Japan, if we are to accept the unvarying voice of tradition, but alas ! a name only. As has happened to Cimabue in Europe, Kanaoka, to whom formerly any painting of sufficiently imposing antiquity was generally attributed, has now been shorn by modern criticism of all those floating glories, and not a single picture now existing is allowed to be by his brush. It is true that this is the kind of question on which criticism fluctuates. Another generation may swing back to acceptance of a few at least of those masterpieces formerly attributed to Kanaoka. Some among these certainly are worthy of the greatest genius ; for example, the full-length portrait of Shotoku reproduced in colours in the

PAINTING IN THE FAR EAST

Kokka (No. 78), representing the Prince in ceremonial costume, a long rose-coloured robe under an outer garment of dull bronze and black, holding a censor—a portrait of the utmost nobleness and grandeur of design, glowing with solemn colour. This painting is now considered by the majority of native judges to be some centuries later in date. Many critics would pass a similar judgment on the “Waterfall of Nachi.”

This painting is of singular interest as the earliest example of pure landscape in Japanese art. It has hardly been surpassed in beauty by later ages, or in the art of any country. Landscape being so late a growth in Europe, we can show nothing to compare with the almost devotional mood of this picture, so pure, lofty, and remote in atmosphere, so richly simple in design. In its conventions it is based on the T'ang landscape as we see it in the backgrounds and borders of the Buddhist paintings discovered by Sir Aurel Stein.

The portrait of Michizane, reproduced in this book, has passed from Mr. Arthur Morrison's collection into the British Museum. Sugawara Michizane, now worshipped as Tenjin, the tutelary deity of a celebrated shrine, was one of the great men of the ninth century. As the Emperor's minister, he was hated by the Fujiwara, and their intrigues at last succeeded in driving him into exile. He said farewell to the plum-trees in his garden, then blos-

EARLY PAINTING IN JAPAN

soming, in a famous poem: "Though your lord be afar, forget not you the spring!" He is often represented, as in this portrait, holding a flowering plum-branch in his hand and wearing Chinese dress. This particular painting, which is on very old silk, has always been ascribed to Kanaoka, and was for centuries in the possession of the Sugawara family. As in the case of Wu Tao-tzŭ, the great fame of Kanaoka perhaps causes us to conceive of his work, of which we have so little knowledge, as uniformly stupendous in character. But in both cases probably we should find, if these masters' lost works were revealed to us, that they worked in a fine and delicate as well as in a large and sweeping manner. Mr. Morrison has shown in his book that the character of this small portrait agrees with what is known of one style at least of Kanaoka, though it is very possibly an early copy.

In questions like these there is rarely any certain test. *Stat magni nominis umbra*. Kanaoka's greatness may in any case be securely inferred from the works of the school he founded. He lived on into the tenth century; but his exact date is unknown. He painted figures, landscapes, animals, birds, and flowers. He was noted, like Han Kan, for his horses. A series of portraits of sages was painted by him for the Emperor. He was also skilled in landscape gardening, an art introduced from China, which was to develop with extra-

PAINTING IN THE FAR EAST

ordinary enthusiasm and elaboration, as we shall see, in later times.

One painting which is still regarded as a work of the ninth century is a portrait of the priest Gonzo, preaching with earnest intensity shown in attitude and expression, and holding a rosary in his outstretched hand. This painting shows remarkable lifelikeness and vigorous simplicity of design. It is attributed to the hand of Kobo Daishi (774-834), the most renowned of all Japanese saints. Kobo was not only priest, but painter, sculptor, and calligraphist. He studied in China, and brought back with him the tenets of the Shingon sect of Buddhism.

But still grander and more impressive are certain Buddhist masterpieces which also still survive, and which are undoubted productions of the Kosé school, the school which takes its title from the family name of Kanaoka, and which was in fact sustained by the Kosé line for a number of generations, from Kanaoka in the ninth century to Hirotaka in the twelfth.*

Such are the paintings of Samantabhadra and of Manjùsri, the god of wisdom, reproduced in colours in the *Kokka* (No. 65 and No. 109). Saman-

* This is the earliest example of that noticeable phenomenon in Japanese art, the continuance of a tradition of painting in a single family. Later the Tosa and Kano families were similarly eminent. Though the practice of adoption makes hereditary talent seem more common than it actually was, yet undoubtedly in some of these families the flower of genius was continually being renewed and revived in the course of many generations.

EARLY PAINTING IN JAPAN

tabhadra sits, as always, throned on an elephant ; Manjùsri on a lion of symbolic aspect, holding in one hand a drawn sword, in the other the sacred flower. Against the dark background the forms of the Bodhisattvas, mild or severe, appear with a soft radiance, like a presence from the unknown. The fluid lines of form and drapery are of an indescribable sweetness and harmony, as if sensitive themselves with life ; the colour also discloses itself as part of the calmly glowing life within, veined with fine lines of gold, not as something applied from without. Such images as these, of which this early Buddhist has created not a few, images of the infinity of wisdom and of tenderness, not only express the serenity of the spirit, but have in a degree unreached in any other art the power of including the spectator in their spiritual spell : to contemplate them is to be strangely moved, yet strangely tranquillised.

It has been contended by M. Gonse that the early religious art of Japan is nearer to its Indian prototype than anything Chinese. But when M. Gonse wrote, almost nothing was known of Chinese Buddhist painting. The numbers of pictures of early date discovered in the last few years quite disprove this contention. The Japanese followed the Chinese with singular closeness, infusing into their work only a certain sweetness and refinement of grace. In general the Chinese design is more

PAINTING IN THE FAR EAST

vigorous and on a grander scale; the Japanese prefer to work on smaller lines. But this of course is not an absolute rule.

Professor Hirth explained the supposed nearer affinity of Japanese with Indian Buddhist painting by the recorded fact that the Korean school of painters founded their style on that of the Khotan master already mentioned (p. 90), Wei-ch'ih I-sêng; and it is well known that Japan derived the arts of China through Korea. This evidence must not be disregarded; yet as it is certain that the art of T'ang impressed itself directly on the school of Kanaoka, and we cannot doubt that masterpieces of Wu Tao-tzŭ and his compeers and successors were familiar in Japan, the influence of the Khotan artist can assuredly not have been preponderant.

As I have already mentioned, the British Museum possesses a masterpiece of this early art—a representation of the Nirvana of Buddha, based on the great conception of this subject by Wu Tao-tzŭ. Damaged by time and incense smoke as this painting is, parts of it are quite well preserved, and enable us to judge of what the whole once was. I have already, in discussing the work of Wu Tao-tzŭ, described this passionate and magnificent conception. In Anderson's catalogue of the Museum collection this picture is placed among the Chinese paintings (No. 1), and attributed to Li Lung-mien, the great religious master of the Sung dynasty. It is, how-

EARLY PAINTING IN JAPAN

ever, wholly different in style from that artist's, betraying the earlier, more vigorous and impassioned style of T'ang; but it is certainly Japanese, and a work of the time when the schools of Japan were closely modelled upon the T'ang art. It was first repaired, as records preserved within the wooden roller of the picture testify, as early as the fourteenth century; and though some maintain it to be a work of the Takuma school, it has been confidently ascribed by a Japanese connoisseur of learning and authority, Mr. Rionin Kohitsu, to the great master Hiroataka, great-grandson of Kanaoka, and, after him, the mightiest of the Kosé family. The design is well known through the many ancient versions which exist in Koya-san and other Japanese temples. One of these was exhibited at Shepherd's Bush in 1910. Far better preserved than the Museum painting, this was distinctly inferior in intensity of mood and force of draughtsmanship.

In later paintings of this subject, which all follow more or less the original composition, Buddha is painted entirely in gold colour, and with the appearance of a statue. Here it is a human body, wrapped in a crimson robe, and painted with arresting truth. And the same sense for life and nature is seen in the animals mourning in the foreground: they have none of the symbolic or heraldic convention which later painters use, but remind us in their noble realism of the lions and horses of the Assyrian

PAINTING IN THE FAR EAST

friezes. The extraordinary power of the picture, apart from the conception, lies in the expressive force of line-drawing, culminating in the figure of a man who in an agony of grief flings himself backward on the ground. Some of the sorrow-convulsed faces and vehement gestures might have come from an "Entombment" by Mantegna. But the whole glows with an intense and splendid harmony of colour, cut across by the strong brush-lines; pale orange, green, and crimson, and white, and gold, and brown.

The Kosé school, as I have said, derived its inspiration directly from the Chinese masters of the T'ang dynasty, and like them pursued above all things the representation of movement and life-like vigour in a grand style.

Other schools, however, were coming into being. Takuma Tameuji in the eleventh century founded the Takuma line, which, at first an offshoot of the Kosé school, attained an independent manner of its own, not without influence from the contemporary Sung masters of China.

More purely Japanese in character was the Kasuga school, founded at about the same time by Kasuga Motomitsu.

To a European eye the distinctions between these styles seem at first sight hardly perceptible, and indeed cannot easily be expressed in words. It is enough to say here that the growth of these

EARLY PAINTING IN JAPAN

schools implies the gradual grafting of the Japanese delicacy on the vigorous qualities of the Chinese style. By the twelfth century the Japanese character had become fully developed. The Takuma and Kasuga lines coalesced. The name Yamato or National was given to the matured style, though the title by which it was best known in later centuries derives from yet another family of painters—the Tosa line founded by Tosa Tsunetaka in the thirteenth century.

Outside of the temple collections of Japan, the religious art of these schools can best be studied in the splendid series of paintings owned by the Boston Museum.

Though the surviving pictures of this earliest period are all either religious subjects or portraits (and these usually of an ideal character), yet we know from records that secular subjects and landscapes were also among the painters' themes. In fact, like Kanaoka, they followed the masters of China in range of subject as in style.

With the eleventh century, however, we shall come to the beginnings of a new kind of painting, the scrolls (*makimono*), on which were portrayed scenes of court life or scenes of war and adventure. But before quitting the Buddhist painters, we must notice a painter who stands among the most eminent of the religious artists of Japan. Yéshin Sozu belonged to no school in particular, and blended

PAINTING IN THE FAR EAST

both Chinese and Japanese elements in his style. He was author as well as artist; his literary works were published in 150 volumes. He died in 1017, aged seventy-six.

One of the most striking things in Eastern art is the difficulty of tracing any one pictorial conception to its first origin and creator. Especially is this the case with religious art. We see for the first time what impresses us as a profound and original conception, and we say to ourselves, The mind from which this came was surely a great inventive spirit. And then we find that this work, so fresh and so immediately inspired as it seems to be, repeats with only the personal variation of the artist's style or temper an older painting by another master; and that again one yet more ancient; and so back into the mist of time. The truth is, these conceptions seem to be images that have been born out of the imagination of a race rather than moulded by any individual mind.

In the work of Yéshin Sozu, however, we find one august conception which is said to have originated in a vision of the artist's own. It is told that on a mountain near Kioto the priest-painter saw one night a vision of the great and mild Buddha rising between two hills, clothed with autumnal woods; in the air beneath on either side floated two celestial beings, whose robes waved with the movements of their adoration; heavenly flowers fell through

EARLY PAINTING IN JAPAN

the darkness and filled it with strange sweetness. This was the vision which in his ecstasy the painter saw, and as he saw it, so he painted it ; Buddha, a golden figure, greater than the hills, filling the picture with his own unearthly peace, and the angelic figures moving as if to divine melodies. Few paintings in the world surely have in deeper degree the religious sentiment of rapture and devotion.

To Yéshin also must be assigned the conception of another glorious work, the great triptych representing Amida descending with the hosts of celestial beings on a cloud that streams and wavers into the night of space behind like a scarf of glimmering gold. Mild and benignant he looks down upon the earth, while the inhabitants of Paradise play all manner of musical instruments, and perfumed petals softly fall about them. Did the painting convey no import to our minds, yet merely as a design its undulating and mysterious harmonies would affect us like a strain of solemn music. What then must have been the impression on those for whom it was painted, for whose souls, not only for whose senses, it brought the message of welcome and compassion, and attuned world-troubled hearts to the serene spaces of Paradise. Only Fra Angelico among the painters of Europe has this beauty of devotion, this intensity of tenderness.

In the British Museum is a large painting, formerly in the Morrison collection, which came from a temple

PAINTING IN THE FAR EAST

near Kioto, where it was for centuries treasured as the work of Yéshin Sozu. It is on silk of very ancient date, and the drawing of the features is identical with that in the great work just described. This also is a picture of Amida, with two attendant spirits, floating through the night-blue of heaven. The quality and exquisiteness of the gold work, still perfect in freshness, are most remarkable.

Though such noble art was perfected in the Heian period, the history of Japanese life, so far as it centred in the capital and the court, was a history of strange and exquisite corruption. The ferment of religious enthusiasm was subsiding into superstition and the study of magic, into elaboration of paralysing ritual and the pullulation of mythologies. Effeminacy was the fashion. Men used rouge and powder ; they gave way to gusts of hysteric passion and to floods of tears. Ministers of State disowned their functions ; it is recorded of one that he devoted every day of nineteen years to the practice of kicking a football. The armour in fashion had become so elaborate and heavy that in the hour of crisis the Captain of the Guard found himself unable to move a step, and the commander-in-chief could not mount his horse. Writing verses, drawing on fans, burning various kinds of incense, and improvising poems on the scented fumes, hawking, football (in a less violent version of the game than our own) ; these were the only serious occupa-

EARLY PAINTING IN JAPAN

tions. When a pet cat had kittens, a court lady was officially appointed to nurse it. Life was loaded with ceremony, and elaborate decorum masked an entire indifference to morality. As high and strict a canon prevailed in all that belonged to manners and accomplishments as in mere conduct it was relaxed and loose. To a successful costume, to a happily turned couplet, all merely moral offences were forgiven. We are reminded now of Rome under late emperors, now of Provence and the Troubadours.

Of life in the palace at this period we get a glimpse in the scroll-paintings of Takayoshi. In these, as in all the subsequent scrolls of the Yamato school, certain definite conventions are adopted. Interiors are represented not as on a level with the eye, but below it; we look down, as if from the ceiling, on rooms divided by gorgeous screens and on the figures within, equally gorgeous in their stiffly ornate costume. Ladies of fashion would wear twenty dresses, one over the other, the edge only of each undergarment showing, in a series of narrow borders of skilfully harmonised colour; their black hair was unbound and trailed in a long cascade over the shoulders, much admired if it fell to the feet. Their faces, that disown expression, look small and mask-like, the apex of a pyramid of dress. Human bodies seem instruments for the propping up of the costumier's rich work of art rather than wearing clothes

PAINTING IN THE FAR EAST

for the use of moving limbs. The painter, too, was enthusiastically conventional. In representing a garden, he chose a few flowers and trees, and, painting them with exquisite delicacy, made them symbols of nature's luxuriance. Clouds and mist were introduced, for quite arbitrary reasons of composition, as solid bands of gold with perfectly definite outline. A strange and sumptuous art, far removed from Chinese impressionism, as indeed it was in essence purely Japanese. And though we may be inclined to be contemptuous of such painting, let us admit that in delicacy of workmanship as in gorgeous harmony of colour it has its impressive qualities. The principles of design which this style inaugurates persist through Japanese art, wherever it reverts to native tradition. Korin's flowers, Hokusai's clouds, are treated in the same spirit. In the frank use of straight line and angle, which play so little part in the fluid rhythms and curves of Chinese design, we find something symptomatic of the Japanese character, which lends a certain strength of order and decision to a too refined, voluptuous, and secluded art. And soon this style and tradition were to be taken up and transfigured into virile life. For the days of the Fujiwara, and the indolent court of Kioto, with all its fantastic and coloured solemnity, were passing away. Impatient hands knocked at the door ; armed and resolute actors appear upon the scene.

CHAPTER VIII. JAPANESE PAINTING IN THE KAMAKURA EPOCH OF THE CIVIL WARS

WE enter an age of battle and bloodshed. While the court at Kioto was daily more sunk in its childish and forgetful pleasures, the provincial families were acquiring strength, taking into their own hands the powers dropped from an enervated rule, and viewed with increasing contempt the effeminate corruption of the capital.

At the opening of the twelfth century military power was concentrated in two great clans, the Taira and the Minamoto. The Taira at first, under a strong chieftain, Kiyomori, a man without fear as without scruple or feeling, had the predominance. But the struggle was fierce and continuous. The two factions contended for the guardianship of the Emperor's person; for the Emperor, though his sacred dynasty was never deposed and he was still treated with a figment of veneration, was without real power; there were times when he was driven to fly in feminine disguise. At last the Minamoto began to gain the upper hand. They owed a series of successes to their chieftain Yoritomo, one of the great and formidable figures in Japanese history,

PAINTING IN THE FAR EAST

and to the generalship and devotion of his younger brother, the hero Yoshitsune. At the final battle of Dannoura, on the coast, the forces of the Taira were utterly destroyed. In later Japanese art pictures of Yoshitsune in his ship, haunted by the ghosts of his slain enemies, who rise in their hundreds from the sea with threatening and accusing gestures, the very foam of the waves, as they break on the ship's bows, forming into pale clutches of spectral fingers, show how deep the remembrance of that day of drowning and slaughter had burned into the imagination of the race.

Yoshitsune's brilliant captaincy and triumph earned him not gratitude but jealousy and hatred from the elder brother in whose cause he had fought. Yoritomo plotted against him, and set spies to take his life. Yoshitsune escaped in disguise to the north of Japan with a few trusted companions, chief among them the giant Benkei, whom as a youth he had defeated in a famous combat, and who ever after served him with passionate devotion. Pictures and colour-prints endlessly celebrate the deeds and adventures of these heroes, the darlings of Japanese story. The brave and chivalrous Yoshitsune died fighting, or as some say by his own hand, the victim of his brother's hatred.

Yoritomo became absolute in power, though he made no attempt to depose the Mikado from his

THE KAMAKURA EPOCH

nominal sovereignty. He established his capital at Kamakura, which grew speedily into a great city. In 1192 he forced from the unwilling court the concession to himself of the title of Shogun, "Great General." The title has become historic. Henceforward, down to 1868, when the Shogunate was at last abolished, Japan had two masters: the Mikado, supreme in name and sacrosanct in person, but without power; and the Shogun, nominally deriving his office and authority from the sovereign, but in reality treating that sovereign as a puppet and exercising himself an armed supremacy. The Shoguns ruled; but their line was not continuous like that of the Mikados; revolutions were accomplished, ruling houses overthrown, and successive dynasties of Shoguns were set up.

Strong ruler as Yoritomo was, his own house of Minamoto had but a brief spell of power. In the next generation his family lost its supremacy, and another family, the Hojo, took its place. It was during the Hojo rule, in 1274, that Japan was threatened, for the first and only time in her history, with foreign invasion. The great Mongol conqueror, Kublai Khan, despatched an armada to subjugate the Island Empire. But, as with Elizabeth's England, the winds and the waters fought against the invader, and a tremendous tempest sank the ships of the great Khan. Yet relief from this overwhelming danger brought no peace. Japan

PAINTING IN THE FAR EAST

remained torn and distracted till in 1333, after fierce bloodshed and convulsions, the rule of the Hojo was destroyed, and a new house, the Ashikaga, came to power. Strange to say, it was in this time of desperate and incessant battle that, as Mr. Y. Okakura has pointed out,* Buddhism in its deeper sense became finally rooted in its hold on the Japanese spirit. It was as a spiritual discipline that it appealed, a discipline which by steady contemplation of death and all possible disaster, confronting every man at such a time whether he would or no, could lift the spirit above change and calamity, and enable it to meet fate smiling and unsubdued. Like Christianity, Buddhism in its progress over the world developed many diverse characters and assumed a variety of forms. Penetrated severally with the predominant importance of some one aspect or interpretation of the original doctrine, numerous sects came into being. The sect of Shingon or the True Word had been supreme in the Heian epoch ; and the mysticism of that sect, with its emphasis on the pronouncing of sacred charms, was peculiarly liable to the degeneration which popular belief in magic helped on. But during the Kamakura epoch another sect took hold on the Japanese, the Dyâna or Zen sect of " abstract contemplation." The characteristic doctrines of this sect inculcated a high indifference to the

THE KAMAKURA EPOCH

changes and chances of the world ; they bred in its votaries a stoical fortitude and self-control. Hence its appeal to the warrior natures of Japan, an appeal strengthened by the Zen indifference to book-learning, and reliance on personal intercourse and elementary symbolism. Incalculable has been the influence of the Zen teaching in the moulding of the Japanese character, bearing fruit, as we ourselves have seen, to-day. Charity, patience, energy, contemplation, the wisdom and sweetness that ripen from self-conquest ; these were the paramount virtues instilled into the Samurai, the warrior class whose actions fill this epoch with a keen air of daring and devotion. The brutality of war was ennobled by a religious inspiration ; to suffer and to die for others was the Samurai's ideal. Not seldom do we read of famous warriors shaving their heads and retiring from the world ; some even wore a priestly robe over their armour. We are reminded of our own Crusaders. And indeed I think we can understand this age of Japanese history better if we recall what conditions were brought about when the Norman race had assimilated, with Christianity, the arts and civilisation of the South. The Normans, like the Yamato warriors, were high of spirit, supremely energetic, strong of will. In great characters like William the Conqueror we find the same combination of consummate foresight with unscrupulous force that we

PAINTING IN THE FAR EAST

find in Yoritomo, the creator of the Shogunate; the love of art and poetry, the religious devotion, the adventurous deeds, the extravagant chivalry of the Norman knight have all their parallel in the Kamakura Samurai. The life of each has its darker side. In Captain Brinkley's great work we read of cruelties, vices, and effeminacies among the knights of Japan, reminding us vividly enough of the courts and camps of our own Norman kings.

Before the rival houses of Taira and Minamoto had joined in their long conflict, a painter had arisen whose spirited brush was destined to recreate the native school of art. This was a Buddhist priest, named Kakuyu, who rose to be a bishop and in 1138 archbishop in the Buddhist Church. He is famous in art under the name of Toba Sojo, his official title. He died in 1140. Though a bishop, he was a man of the rarest geniality, with a genius for fun and playful malice. His name is popularly associated with the invention of caricature. The comic style of drawing is called after him Toba-yé, and he has left some scrolls filled with drawings of frolicking animals, satirising the ways of the Buddhist monks and clergy.

Frogs, monkeys, and hares are made to travesty the ritual of the priests and the devotions of pilgrims, whether in mere light-heartedness or in condemnation of clerical perfunctoriness and slothful ways I

THE KAMAKURA EPOCH

do not know. Three famous *makimono*, filled with sketches, have been published entire with admirable fidelity by the Shimbi Shoin. Here are drawings of groups of people watching a cock-fight or a tug-of-war between a fat man and a lean, frogs at archery, horses in the meadows, bulls fighting, animals engaged in all sorts of games. Fresh, diverting, and amazingly modern as these drawings are, they are not the whole of Toba Sojo's achievement. He painted solemn subjects like the Nirvana of Buddha. But his great importance in the history of his country's art is his invention of dramatic painting. It was Toba Sojo who inaugurated the style of swift and vigorous figure-drawing applied to scenes of actual life, which answered to the high and gay spirit of the Japanese race. Nothing in Chinese art (so far as we know) afforded a parallel or pattern for the amazing life and energy which he and his successors show in handling crowds of figures. In one of Toba Sojo's scrolls, devoted to the life of a famous priest, a crowd of people witnesses a miracle, the bodily uplifting of a building into the sky. How swiftly and how powerfully he seizes the varying expressions of the people: the frenzy of wonder, the grimace of stupefaction, the exultation of the devout!

The same gift in perhaps even greater force appears in the scroll-paintings of the next great master of the period, Mitsunaga. A son of the

PAINTING IN THE FAR EAST

ancient and potent house of Fujiwara, Mitsunaga enjoyed immense fame in his lifetime. He received a commission from the Emperor in 1173, but almost nothing is known of his career.

A typical scene from Mitsunaga's brush is reproduced in the *Kokka*, No. 182. The gate of the palace has been set on fire, and before it stands a hesitating and alarmed multitude, paralysed by the spectacle of the rushing and swirling flames, which are fastening on the woodwork and scatter burning splinters at their feet. Divided counsels possess them: some would be running, but the flames bewitch them; others give commands, which no one hears. Their bodies are alive with movement or tense inaction; their very hands talk, their faces grin with excitement.

A native critic, Mr. Sei-ichi Taki, has chosen this painting of Mitsunaga's to illustrate* an essential characteristic of Japanese painting: the tendency to find its subject not in a single central object, but in the mutual relation of figures or objects. Stress is laid not on forms but on ideas. The criticism is a subtle and suggestive one. For though in European art we are accustomed to compositions with numerous and crowded figures, it is certainly the exception for these figures not to be grouped in convergence on one central figure or group. This convergence obeys the instinct for

THE KAMAKURA EPOCH

unity which is inherent in all artistic creation. In these dramatic scenes of Japanese painting the unity is not formal and obvious, may appear even to be lacking ; but the same principle of a mutual relation conceived of as the unifying factor is to be found also in the Japanese designs of flowers and birds. In fact, we must recognise that at bottom it is landscape which controls the type of Japanese, as of Chinese, painting. Figures and groups are treated as parts of a landscape might be treated. We are dealing with an art which differs from European art, as we have said before, in the absence of that concentrated attention on the human form which is at the core of Western painting.

Yet in drawing the figure, what could be more expressive of the capacities of the body for movement, force, and animation than the brush of Mitsunaga ? Those who know the pen drawings of Rembrandt will recognise a kindred power in Mitsunaga of creating the living, acting, suffering presence of human beings by a few summary strokes. True, there is a certain trace of the calligraphic element in the Japanese master which is entirely absent in the Dutchman ; this and the sense of suppleness, alertness, and fire in the brush-line ally Mitsunaga's drawing to that of Leonardo. Yet, on the other hand, the profound and pervading Italian sense for ideal beauty of form that lives in every sketch of Leonardo's is alien to the art of

PAINTING IN THE FAR EAST

Mitsunaga, who, like Rembrandt, accepts humanity in all its various common types.

In another scroll of Mitsunaga's we have pages from the contemporary life of the court, which illustrate in their way the over-refined, exhausted temperaments produced by the times. So in an odd scene we see a neurotic patient lying in bed, while creatures of his feverish dream, little gnome-like figures, troop in to visit him.

But the tremendous imaginative power of the painter is best seen in the scroll which portrays the terrors of hell. Here are nude figures, almost unknown in Japanese art (though treated finely by some of the Ukiyoyé masters in their colour-prints), treated with extraordinary expressiveness and force of line.

With Toba Sojo and Mitsunaga may be ranked two other masters who stand pre-eminent above the artists of the period, Keion and Nobuzane.

Like Mitsunaga, Nobuzane belonged to the noble Fujiwara clan. He was equally renowned for his poetry and for his painting, and his portraits of poets are among the pictures attributed most securely to his hand. He was born in 1177, and lived to 1265. Among the works which tradition calls by his name are *makimono* of court life, following the conventions of Takayoshi's design, but adding the vigour and expressiveness of drawing which Toba Sojo had introduced. And with this

THE KAMAKURA EPOCH

Nobuzane united the glow of a subdued but splendid colouring, which no artist of his race has surpassed ; strange harmonies of deep lapis-lazuli and orange, and opaque green, fawn colour, black, and gold.

In his portraits he used lighter tones ; they are drawings rather than paintings. They show an intimate sense of character. One of these portraits is now in the British Museum ; a small painting of a poet. But the crown of Nobuzane's achievement, one of the supreme classics of Japanese art, is the ideal portrait of the famous priest and saint, Kobo, represented as a boy kneeling on a lotus dais, with hands joined in prayer. Here we are far from any Indian symbolism such as for our eyes mars with its monstrous features, however disguised and subdued, so much of Buddhist painting in China and Japan. It is the simplicity of direct vision, as if the poet-painter were actually transcribing on the warm brown silk the definite features of a vividly remembered dream, which has created this pure image. Without material surroundings, set on the symbolic lotus, sacred in Eastern art as the flower which from mud and ooze rises to unfold unsullied blossoms on the peaceful water, type of the soul aspiring from the muddy passions of gross nature, the figure of the young saint might have been a merely hieratic form. But Nobuzane's profound feeling has filled it with a real humanity that has power to touch us : its innocence is not

PAINTING IN THE FAR EAST

mere ignorance, deriving charm and pathos from our knowledge that it is soon to be destroyed, it is a positive purity of the spirit that we feel will endure beyond experience. In Reynolds's "Infant Samuel" it is the charm of a child's sweet docility and trust that informs the sentiment of the picture. But Nobuzane lifts us into a rarer, a severer atmosphere. In the young face is foreknowledge :

O meek anticipant of that sure pain
Whose sureness grey-haired scholars hardly learn !

What mood, we may ask, is his ?

Some exile's, mindful how the past was glad ?
Some angel's, in an alien planet born ?

Not these ; for though there is the gravity of foreknowledge, there is also the intensity of a pure will ; there is, in Dante's deep and haunting phrase, the "beginning of peace." The world, as Nobuzane symbolises in the enclosing circle and in the emptiness of background and surrounding—the world has fallen away, does not exist, for that isolation, in which prayer is a state even more than an act of the soul.

As a painting this picture is of strange beauty, with its unfretted simplicity of design, its delicacy of drawing, its imaginative colour. And its beauty is of a different type from that of Chinese painting,

Plate XVI.

Scene of Civil War. Soldiers firing a palace.

Portion of a scroll-painting.

By Keion.

Boston Museum.

THE KAMAKURA EPOCH

as it is still more different from that of European painting. It is a new, rare flower in the world's art.

We pass from Nobuzane to the fourth great master of the period: Keion. The existence of this artist has been denied, I do not know upon what grounds. He is said to have flourished in the thirteenth century, and to have been attached to the Sumiyoshi shrine.

In any case, there exist three famous *makimono*, two of which are in private possession in Japan, while the third is in the Boston Museum. They are by a single artist, and it is with him, whether his name be Keion or another, that we have to deal. They depict scenes of the civil war, when the strife between Taira and Minamoto raged. Never surely has the excitement of movement and action been portrayed with such amazing energy as in some of these splendid scrolls.

In his own way Keion is the greatest of Japanese draughtsmen. At a time Kiyomori, the Taira chief, was absent from Kioto, the Minamoto invaded the court and set the palace on fire, hoping to seize in their turn the sacred person of the Emperor. Disguised as a woman, the Emperor was smuggled into an ox-cart. Keion has painted the scene, when a group of armed Minamoto, arriving in the courtyard, surround the ox-cart: one holds up a smoking torch, others roughly pull aside the

PAINTING IN THE FAR EAST

curtains of the hood and exclaim with disappointed anger at finding only a woman. The men are alive : we can hear the stamp of their feet ; we can see their swift and menacing gestures. But the full measure of Keion's power is seen rather in another scene from the Boston scroll, the " Flight of the Court." What a fury of fear, what a riot of speed, in the headlong flight of the men, in the mad race of the ox-carts, some of which are overturned in the wild onrush ! Could even Rubens have given us a more overwhelming impression of energy and despair, of terror and of tumult ?

Toba Sojo, Mitsunaga, Keion, Nobuzane : these are the greatest masters of their period and of the whole Yamato school. But they are the greatest among a host. Korehisa approaches Keion in the fierce vigour of his battle scenes : there is more than one copy from a famous scroll of his in the British Museum collection ; Takakane rivals Nobuzane as a colourist ; he is a master of strong harmonies of lapis blue and vermilion, white and gold, and green, a summary and decisive draughtsman. And these are only a few among many pre-eminent names. This is one of the greatest periods of Japanese painting, one in which there is no influence of Chinese ideals. Yet to Europe it is practically unknown. With the exception of the one Keion scroll at Boston, all of these masterpieces are in Japan, in the hands of noble families, in

128

THE KAMAKURA EPOCH

collections that no traveller sees. It was inevitable that M. Gonse should have passed them over, for at the time when he wrote his book there was no means for a student, unless provided with most unusual influence and facilities in Japan itself, of knowing of their existence, except from native books. It was inevitable too that Dr. Anderson should depreciate the whole school, which he judged chiefly by later, degenerate works and by copies. Indeed, it is only by the wonderful reproductions published in Japan that students are now able to realise how glorious and how significant a period this was, and to understand why Japanese connoisseurs prize the master works of the early Yamato painters above all other paintings of their country.

With the end of the fourteenth century the school began to decline ; and though great painters of the Tosa line arose in this and the succeeding century, there was soon to come a strong reaction in the form of a renaissance from China. A new era in art was at hand, with a different ideal and a totally different style ; and the masters of this new era derived their inspiration from the works produced in China, while Japan was absorbed in her own national problems and internal struggles, under the dynasty of Sung. It is to China that we must now return.

CHAPTER IX. THE SUNG PERIOD IN CHINA

IN a lecture delivered at Oxford, which has never, I think, been reprinted, Matthew Arnold discussed the Modern Element in Literature. He took for illustration the contrast between the words with which Thucydides opens his history and the words with which Sir Walter Raleigh opens his. The Athenian, he points out, has the modern tone, the modern conception of history, while to the Elizabethan the world is still a theatre of romance, where fact and fable are admitted on equal terms.

What, in effect, do we imply by this word modern? We mean, I think, by a modern age, an age in which the interests of the race have passed beyond dependence on the struggle for existence; in which the mind is free, has found a clue to life, and can disinterestedly review and estimate the forces operating outside itself; in which the state of society has emerged from a state of warfare, such as the wearing of weapons implies, to a state of civility and amenity.

The age of Sung has this modern character, if we are to judge it by the art it has left.

We left China at the opening of the tenth century. The T'ang dynasty fell in 907. Between that

Plate XVII.

Women and Children on a Terrace.

Attributed to Chou Wên-Chü.

British Museum.

THE SUNG PERIOD IN CHINA

time and the establishment of the House of Sung there is a short period of fifty years, in which five brief dynasties rose and fell; a period of trouble and unrest. Of the art of this time we know little. A delicate fineness of style is said to have been a characteristic of the period, in reaction from the largeness and vigour of T'ang. A recent acquisition of the British Museum is a small oblong painting, mounted as a *makimono*, which came from a private collection in China and which was certified by a well-known painter and connoisseur of the thirteenth century as the work of Chou Wên Chü. This painter flourished in the first half of the tenth century, and was famous for his pictures of women. Our painting, of which a portion is reproduced, represents groups of women and children on a terrace by a lotus-pond. In a basin at one side a child is washing melons: a woman cuts a melon for some elder children, and another woman, with a baby in her arms, holds out a toy to a small boy who is being washed in a basin at the other side. The curious and deliberate symmetry of the grouping belongs to the early type of Chinese design. It is a work of great charm and character.

The Sung dynasty reigned from 960 to 1280; three centuries of splendour for art and literature, though of gradually waning power for the empire, owing to Tartar encroachments from the north.

Whoever wishes to obtain some conception of

PAINTING IN THE FAR EAST

the external aspect of Chinese life at this period cannot do better than read Marco Polo's description of the Sung capital, Hang-chow, upon the Ch'ient'ang river ; a city even then, when its heyday was over, " beyond dispute the finest and the noblest in the world." He tells of the vast compass of the city ; of its canals and twelve thousand stone bridges ; of its twelve guilds of handicrafts, with their many thousands of workmen each ; of the merchant princes, who lived " nicely and delicately as kings," and those " most dainty and angelical creatures " their wives ; of the great lake, some thirty miles in circuit, within the city, its shores studded with palaces, abbeys, and churches, and on each of its two islands a vast mansion royally furnished, free for the use of any citizen who desired to give a wedding-feast or other entertainment ; of the numerous police ; of the three hundred public baths of hot water ; of the ten principal markets, filled with stores of fresh fish, vegetables, and magnificent fruit ; of the throngs of house-boats and barges on the lake, and of carriages in the streets.* The citizens, Marco tells us, were of peaceful character, neither wearing arms nor keeping them in their houses. You heard no noisy feuds or dissensions of any kind among them. Their goodwill and friendliness was not confined to their dealings

* In the Freer collection is a roll which gives a panoramic view of Hang-chow, as it existed in Sung times.

THE SUNG PERIOD IN CHINA

with their own countrymen; they were equally cordial to foreigners, entertaining them "in the most winning manner," and giving them help and advice in their business. In the palace grounds of the Emperor were delectable gardens, shady with fruit trees, cool with fountains, a demesne enclosed by ten miles of battlemented wall; and in the many spacious halls of the palace itself were paintings on a gold ground of beasts and birds, warriors and fair ladies, and marvellous histories.

Would that the Venetian, so curious of manners and customs, so observant of facts, had found means to tell us of the inner life, the animating thoughts of the poets, philosophers, and artists, which informed so splendid and mature a civilisation! It is true that when Marco Polo came to China the Sung dynasty was at an end; but in Hangchow and the south the soldiers of the conquering Mongol were no more than a garrison, hated by the inhabitants, and the glory of Sung had not yet wholly departed. Had he questioned "the idolaters," as he terms them, he might have transmitted to us Platonic discourses from the votaries of Zen, that sect which in the Sung era came to inspire and give significance to so much of its art and literature, and, as we have already seen, passed on to even greater power in Japan.

As Wu Tao-tzŭ to the age of T'ang, so, at least in fame, is Li Lung-mien to the age of Sung: great

PAINTING IN THE FAR EAST

in all branches of art, but of especial originality and power in his religious paintings. He is renowned in Japan as Ri-riu-min. He served for thirty years in official posts, but whenever he could get a holiday he would take a flask of wine, we are told, and go out into the woods, and spend the day on some rocky seat beside a running stream.

Painting was a passion with him ; even in old age when racked with rheumatism he would make as if he drew upon the bed-clothes with his crippled hand. In his youth he was famous for his pictures of horses, and would spend hours watching the horses in the Imperial stables. A Buddhist priest even rebuked him for this preoccupation, and warned him that in his next metempsychosis he might find himself in a horse's body. His later years were devoted to the religious masterpieces on which his fame chiefly rests. In 1100 he retired to the Hill of the Sleeping Dragon, from which he took his fancy name Lung-mien (his real name being Li Kung-lin), and died there six years later.

Among this master's greatest works was a vast painting of the " Five Hundred Disciples of Sakya-muni " ; and he painted several notable pictures of Kwanyin, the Goddess of Mercy. But with Li Lung-mien we come to a perplexing problem ; and that is the strange divergence in regard to him between Chinese and Japanese tradition. The Japanese tradition attributes to him a number of

THE SUNG PERIOD IN CHINA

paintings of Arhats, magnificent alike in colour and design. Such are the series of sixteen paintings in the Freer collection, one of which is here reproduced. It is on this type of picture, represented also in the Boston Museum by a group of paintings formerly in the Daitokuji Temple at Tokio, that Fenollosa founded his enthusiastic estimate of the master as one of the supreme names in pictorial art. The enthusiasm evoked by the works was justified ; but are these the works of Li Lung-mien ? According to Chinese records, that master never painted in colour except when copying older pictures ; and the paintings which pass under his name in China are of a totally different type. They are ink-paintings, in fine, sensitive line, small in scale, rather intricate, often, rather than broad and telling in composition. The subjects are generally Arhats in landscape surroundings ; but a favourite theme for a series of designs, existing in many versions, is " The Tribute Bearers," in which diverse types of the more western nations of Asia are depicted. Liveliness and humour are more salient features than intensity or grandeur. Mr. Freer has collected in China a considerable number of paintings of this type, works of varying quality, some doubtless originals, others more or less ancient copies. We cannot doubt that in this type of work we find the authentic vestiges of Li Lung-mien. The type is represented also in European collections. A

PAINTING IN THE FAR EAST

roll, which claims with some reason to be an original, is in the possession of Dr. Bone of Dusseldorf, who has published portions of it, with an essay, in the magazine devoted to Asiatic lore called *T'oung Pao*.* This also is a painting of Arhats. In the British Museum are two copies of a roll-picture of the "Sixteen Arhats crossing the Sea to Paradise," the original of which must obviously have been of strange beauty. In the same collection are two variant copies derived from another original roll which represented a curious subject: Demons attacking the bowl in which Buddha had placed the demon-mother's favourite child. The Musée Guimet in Paris has published another version of the same work. This type of Li Lung-mien's work is recognised in Japan. But side by side with this type the Japanese have for centuries placed, as also from the master's brush, the quite different type seen in the Freer series of Kakemono and in such pictures as the Arhats reproduced in the *Kokka*, Nos. 20 and 41.

These other pictures are certainly by a great master. They are works of great majesty, in which the force of the T'ang style is subdued and sweetened by the research for harmony of rhythmic line; the kind of change we experience in passing from a Signorelli to a Raphael; though the figures of the Arhats retain, in spite of the suavity of the artist's

* *T'oung Pao*, Série ii. vol. viii. No. 2.

Plate XVIII.

An Arhat with a Lion.

Artist unknown. Sung dynasty.
Formerly attributed to Li Lung-mien.

Freer Collection.

THE SUNG PERIOD IN CHINA

brush, a superhuman grandeur and impressiveness. These pictures are remarkable too for original and noble colour. To whom are we to ascribe them? The attribution to Li Lung-mien has now been generally discarded both in East and West, though I cannot help regretting that we can no longer associate such splendid paintings with the master whom renown makes the supreme name of Sung.

To whatever masters are due these and other grand paintings of single Arhats, seated in their rocky haunts and alone in contemplative ecstasy, which belong to this era, though perhaps to a rather later time than Li Lung-mien, they are among the noblest creations of the Sung genius. Images of intense and concentrated thought, conceived in a rhythm of fluid lines, that play against severe or broken forms, they betoken an era of climax and culmination.

But the special genius of the period is seen rather in landscape and in subjects allied to landscape, the pictures of birds and of flowers.

We have seen how even in the fourth century, though landscape art was in a primitive stage, it was a passion with the Chinese to escape from the city, its irksome conventions, its noise and dust, to forest, hill, and stream. The mysticism and the legends of Taoism gave to this native instinct a sort of religious colour, which Buddhism, with its monasteries always built in mountain solitudes,

PAINTING IN THE FAR EAST

further deepened. The romantic feeling for nature (escape from routine being of the essence of romance) developed with the Sung age into a more intimate emotion, such as we do not find paralleled in Europe till the coming of Wordsworth. The peculiar mode of thought which tinges the verse of the English poet is indeed thoroughly congenial to the poets and the artists of Sung. Them too the mountains "haunted like a passion." But instead of being part of a single writer's idiosyncrasy, the conception of nature was a permeating thought of the age, explicit in the doctrine of contemplation taught by the Zen sect. Under the reign of Sung this doctrine found, as I have said, its first great manifestation in art.

Kuo Hsi, one of the greatest of all Chinese landscape painters, published an essay on landscape, in which we find side by side with the passionate feeling for nature a Confucian strain of thought. Though we may long, he says, to yield to our instinct and fly from cities to the woods and wilds, to the hills and the musical streams in which the soul of man delights, yet we ought not to disown society. Here is the boon of the painter's art, that in the midst of care and toil it can liberate the mind and bring it into the august presence of nature. Liberation was indeed the keynote of this Sung art. It loved the "far-off effect." Kuo Hsi in his essay insists on this as necessary to unity. The painter

THE SUNG PERIOD IN CHINA

must have varied experience, must build on incessant observation, he says, but above all things he must seize essentials and discard the trivial. He lays stress on the rendering of aerial phenomena and effects of gradual distance. The result of such researches produced a divorce between the hitherto associated arts of painting and calligraphy. The Sung landscape is built up of tones rather than of lines, though even now there is no attempt to suggest the solidity of objects otherwise than by forcible silhouette. The artists worked almost entirely in monochrome ; and they chose for subject all that is most elemental and august in nature, visions of peace or storm among the great peaks and immense distances of the mountains, plunging torrents, trembling reed-beds, moonrises over promontory and sea, the wild geese flying in the autumn sky, the willow loosening the soft streamers of its foliage to the warm winds of spring.

The method of presentation was what we now call impressionism. But we must distinguish between the impressionism of the East and the impressionism of Europe. In Europe the theory at least of impressionism is based on scientific fact. Our eyes, it is argued, are not capable of seeing any given scene in all its detail at once ; they are focussed on a single point of sight ; and in order to render the whole field of vision in equally elaborate detail, as it is rendered in the Pre-Raphaelite

PAINTING IN THE FAR EAST

pictures, the eye must travel from one point to another. It was characteristic of nineteenth-century Europe to appeal to the authority of science rather than to the artistic principle of unity. No such appeal was in the minds of the Chinese painters. Their method was the natural outcome of the conception of landscape as a means of expression for the artist's mood or emotion. Nothing matters but what concerns our own minds. In ourselves is the true reality. In the life of things the artist sought to illuminate and to realise his own soul.

In later times this strong bent of idealism brought about degeneration. But the Sung artists had not discarded the study of nature nor the inheritance of swift and strong draughtsmanship with the brush bequeathed by the T'ang masters; their art was finely balanced; and so it comes about that their pictures of landscape, birds, and flowers appeal to our eyes as marvels of vigorous and delicate naturalism, though we shall be far from understanding their whole import or true inspiration if we regard them as nature studies merely.

Landscape painting, however popular, we in Europe feel to belong to a category of less rank and importance than figure painting. This is not merely a prejudice; for, according to our Western conceptions, that type of art is the greatest which, *ceteris paribus*, commands the fullest scope and is capable of widest range. Landscape in our view is less significant to humanity.

THE SUNG PERIOD IN CHINA

The Greeks divided poetry into epic, dramatic, lyric, and elegiac. Of these types the two former rank higher because they contain more ; they present life more adequately to its reality, richness, and variety. And we demand of the epic poet and the dramatist that his conceptions should accord with the main conceptions of life inherent in his race. For the lyric or elegiac poet it is enough if he express with power and sincerity a view of life quite personal to himself. In the domain of painting, landscape may be compared to lyric or elegy. The materials of landscape lend themselves more easily than any other materials to the control of an artist's mood ; they accept the impress of his feeling more readily.

Turner alone of European landscape painters could give his themes a wider mental horizon and what we may call the epic tone ; but this was by the choice of themes in which national sentiment could be expressed or reflected, or scenes of sea and mountain made the actual theatre of momentous events.

The landscape art of China and Japan abstains from such interests ; and yet it has sources of vitality which have a nearly equivalent effect.

Just as in Chinese life, nourished by Confucian ideals, the constructive lines of the social order were, so to speak, vertical—the tie of father to son and son to father being stronger than the tie of husband to wife—so in art a similar principle

PAINTING IN THE FAR EAST

of continuity prevailed. The same subjects were treated again and again. In Europe this happened also, so long as the Church or the State demanded the treatment by artists of subjects answering to national or universal aspirations. But landscape subjects have never been so demanded, and the landscape art of Europe has no such standing themes as have provided masterpieces of religious or mythological painting. In China it was different. Many are the advantages for an artist bred to such traditions.

It is a great gain for him that his subject belongs to his race, and therefore to mankind. It partakes of the universal ; it has been sifted by the choice of many generations ; it has struck root in the imagination of a people ; and so at once he is set in touch with the mind of his public, and can play upon a hundred associations and indefinable emotions. Again, he has to work within certain limits, and an artist is helped by limitations. For while they free him from the burdensome necessity of choosing among the vast and bewildering spectacle of the world, they concentrate his powers. The very fact that others, great and famous masters, have approached the same theme and handled it in their own way, inspires him with emulations, moves him with the necessity and the desire to make the subject his own—in a word, tests his originality far more severely, and, if he is successful, disengages it far more effectively, than if he had set out

Plate XIX.

Pines and Rocky Peaks.

By Ma Yüan.

Collection of Baron Yanosuké Iwasaki, Tokio.

(From the *Shimbi Taikwan*).

THE SUNG PERIOD IN CHINA

on a road of his own with the deliberate quest of novelty. Thus successively refined upon, fed and refreshed continually by new life, the depth of a subject is proved, and the varying new conceptions it evokes are like flowers upon an ancient tree.

Wisely, then, did the old Chinese painters maintain this perpetual challenge of traditional subject, even in landscape. The most conspicuous example is the group of Eight Views of Hsiao and Hsiang, eight scenes about the shores of Lake Tung-t'ing. But "views" is really too topographical a word. Here is a list of the subjects :

The Evening Bell from a Distant Temple.

Sunset Glow over a Fishing Village.

Fine Weather after Storm at a Lonely Mountain
Town.

Homeward-bound Boats off a Distant Coast.

The Autumn Moon over Lake Tung-t'ing.

Wild Geese alighting on a Sandy Plain.

Night Rain on the rivers Hsiao and Hsiang.

Evening Snow on the Hills.

These subjects are associated with the four seasons. And "Flowers of the Four Seasons" form another favourite set of subjects, generally landscapes. The Four Accomplishments, Writing Poetry, Playing Music, Drinking Tea, and Playing Checkers, provide motives for sets of pictures in which we find happy sages in their mountain

PAINTING IN THE FAR EAST

retreats, figures in great landscapes. Add to this the constant association of certain flowers with certain trees and certain animals, of the flight of the wild geese with autumn, of the willow with the spring, to name but obvious instances, and we see how immense a part order and tradition play in Chinese landscape. And this tradition was, at least while Chinese art remained vigorous, neither dead nor paralysing. For how free, after all, it left the individual artist, while at the same time it linked him with the common life of his countrymen, whose love of nature had been crystallised and consecrated for long generations in chosen themes.

This infinite linking of associations, these hundred sympathies, give to Chinese landscape a cohesion, a solidarity, a human interest which prove an animating power and remove it far from triviality and shallowness. Contrast the tendency in Europe which drives painters to Holland or Spain, to Hungary or Morocco, in search of something new in local colour to stimulate the jaded interest of a mostly indifferent public !

The great subjects of all art and poetry are commonplaces. Life, Love, Death ; these come to all of us, but to each one with a special revelation. It is by the new and original treatment—original, because profoundly felt—of matter that is fundamentally familiar, that great art comes into being.

Let us consider one of these traditional subjects

THE SUNG PERIOD IN CHINA

in an existing example: "The Evening Bell from a Distant Temple," by Mu Ch'i. A range of mountains lifts its rugged outline in the twilight, the summits accentuated and distinct against the pale sky, the lower parts lost in mist, among which woods emerge or melt along the uneven slopes. Somewhere among those woods, on high ground, the curved roof of a temple is visible. It is just that silent hour when travellers say to themselves, "The day is done," and to their ears comes from the distance the expected sound of the evening bell. The subject is essentially the same as that which the poetic genius of Jean François Millet conceived in the twilight of Barbizon, at the hour when the Angelus sounds over the plain from the distant church of Chailly. Well might such a subject become traditional in Europe. Yet our foolish and petty misconceptions of originality would cause all the critics to exclaim against any painter who took up the theme again as a trespasser on Millet's property.

Each of these works, the twelfth-century Chinese painting and the nineteenth-century French painting, is thoroughly characteristic of its continent. In the European picture human figures occupy the foreground, and in their attitude is concentrated the emotion which pervades the picture. The Chinese painter, on the other hand, uses no figures; for him the spectator supplies what

PAINTING IN THE FAR EAST

Millet places in his foreground. He relies on a hint, a suggestion which the spectator must himself complete.

What a public for a painter, one cannot help exclaiming, when the artist could count on his work meeting with minds so prepared, so receptive! To what a prevalence of taste and imagination in the society of the day the very slightness of the Sung landscapes, which many will think a fault of insufficiency, bears witness.

Mu Ch'i (Mokkei in Japanese) was a Buddhist priest, whose work was thought capricious and unpleasing by Chinese critics of his day, but who is regarded as one of the greatest painters by the Japanese. The taste of the two countries does not always coincide. It is probable that most of Mu Ch'i's paintings are in Japan. He was certainly a great master of monochrome, but is less celebrated for landscape than for his wild geese, storks, monkeys, and Buddhist figures. The British Museum has a tiger by him (from the Morrison collection) with a wild background of torrent and tossing branches, which is splendidly conceived.

Besides Kuo Hsi, already mentioned, whose work is exceedingly rare—the only examples I know of are in American collections—Hsia Kuei and Ma Yüan, famous in Japan as Kakei and Bayen, are the pre-eminent landscape masters of Sung. All three belonged to the Northern school, and their work has

THE SUNG PERIOD IN CHINA

the Northern vigour, combined with that wonderful delicacy and sensitiveness which marked the true Sung style. The Emperor Hui Tsung (Kiso Kotei) is almost worthy to be ranked with these. The example reproduced nobly illustrates Ma Yüan's style, though the greatest work of the master now extant must surely be the magnificent roll belonging to Mr. Freer. Every motive of Chinese landscape art is there combined. We enter into this enchanted world and are played upon by every mood of nature. Now the sunlight steeps the distance, and soft ripples break at our feet; now we are climbing dizzy paths, the immense crags tower menacing above us; we are shut within the walls of a ravine, we are liberated with the opening glimpse of wide horizons; sails gleam on winding waters; villages sleep under the hills; reeds tremble in the mist, tall pines drink the sun;—it is a world in which, once entered, we can wander for ever, and find new springs of delight. Mr. Freer's roll by Hsia Kuei is the only rival I know to this Ma Yüan. Less varied, less ample and genial, it has a dark force and passion like what we imagine of the wild torrents and the abrupt rock-ridges of the mountains.

The late Count Enrico Costa, who brought to the study of Oriental painting the same insight which made him so distinguished a connoisseur of the art of his own Italy, suggested to me that these great landscape rolls had their nearest counter-

PAINTING IN THE FAR EAST

part in music, in the sonatas of Beethoven. The remark was made while we were looking at the great roll by Sesshiu, which was doubtless done in emulation of such Chinese masterpieces as are now in the Freer collection. Certainly the effect of these unfolding scrolls, with their continuous undertones of rhythm, their superb contrasts of plangent vehemence, remote majesty, and melting peace, evoke like music responsive moods of emotion in swift yet related changes. And the suppression of local colour enables the imagination to work freely, as if in touch with elements rather than features of nature.

Loftiness and simplicity, a deep feeling for solitary places, give their character to the art of these masters ; the Chinese term for landscape, "mountain and water picture," indicates the elements of which it was habitually composed. Austere at times, with a sense of desolation in bare peak and blasted pine, yet often bathed in the mood of a serene and silent joy, the joy of the mountain-dweller gazing out on vast spaces of moon-flooded night, their art is never trivial, never pretty. The early landscape of Europe, conceived as a fair setting to the deeds of men and women, the earth a garden with soft verdure for their feet, trees to shade them, and rivers to refresh them, mountains on a blue horizon to repose their eyes upon ; neither this, nor that sentiment of ownership associated with

THE SUNG PERIOD IN CHINA

topography in which the independent art of landscape in Europe had its root, has any reflection in the painting of Sung. Yet we find now and then decided tendencies towards realism, always with an element of poetic choice, in such pictures as Li Ti's "Peasant returning Home," * with its leafless oak, a picture Ruysdael would have admired; or Ma Lin's "Fisherman on a Wintry River," † with its vivid impression of December's bareness and the rustling of frozen sedge. And in Chao Ta-nien's "Lake in Winter," ‡ of which I am often reminded in passing St. James's Park on a misty morning, with its delicately outlined willow-boughs, its moor-fowl on the water, the bands of vapour stealing across the trees, and birds flocking through the dim haze, we find much of that intimacy of feeling which charms us in a Corot. Do I exaggerate in speaking of the age which produced such things, over which there seems for us no veil of intervening time, as an age of modern character?

To those artists already mentioned, one name (out of how many!) may be added, that of Mi Fei, since this painter, famous also as a critic, made a new departure in landscape. A number of existing paintings, in the Freer and other collections, are attributed to the master, and all have a common character. Mi Fei, who lived from A.D. 1051 to 1107, preferred, like Wang Wei, to work in monochrome.

PAINTING IN THE FAR EAST

He loved to paint wooded peaks towering over mists, and with a fully-charged brush dashed in his strokes, leaving effects of extraordinary richness and intensity of tone. An impetuous poetry, flooding from his emotional nature, pervades his work, which has a strongly personal character. His style was much imitated by artists of the Southern school in later times.

It cannot but be noticed that in the landscape art we are considering there is no marked preference for what is sunny and comfortable, nor, on the other hand, for what is savage and forbidding. We may say of these painters, as Walter Pater said of Wordsworth, "They raise physical nature to the level of human thought, giving it thereby a mystic power and expression; they subdue man to the level of nature, but give him therewith a certain breadth and vastness and solemnity." To many spirits of the nineteenth century in Europe the Sung painting would have seemed, had they known it, the very expression of their own minds: * that is why it is of such living interest to us now.

In the Sung period the system of competitive examination had become by long use frigid and academic. The great economic reformer, Wang An-shih, introduced into the system a more flexible

* Compare such sayings as that of Amiel: "Every landscape is, as it were, a state of the soul."

THE SUNG PERIOD IN CHINA

spirit, testing character, and bringing it more into relation with the reality of life. Wang An-shih, though no professional poet, has left a little poem, the sense of which is as follows: It is midnight; all is silent in the house; the water-clock has stopped. But I am unable to sleep because of the beauty of the trembling shapes of the spring flowers, thrown by the moon upon the blind.

In this little poem we get vividly expressed the old Chinese feeling for the beauty of flowers. I know not where in European literature or art we shall find a parallel to this peculiar poignancy of impression, this extreme sensitiveness. It is not merely voluptuous eye-pleasure; it is not the feeling of Keats's lover who seeks narcotic joy by glutting his sorrow

On the rainbow of the salt sand-wave,
Or on the wealth of globèd peonies.

Nor is it the sheer overpowering of the senses which Shelley celebrates in "arrowy odours" darting through the brain. It is more akin to the emotion of Wordsworth's "Daffodils." But in the general art and literature of Europe it is the beauty of the human form and face which alone arouses a poignancy of emotion which is comparable.

In his delightful "Book of Tea," Mr. Okakura tells us of the extraordinary devotion to flowers prevailing from early ages among the Chinese. I

PAINTING IN THE FAR EAST

have already mentioned the poet of the fourth century who shook off the irksome pomp of official life to cultivate the chrysanthemum in his retirement. Mr. Okakura reminds us how the T'ang emperor, Ming Huang, hung tiny golden bells on his favourite plants to frighten away the birds ; he tells us how it was thought that the peony should be watered by a fair maiden in rich attire, the winter plum by "a pale slender monk." With the Sung dynasty and the ascendancy of Zen thought, a tinge of mystic feeling is infused into this passion for flowers. It is no longer such keen sensuous delight and understanding as inspired Perdita's matchless words :

Daffodils

That come before the swallow dares, and take
The winds of March with beauty ; violets dim,
But sweeter than the lids of Juno's eyes
Or Cytherea's breath.

It is the consciousness of a living soul in the world of nature, parallel to the soul in humanity, making in these sensitive brief blossoms its manifestation, and touching the mind with

Thoughts that do often lie too deep for tears.

Nothing to the contemplative spirit was mean or insignificant ; the fullness of life was more surely apprehended in small things than in great, in the power of a hint to the imagination than in the satiety of completed forms.

THE SUNG PERIOD IN CHINA

One of those sets of associated subjects which I have already mentioned is "Snow, Moon, Flowers," in each case conceived as an apparition of beauty from the unknown. The flowers are most often the flowers of blossoming trees, appearing at winter's end on the dark, leafless branches. And always it is the flower in its growth, in its life, that is painted. In the Sung age, for the first time, blossoming plum branches were painted in ink, without colour ;* the sensuous appeal of tint and texture detached as unessential or disturbing to the spirit of contemplation. Yet colour was often used, in subdued tones, with a noble harmony. Look at Li Ti's "Rose Mallow" † (the *Kokka*, No. 95). It is just two or three blossoms and opening buds on a leafy stalk, but it trembles in leaf and petal to the air as the wind blows and bends the stems upon its root unseen. The spacing is perfect, the colour beautiful ; but when we have said, "This is fine colour and design," we are still outside the secret of the picture : and I cannot find any words to describe the peculiar emotion it produces, though I know it is different from that which any European flower painting evokes, deeper and rarer. Before a masterpiece in this kind by Fantin Latour

* See the *Kokka*, No. 195 ; article by K. Hamada.

† The rose mallow (Jap. *fuyo*) is often confused by European writers with the peony. I have been told that a plant of it was presented to one of our sovereigns by a Chinese emperor, and was placed in Kensington Gardens, but I have had no leisure to verify this information.

PAINTING IN THE FAR EAST

we feel that the flowers have been taken from field or garden to be grouped before us, a feast for the eye ; but the Chinese artist brings us to the flower, that we may contemplate it and take from it into our souls something of the beauty of life which neither sows nor spins. That which Li Ti felt in painting his picture still emanates from it, eluding words.

Lou Kuan has painted rose mallows (the *Kokka*, No. 84) reflected in water. A bloom hangs into the picture from above, and a faint image of it colours the running water below, hinting at far more than we see. The Chinese say of poetry, "The sound stops short, the sense flows on"; and the same principle is in this painting.

Flowers, Moon, Snow ; these three beauties of earth and air have a peculiar glory and consecration in the art of the Far East.

✓ A Japanese friend of mine told me that when he was in Paris he woke one morning to find that snow had fallen in the night. As a matter of course, he took his way to the Bois de Boulogne to admire the beauty of the snow upon the trees. What was his astonishment when, with his friend, another Japanese, he arrived in the Bois, to find it totally solitary and deserted ! The two companions paid their vows to beauty in the whiteness and the stillness, and at last beheld in the distance two other figures approaching. They were comforted. "We are not quite alone," they said to themselves. There

THE SUNG PERIOD IN CHINA

were at least two other "just men" in that city of the indifferent and the blind. The figures drew nearer. They also were Japanese!

We in Europe are not blind to the beauty of the snow

And the radiant shapes of frost,

but certainly we are far from having that kind of religious feeling which prompts the Japanese to go out and contemplate its freshly fallen splendour. We do not regard it as visible manifestation of beauty, the apparition of a power from the unseen, at whose coming it behoves them to be present. I am not sure that we are not more conscious of the inconveniences of a snowfall than of its loveliness.

It was in China, in the Sung age, that this attitude of mind I speak of first found mature expression. There is no longer any element of dread or discomfort in the Sung artists' and poets' feeling for wild nature, storms and rain and snow; nothing of the horror of mountains which survived till nearly a century ago in cultivated Europeans. The life of nature and of all non-human things is regarded in itself; its character contemplated and its beauty cherished for its own sake, not for its use and service in the life of man. There is no infusion of human sentiment into the pictures of birds and beasts, of the tiger roaring in the solitudes, of the hawk and eagle on the rocky crag; rarely is there

PAINTING IN THE FAR EAST

any touch of the sportsman's interest which has inspired most European pictures of this kind. If an artist painted a bird with such emotions as were Shelley's when he wrote his "Skylark" we should have something comparable to the Sung painting, though different. These men painted birds and flowers as they were in nature, with no explicit symbolism, with nothing factitious added, and yet the inspiring thought, the sensitive feeling, that was in their minds as they worked has wrought its effect and still finds a response in the minds of those who understand.

To see the world in a grain of sand
And a heaven in a wild flower.

The words of our own Blake crystallise more aptly than any language of mine what was at the heart of the poet-painters of Sung.

CHAPTER X. THE MONGOL EMPIRE : PAINTING IN TIBET AND PERSIA

CHINA, during the reign of the House of Sung, suffered continual pressure from the encroaching Tartars of the north. Two rival Tartar dynasties in succession held sway over her northern territories, and the later of these was contesting power with the weakened Sung empire of the south, when a new and mightier force arose in the Mongolian conquerors, who swept southward from the regions now known as the Transbaikal provinces of Russia, and, first overthrowing the Nü-chên Tartars, at last put an end to the House of Sung.

In 1264, Kublai Khan fixed his capital at Peking. Kublai was no mere barbarian : the arts and literature flourished under his wise rule. The Mongols, like other conquerors, went to school with those whom they conquered, and became absorbed into Chinese civilisation. The new dynasty, Yüan, as it is called, lasted a little over a century.

Of Chao Mêng-fu, the most celebrated painter of this period, I have already said something in describing his copy of a landscape by Wang Wei, now in the British Museum. Born in 1254, he retired into private life on the final downfall of the House

PAINTING IN THE FAR EAST

of Sung, from the founder of which he was himself descended ; but in 1286 he was summoned to court, and became a favourite of the Mongol emperor. The landscape roll just mentioned is dated 1309.

Chao Mêng-fu, known to the Japanese as Chosugo, was famous for his horses. They rivalled those of Han Kan. A famous picture of his was the "Eight Horses in the Park of Kublai Khan," a version of which is in the collection of Mr. George Veitch. It is a scroll painting ; and the horses are seen disporting themselves in freedom on the grassy slopes of the park, down which a stream comes tumbling over rocks ; one of them is rolling on the grass. Two fragments of a similar painting are in the Louvre, in the Musée de l'Extrême-Orient, there described as copies, though of such fine workmanship that they might well be thought originals. Most collections in Europe and America have acquired during the last few years paintings attributed to this master. But no signature is more frequently forged than his, unless it be that of the Ming painter, Ch'iu Ying. I confess that among the great number of Chao Mêng-fu paintings of horses and hunters that I have seen, varying greatly both in quality and style of workmanship, I have found it impossible to choose one which could serve as an indubitable starting-point for the study of his work. At present we have to content ourselves with a general im-

158

PAINTING IN TIBET AND PERSIA

pression founded on what are in most cases Ming or later copies.

In the British Museum is a small drawing of landscape in ink by Yün Lin, another Yüan painter, which recalls the studies of Claude in its truth and tender feeling, unalloyed by any mannerism ; a charming example of the Southern style. But in the main this period is marked by the naturalism to which the later Sung art was tending, and by a certain hardening and loss of the delicate vibration of life, the beginnings of an academic preoccupation with method and material.

A painter of individual style, known and appreciated, like Mu Ch'i, more in Japan than in his own country, is Yen Hui (Ganki in Japanese). He painted chiefly figures from Taoist and Buddhist legend, and is famed especially for his pictures of Li T'ieh-kuai, the Taoist wizard of the hills, breathing out his spiritual essence toward the sacred mount of the Immortals. He is represented as a beggar with ragged garments and gourd hanging at his girdle of oak leaves ; one hand grasps a crutch, the other props his chin, and his eyes look out from the picture under his black matted hair with the smile of a magician. Li T'ieh-kuai's brother wizard-sage, who made a great toad his companion, was also a favourite subject of Yen Hui's brush.

In the *Kokka* (No. 66) is the coloured repro-

PAINTING IN THE FAR EAST

duction of a portrait of an emperor by Ch'ien Shun-chü. It is the whole-length figure in profile of a gentle youth, who appears to be placing a sheath upon his finger-nail. He wears a cap, and a long robe, hiding the feet, of a dull rose-colour, with a girdle of blue, in which a flute is stuck. If we compare this portrait with one of the figures of the Ku K'ai-chih roll, we are conscious of a loss of vitality in the bounding-line which must play an all-important part in work of this simplicity of convention. Yet it is a painting of great beauty. Ch'ien Shun-chü was also a famous painter of flowers and fruit. In the art of this time we note a stronger naturalism, and in the flower-pieces a greater solidity of treatment. Two damaged but beautiful pictures of Flowers and Insects in the British Museum, of uncertain authorship (Nos. 35 and 36) are interesting examples of the period.

Kublai Khan was a devoted Buddhist. But the form of Buddhism which he adopted as the state religion of China was a form which had acquired its distinctive character in Tibet and was called Lamaism.

In the seventh century the Emperor of Tibet was converted to Buddhism by his two wives, one a princess of China, the other a princess of Nepal. In the native religion the worship of demons and the practice of magic predominated; and it was not long before the countless Tibetan deities

160

PAINTING IN TIBET AND PERSIA

were incorporated into the new religion, in the guise of defenders of the Buddhist Church. The Lamas were an order of priestly exorcists, and a priest-kingship was established in the country by Kublai, which lasts to this day, though the title of Dalai Lama dates from a seventeenth-century usurper.

Tibetan painting, at which we may here briefly glance, reflects the monstrous and lurid features of the Lamaist religion. How much of its technical character is due to Chinese example we do not know, but the influence was doubtless considerable, and in early times Peking was probably the centre of Lamaist art. A Chinese example of fairly early date is the Kwanyin in the British Museum, formerly in the Olga Wegener collection. The goddess floats on her lotus-couch over the river of Occan, perfuming the air with flowers. The workmanship is of exquisite fineness, and the colour rich. The specimens which have been brought to Europe from Tibet in recent years are mostly of the last two or three centuries. But a hieratic style of painting, as we know from Byzantine art, keeps a fixed character, and it is difficult to date these paintings with any certainty.

The Tibetan pictures I have seen vary little in type so far as technique is concerned. They are painted on a kind of canvas, in body-colour, often on a black ground. The drawing of the finest

PAINTING IN THE FAR EAST

examples is vigorous and rhythmical, the colour glowing and rich. Yet in neither respect are they comparable with the classic painting of China. Moreover, for the most part the subjects, though impressive from fantastic power of imaginative treatment, are in essence savage and horrible. Flames writhe and twist in backgrounds of gloom ; rivers turn to blood at the approaching presence of infernal goddesses ; the Eight Demons trample on human victims ; fire-wreathed fiends drink from human skulls ; the green boar, the blue bull, the white elephant crush miserable mortals under them. The atmosphere of torment and terror is relieved at times by brief glimpses of fair, verdant landscape ; single passages, individual figures, may be found that have grace or beauty, but the general impression left is that of terrible and obscene nightmares in a burning gloom. When the subjects are milder the art, if more agreeable, is as a rule less forcible and interesting. A good deal of later Lamaistic painting, light in tone, rather gay in colour, rather coarse in handling, seems to have no independent character, and may be classed merely as provincial Chinese art.

From this epoch also dates the strong influence of China on Persian painting, as we know it in the beautiful miniatures of the Middle Ages.

The conquest of Persia by the armies of Genghis

PAINTING IN TIBET AND PERSIA

and Kublai Khan set up once more a quickened current of communication between the east and west of Asia. And the succeeding conquests of Tamerlane at the end of the fourteenth century provoked yet further a stimulating intercourse and fusion of ideas, in spite of all the havoc and slaughter which they caused. Under Tamerlane himself and his successors a flourishing school of art arose in the heart of Asia, at Samarcand.

I have already quoted from the learned article* in which M. Blochet has collected very interesting evidence on the origins of Persian painting. We have seen how in the eighth century the princes of Turkestan sent to China for their artists. Later we find a Persian astronomer having a porcelain tower brought piecemeal from China at enormous expense and erected at the gates of Samarcand. It was afterwards destroyed by barbarian raiders. In Samarcand and in Herat arose the schools of miniature painters whom the Persians took as their models. M. Blochet's researches all go to prove that the mediæval painting of Persia has its roots not in Persia itself, but in the countries beyond the Oxus. And this is confirmed by the miniatures themselves. Since the first edition of this book appeared, Dr. F. R. Martin's long-awaited work on Persian painting has appeared, and to that and to its splendid series of reproductions I must refer

* *Gazette des Beaux-Arts*, August 1905. See above, p. 91.

PAINTING IN THE FAR EAST

the reader. Dr. Martin tells us that the relations between China and the Muhammedan world date from the very beginning of the Muhammedan era. But though China is only one of several influences which went to mould Arabian art under the Caliphate, it becomes predominant after the fall of Baghdad and the new ascendancy of the Mongols. True Persian painting only begins, as Dr. Martin says, from this time.

Of the few surviving paintings of the Mongol period in Persia, those in the Persian manuscript history of Genghis Khan and his family belonging to the Royal Asiatic Society, and dated A.D. 1314, are the most important. Here Mongol types and fashion of drapery, and a decided reminiscence of the Chinese manner of drawing, are manifestly visible. The Chinese element was soon assimilated, and a new native school arose which gradually matured into the sumptuous art of the fifteenth and sixteenth centuries. But to Chinese influence again was due the formation, about the beginning of the fifteenth century, of a school which flourished at Samarcand under Tamerlane and his successors, and which relied on a pen outline of exquisite quality, with either no colour at all or a few discreet touches of red and blue or gold. The two superb drawings of warriors reproduced by Dr. Martin in his book (p. 155) cause one sharp pang of regret that more of the earlier productions of this Samarcand school

164

PAINTING IN TIBET AND PERSIA

have not been preserved. A number of beautiful pen-drawings of this style exist—a sort of translation from brush to pen of the Chinese manner—but few approach the vigour and breadth of these early specimens of the art of Tamerlane's court.

To Bihzād, the most famous of Persian masters, seems due the creation of the Persian school of painting in its maturely developed and independent form. Bihzād worked chiefly at Herat and Tabriz, in the latter part of the fifteenth and early part of the sixteenth century. He and his great pupil Mirak are both represented in the beautiful miniatures of a Nizami manuscript in the British Museum (Or. 6810). Most of the Persian miniature paintings in European collections show the influence of Bihzād and his school. In this mature school of Persian art an exquisite charm of colour is the chief attraction. Design becomes weaker, less coherent and unified with the progress of time, and in later periods decorative convention tends to usurp vitality and expressiveness of drawing; even the colouring at last loses quality, and coarsens. But there is abundance of painting of the sixteenth, seventeenth, and even of the eighteenth centuries, which is remarkable for sensitive delicacy of drawing no less than for singular beauty of colour, heightened and enriched by the exquisite mountings. Want of creative ideas, apparent in the limited range of subject and the endless and servile repetitions,

PAINTING IN THE FAR EAST

accounts for a general languor of design contrasting strongly with the painting of China. Yet Persian painting will often refresh us by its naive and unstudied design ; it repeats itself as craftsmen do, with pleasure ; it is saved from the coldness of academic formula. If it is less central and significant than Chinese painting, and if we may fancy Wu Tao-tzū, had he lived later, speaking of it in much the same terms that Michaelangelo uses of Flemish art, we may also find in it the same sort of exhilarating contrast, after too much of the later academic painting of China, that we find in Altdorfer or Memling after too much Pontormo or Parmegiano. So we do not soon tire of a certain monotony, inherent less in subject than in design, of those scenes from poetry and romance, where horsemen ride up to ruined palaces among solitary hills, or chase with Bahram the lion and the leopard ; where Laila finds her lover Majnun, a youthful wasted figure, among the wild animals in the desert ; where fair ladies bathe in garden pools under flowering trees, or a princess listens to a story-teller, surrounded by her maids ; where sages sit teaching wisdom to their disciples, or a king rides to visit a dervish in the wilderness. Whatever the theme, or the mood implied in the theme, the artist never remits the delighted patience with which he supplies his exquisite setting of the scene, painting over and over again the rocks of fantastic tinges of pink or purple or dove-colour, which rise to the high

166

PAINTING IN TIBET AND PERSIA

horizon against a sky of gold or blue, the crimson mallows and irises tufting the banks of streams, the slender-tipped cypresses, and the magnificent plane-trees, showing their pale under-leaves. It is a world bathed in golden air of supernatural clearness, spotless and distinct with gem-like colours. In no art has the painter used his materials with so refined a luxury. And this sensuous beauty, almost intoxicating in intensity, makes us forget the lack of inner movement in this art, its contentment with a piecemeal vision of things, the absence of any compelling tendency to unify and hit home. Even in those splendid pages which depict Mahomet riding among the starry worlds, attended by rushing angels, the atmosphere is still a sensuous one. On the other hand, how enchanting are the portraits, especially the portraits of youth, just because of this peculiar temperament!

The scope of this volume precludes anything but a glimpse at this fascinating chapter of Asian painting. I have wished here merely to indicate the kind of relation in which, so far as we can ascertain, Persian painting stands to the art of Asia in general. Though it had neither the vigorous free growth of Chinese painting, nor its capacity for rising to impassioned loftiness as an expression of thought and religious ideals, though it is far less central and significant, yet its luxurious day-dream holds us with a peculiar spell.

CHAPTER XI. THE ASHIKAGA PERIOD IN JAPAN

WE saw how the arts in Japan came into existence by contact with the fertilising civilisation of China ; how in the eighth century a national style had been formed in painting, grafting, we may infer from the very few examples that survive, on the traditions of the continent the Japanese quality of delicacy, buoyancy, and sweetness ; how a great school of sculpture had been established ; how in the ninth century a new wave of direct influence from the masters of the T'ang dynasty bore on its crest the great achievement of Kanaoka ; how the Kosé line which Kanaoka founded sent out branches which developed more purely Japanese art in the Kasuga and Tosa schools ; how in the twelfth century Toba Sojo inaugurated the virile and dramatic painting, saturated with Japanese character, which Mitsunaga and Keion carried to a climax, and which was continued by a host of powerful draughtsmen and splendid colourists through the fourteenth century ; how finally the Tosa school began to fail, and a new revival from China rose into predominance.

From 1335 to 1573 extends the period of Japanese history known as the Ashikaga period. The

Plate XXIII.

Portrait of Shoichi Kokushi.

Tofukuji Temple, Kioto.

(From the *Shimbi Taikwan*).

ASHIKAGA PERIOD IN JAPAN

power of the Hojo family, which had succeeded the Minamoto in the Shogunate, was destroyed by Takauji, the founder of the Ashikaga line. He removed the capital from Kamakura and restored it to Kyoto.

Ashikaga Yoshimitsu, third of the line, was a contemporary of the first Ming emperor, and under his rule there was intimate communication with the empire of the continent. Yet it was not from the contemporary Ming painting, but from the classic art of Sung that the Ashikaga style took all its inspiration. Now, instead of the gorgeous coloured scroll, instead of the representation of ceremonious manners or heroic action, Japanese painters turned with that whole-hearted fervour and intensity which is in the character of their race, to the bold and simple ink-sketch of landscape, birds, and flowers. The Zen doctrine, which had been a pervading influence in the active life of the Kamakura warriors, had ripened on the philosophic side in the contemplative retirement of the monasteries, and now flowered afresh as an æsthetic inspiration. Nearly all of the Ashikaga painters were priests or monks.

This Chinese Renaissance in Japanese art coincided nearly in date with the Renaissance in Italian painting. The close of the fifteenth century found it in full flood. But its beginnings were of earlier date. Nen Kao, who died in 1345, produced ink-

PAINTING IN THE FAR EAST

sketches of sages in the genial temper and with the rapid freedom of Mu Ch'i. Gukei and Tesshiu were others who still in the fourteenth century anticipated the coming revival of the Sung style.

But the greatest of these precursors of the Chinese Renaissance is famous less for his monochrome paintings than for his pictures in colour. This is Cho Densu, known also as Meicho or Mincho. Born in 1351, he died in 1427. He was a priest, and has been compared to Fra Angelico for his union of art and devotion. In this respect, however, he was only one of a host of painters. It is recorded that his absorption in painting drew on him a rebuke from his superior. He is famous as the painter of groups of Arhats, founded on Chinese models.

But the summit of his art is to be found rather in the portrait of Shoichi Kokushi, reproduced in this volume, a masterpiece of portraiture, of colour, and of design. The aged priest, with wrinkled austere features—how like some portrait by Ghirlandajo!—sits in a high chair over which a great cloth of green and white pattern has been thrown. The tip of his long staff resting on the chair makes a single note of red in the picture.

Of his religious painting a fine example is the picture reproduced in the *Kokka* of Kwannon, the Goddess of Loving-kindness, of whom a Buddhist text says that he who prays to her, even though his

ASHIKAGA PERIOD IN JAPAN

soul be in fire, shall feel the flames turn into a fountain of fresh water. She sits, a majestic figure, beside the fountain which ripples past her feet, while a votary kneels on the brink of the healing stream.

Cho Densu also practised the ink-sketch. And here I must guard the reader against a misconception which has received some support in Europe. Dr. Anderson has classified certain painters as forming the Buddhist school. But there is really no such thing. "School" in Japanese means a traditional style. An artist of any one school could work, if he chose, and in later periods often did work, in the style of a different school. The Buddhist picture (*butsugwa*) was richly coloured, with lavish use of gold. But I doubt if any Japanese artist painted Buddhist pictures and nothing else. The misconception has arisen simply because the temples have preserved religious paintings of the early schools, while all the secular pictures which are known to have been produced by Kanaoka and other masters have perished.

The Buddhist picture was painted alike by Cho Densu and by the fifteenth-century masters of the Tosa school, though the style of each in secular subjects was totally different. The great period of the Tosa school was coming to an end; Mitsunobu retained much of the power and all the rich colouring of the earlier epoch; Yukihide was a worthy rival. But before the fifteenth century was turned

PAINTING IN THE FAR EAST

a galaxy of artists had arisen, all working in the Chinese manner, all followers of the free style of Sung: the Tosas were outshone, and their work disesteemed.

An impetus came from the outside. A Chinese artist settled in Japan and adopted the name Soga Shiubun. A magnificent pair of snowy landscape screens in the Freer collection has been with much probability attributed to him: and in the British Museum (Morrison collection) is an upright landscape bearing his seal. But it is as a teacher that he is chiefly important, and his son Soga Jasōku became one of the greatest masters of the time. Meanwhile another influential teacher was attracting many followers. This was Josetsu, by some said to be a Chinese, but more probably a Japanese who had studied in Japan. A specimen of his very rare work is in the Boston Museum. Famous among his pupils is Shiubun, the Priest (to be distinguished from Soga Shiubun), who is regarded as the founder of what is called the Chinese school of Japan. His work is very rare. Native critics praise his landscapes for their "lofty tone," their mildness and serenity. Pre-eminent among his pupils are Oguri Sotan, especially famous for his pictures of hawks and eagles, and No-ami, poet, critic, and courtier, renowned for his paintings of tigers. The son of No-ami, Gei-ami, and his grandson, So-ami, played a distinguished part in the history of the revival.

Plate XXIV.
Jurojin.
By Sesshiu.
(From the *Kokka*).

ASHIKAGA PERIOD IN JAPAN

By the middle of the fifteenth century there had arisen a greater than any of these, a master whom the Japanese venerate as perhaps their greatest name in painting, certainly among the very greatest—Sesshiu. He was born in 1420. Having studied and worked with the painters of his own country, at the age of forty he determined to visit China and renew his inspiration at the fountain-head of art. To his surprise, he found that he had more to teach than to learn. The Chinese acknowledged his great originality; he became famous; and the Emperor of China himself commissioned him to paint a set of landscapes on his palace walls. Among these was a painting of Fuji, a memory of his own land. This signal and unique honour for a Japanese set the seal on his renown. Sesshiu returned to Japan, and continued to paint till his death at a ripe age in 1506. A painting in the British Museum, made when he was eighty-three, of the merry fat god Hotei pulled along the ground by children, shows that old age had not dimmed his eye nor relaxed the vigour of his hand.

It is not easy for Europeans to understand quite all the admiration accorded to Sesshiu in Japan; we are indeed inclined to wonder, at first, at the enthusiasm evoked by this whole phase of Ashikaga painting, in which Sesshiu is the greatest figure. It seems to us so limited, so narrow in its range. It is content with landscape, birds and flowers,

PAINTING IN THE FAR EAST

adding only a few figures from religious history or legend, and these not as actors in any human drama, but as types of contemplation or spiritual desire. It is an art that is almost wholly subjective. Again, on the technical side we shall, most of us, be more struck with its limitations than with its powers. It eschews colour almost entirely, though only those who have seen and studied some of the light-coloured paintings of a Sesshiu or a Sotan can realise what exquisite harmonies can be attained with tawny and russet, or pale emerald green, against the miraculous range, from silver grey to velvet black, that brush and Chinese ink are capable of in the hand of a Japanese master. How slight, too, seems the workmanship! Even those unused to Oriental art can appreciate such a painting as Sesshiu's "Jurojin," the genius of immortal old age, a hoary figure, bowed with the weight and wise with the wisdom of uncounted years, gazing out from among the intricate branches of blossoming spring trees, while the mysterious fawn that companions his solitude rubs its head across his knee. No one can fail to be impressed by the sense of significance and sublimity in this imaginative conception, by the majesty of design and power of execution. This is indeed one of the central masterpieces of the art of Japan. Yet it is on his landscapes that the fame of Sesshiu chiefly rests; landscape, according to his own confession,

Plate XXV.

The Haunt of the Wild Geese. One of a set of eight.

By Sesson.

British Museum.

ASHIKAGA PERIOD IN JAPAN

was the most difficult province of art. And although we may begin by thinking that we know better than the Japanese, and that traditional idolatry has set Sesshiu too high, yet when I recall the landscape sketches of Rembrandt, I feel that in Sesshiu Rembrandt himself would have welcomed a peer. For just as Rembrandt with a blunt reed-point and sepia could conjure up in a few seemingly careless strokes the essentials of a scene, everything in its right place and at its due degree of distance, so Sesshiu amazes us by his power with the brush. His strokes are sudden, strong, and vehement, he seems careless of modulating them: and yet how magically all falls into place—the masts of the fishing-vessels beyond the rocks, the clumps of trees, the towering promontories! It is this extraordinary mastery of forcible brush-stroke which gives Sesshiu his supremacy with the Japanese; this, and the intensity and directness which he combines with unsurpassed greatness of spirit. As the “Theban eagle” among the poets of Greece, so is Sesshiu among the painters of his country.

But we shall only half understand these Ashikaga masters if we regard their technical achievements only. As I have said already in writing of the Sung artists of China, we must firmly grasp the intention of their work. A painting was as a communicating spark between mind and mind; we must not judge it, as we with our Western notions

PAINTING IN THE FAR EAST

are too apt to do, for its achievement as a completed piece of workmanship, dwelling on the artist's skill and science. Skill and science in a work of art are, let us never forget, utterly valueless in themselves except as a means to awake emotion of worth and power in ourselves, the spectators. And these painters found that mind could speak to mind by suggestion more intimately than by elaboration. All their art, too, was but one expression of a pervading ideal of life. To find one's own soul, the real substantial soul, beyond and behind not only the passions and unruly inclinations of nature, but also the semblances with which even knowledge, even religion, may cloud reality by imagery, form, ritual—this was the aim of Ashikaga culture ; liberation, enlightenment, self-conquest. For the Zen ideal, which had inspired so much of the Chinese art in the Sung age, impregnated even more profoundly, if possible, the Ashikaga painters, though we must admit that in comparison with the Chinese works of Sung their art shows something, if not all of the difference between the classic drama of the French and the Greek originals on which that was founded.

It was now, under Zen influence, that the Chano-yu, the Tea-ceremony, was elaborated ; and I must devote a few words to this singular institution, which was to exert an incalculable influence on the Japanese mind and character.

ASHIKAGA PERIOD IN JAPAN

Tea of choice quality was not known till the twelfth century, when a priest of the Zen sect brought back some plants from China. The wakeful properties of the leaf caused it to be prized as an aid to meditation, and in course of time the tea, at first so valued for its rarity that small quantities of it were given as a reward for heroism in battle, came to be associated in a ceremonial manner with the doctrine of contemplation.

A priest, Shuko, and the painter So-ami, founded the Tea-ceremony, as it is practised in Japan. Acting on their counsels, the Shogun of the day, Yoshimasa, eighth of the Ashikaga line, built the first tea-chamber in his famous Silver Pavilion. Yoshimasa retired in 1472, and gathering round him the finest artists of the time, devoted himself to æsthetic pursuits, setting a fashion to the nobles which was of far-reaching influence on the whole nation. Nothing ornate was suffered in the tea-chamber : its small proportions, its severe furniture, were strictly prescribed ; even the garden seen without must harmonise, and show no gaudy tone, no luxuriant detail ; and in conversation all tittle-tattle was to be abhorred. At these meetings a single painting would be shown ; and when we look at one of the ink-sketches of this period, and remember the world of thought in which it was produced, we shall understand better its peculiar qualities, its disdain of all emphasis, loudness, and richness,

PAINTING IN THE FAR EAST

its suggestive slightness and refined simplicity. Austerity is so rarely cultivated by the human spirit, save at the cost of harshness, that we must recognise as a thing of rare felicity the light, flexible, and gracious temper which is infused into the severe aim of the Ashikaga masters. The secret lay in the discovery that beauty has most power on the imagination when not completely revealed; perhaps the statues of antiquity that Time has mutilated are those which move us most; hence the choice of subjects which to us often seem trivial or insignificant, but which to the prepared mood are sufficing hints towards one supreme idea. Mr. Okakura has written some eloquent pages on this theme.*

With the name of So-ami is associated the elaboration not only of the Tea-ceremony, but of the art of landscape-gardening, another art of Chinese origin. Buddhist monks had been ever careful in their choice of a site for their temples, so that beauty should reside in the whole surrounding, in the genius of the place, rather than in the building merely. By So-ami the features and component parts of such surroundings were analysed and catalogued, and infinite thought was spent on the refinements of an art which aimed at a definite influence on the beholder's mind, at the evocation of certain emotions by the aid of inherent character or

* "Ideals of the East," pp. 168-180.

Plate XXVI.
Shoriken crossing the sea on a sword.
By Motonobu.
British Museum.

ASHIKAGA PERIOD IN JAPAN

associations in the features of a scene. The art of flower arrangement, concerned above all with the interpretation of the life and growth of the flower, not with harmonious colour effects, was another of the studies of the circle of the Silver Pavilion, no less than the old pastime of "listening to incense," an exercise in literary knowledge and taste, even more than in discrimination of the senses.

So-ami, that painter of space and solitude, of great mounded hills and misty marshes where the wild-fowl cry, remained in the purely Chinese tradition which Shiubun inaugurated. But though all the painters of this revival worked in a common spirit and with one ideal, more than one distinct style was grafted on the original stem. Thus the style of Sesshiu was followed by a group of powerful talents, among whom Sesson, Keishoki, and Shiugetsu were the most illustrious. Sesson indeed is almost the rival of Sesshiu. The British Museum is fortunate in possessing a precious set of eight sketches by Sesson, landscapes which show to admiration the special qualities of the Sesshiu style, its power of suggesting space, atmosphere, aerial distance, by swift and forcible strokes. A portrait of Vimalakirti by Shiugetsu in the same collection is interesting as being painted, not in the Sung style, but in the contemporary Ming style, which the artist had the opportunity of studying at first hand, since he accompanied his master to China.

PAINTING IN THE FAR EAST

A third tradition was formed by Masanobu, the first of the Kano family. It was in this Kano family that the Chinese style was to be assimilated most thoroughly with the Japanese character; and the Kano style, when fully developed, formed a powerful and persistent tradition, lasting even to this day, and rivalled only by the long line of Tosa in its centuries of fame.

Masanobu, born in 1453, died young, according to the most trustworthy tradition, in 1490. Hence his works are rare, but enough survive to reveal a painter of poetic imagination, the delicate modulation of whose brush contrasts strongly with the vehement force of Sesshiu's strokes. One of the most beautiful pictures of the time is Masanobu's picture, shown in London in 1910, of a Chinese sage, whose retirement was dedicated to contemplation of the lotus, musing in his boat on a lake over which feathery willow branches droop, while on the water blossoms of the sacred flower shine in the still morning air, hung with veils of tender haze. An old version of this painting has recently been purchased by the Louvre. In our own national collection are two original landscapes in the lightly coloured style.

The gentleness of Masanobu's nature was reinforced by a commanding strength in the genius of his son. Motonobu, if he lacks something of

180

ASHIKAGA PERIOD IN JAPAN

the rarity and loftiness of his father, is the most vigorous and various of the whole Kano school. Few names in Japanese painting stand higher than his. The force and firmness of his brush are controlled by that calligraphic element which is of the essence of the pure Kano style ; its supple beauty of stroke adapts itself to every subject, unlike that of Sesshiu, whose imperious freedom of spirit accommodates all things in nature to his own energy and daring. The clean strength of Motonobu's handling is magnificently seen in a painting in the British Museum of the sage Shoriken crossing the sea on a floating sword, defying the rage of the foaming waves and winds that blow his hair and toss his garments. Less triumphant in force of line, but of extraordinary beauty, is a set of three pictures in the same collection. The Chinese and Japanese are fond of these sets of three, in which, as in some of the triptychs of Italian and Flemish art, the subjects are distinct, though the paintings are related in one scheme of design. Here the central subject is a crane : on one side are birds and a flowering tree on rocks against which a wave breaks in foam ; on the other a small bird poises beating against the wind, which bends the strong stalks of a rose-mallow beneath and flutters the petals of its flowers. These are coloured paintings upon paper of a mellow golden tone, harmonising with the rich gold of the

PAINTING IN THE FAR EAST

brocade silk mount. They are entirely modelled on the art of Sung. But Motonobu's art is eminent in variety and versatility. In landscape, though he keeps mainly to Chinese tradition, he exchanges the solemn dream and poetic reverie of the great Chinese for a wider range of observation, for a more alert and buoyant spirit, a livelier and a swifter touch. Nor did he confine himself to the Chinese style. He married a daughter of Tosa Mitsunobu, and the alliance had effect on his art. He painted several scrolls in the Tosa manner and with the Tosa conventions, though the Kano character of drawing is apparent in details, especially in the figures. One such scroll depicts the adventures of the hero Raiko, the slayer of an ogre called the Shiuten Doji. A copy of this in the British Museum was catalogued by Dr. Anderson as the work of a Tosa painter. Motonobu was, in fact, the first to adopt an eclectic principle which in later centuries inspired many of the greatest artists of Japan. Born in 1476, he lived on to 1559. His brother Utanosuke emulated him in painting, being especially distinguished for his flower-and-bird pieces, while his son Shoyei also followed in Motonobu's footsteps with much ability. During the next few generations the Kano family was still to dominate the world of painting. But the style passed through successive phases, not unmodified by outward events. To these 1

ASHIKAGA PERIOD IN JAPAN

must return. Meanwhile in China the arts had been greatly flourishing under the first Ming emperors, and it was from the developed style of Ming that the second great generation of the Kanos took some of its chief features.

CHAPTER XII. THE MING PERIOD IN CHINA

PEDANTRY and conservatism, the ingrained weakness of the Chinese genius, begin to show their paralysing power on painting in the Ming epoch. Yet the period opened with splendour.

In 1368 the Mongols were expelled, and the first Ming emperor mounted the throne. The Chinese themselves divide the period of this dynasty into two ; and the first half, down to the end of the fifteenth century, constitutes, for painting, an age of production hardly less important than that of Sung. There is, however, a change of mood ; a change from the lofty idealism of the eleventh and twelfth centuries to a more luxurious temper, delighting in external magnificence. The ink-sketch, beloved of the Sung masters, a mode of art in which the materials of expression could almost merge themselves in the artist's thought or emotion, yielded to the sensuous charm of colour. It is true that at the opening of the period we are met by a few masters like Lin Liang (Jap. Rinriō) who still remain in the Sung tradition and prefer to work in monochrome. The British Museum has quite recently acquired a large painting by this artist,

THE MING PERIOD IN CHINA

which is almost worthy to rank with the Sung masterpieces. It is a picture of wild geese on the banks of a mountain torrent, among tall reeds. The mastery with which the ink-charged brush has expressed the forms, even to the pressure of the birds' webbed feet upon the ground, and the sense of distance in the planes, is consummate. It is an admirable lesson in the possibility of giving reality and atmosphere without the aid of shadow. Only a certain loss of grandeur and simplicity in the design removes it from the heights of Sung art. A pair of paintings of wild geese, lotus, and millet in the same collection, though inferior to this and perhaps rather to be assigned to the school of Lin Liang, are also splendidly vigorous examples of monochrome work.

Another great master of ink-painting is Wu Wei. A magnificent example of his brush has passed into the Museum from the Morrison collection. It represents a goddess or fairy attended by a phoenix, the long tail of the bird sweeping up behind her head to complete a design of singular dignity. This painting is in ink lightly coloured. But Wu Wei is best known by his pure monochromes. Two examples in the same collection may be mentioned: a man carrying faggots under trees (an illustration of a well-known story of an exiled emperor) and an angler under a willow, both large paintings remarkable for vigour of brush-line.

PAINTING IN THE FAR EAST

The new Ming style is found at its finest in another fifteenth-century master, Lü Ch'i, by whom there are several paintings in the British Museum. Especially to be noted are a beautiful pair, in the lightly coloured style, of morning mist by a river with ducks and blossoming trees, and pheasants by a mountain stream. Fenollosa considered this pair the finest examples of the master that he had seen. Flowers and birds with a landscape background were Lü Ch'i's favourite subjects; but there is a splendid pouncing cat reproduced in the *Kokka*, No. 78. In his typical work the colouring, rich and opaque, is concentrated in a few strong notes—red camellia blossoms, it may be, or pale blue convolvulus—contrasting with the warm brown of the silk ground. With the greater stress on the external appearance, texture, and colour of objects, there is less modulation of tone, less atmosphere. Decorative aims assert themselves; the artist is not so sensitive to reality, as conceived in wholeness by an interior mood of the mind.

Wen Chêng-ming, whom the Japanese call Bun-chomei, is one of the great masters of Ming landscape. Born in 1522, he died in 1567. In the British Museum (Morrison collection) is an upright landscape, with a very high horizon; mountain heights with falling torrents and green woods and winding wreaths of mist. It is a dreamy and

Plate XXVIII.
Fairy and Phoenix.
By Wu Wei.
British Museum.

THE MING PERIOD IN CHINA

romantic work, carrying our thoughts now back to the eighth century and Wang Wei, now forward to the early nineteenth century and Tani Buncho in Japan. The Museum also possesses, through the gift of Mr. George Veitch, a beautiful large painting called "The Hundred Stags." Down a gorge below cloudy peaks troop the thronging herd of deer, where no voice or foot of man intrudes upon the dewy forest solitudes. In the centre a royal stag, the patriarch of the herd, proudly emerges between two trees.

What is now to be noted is that Chinese painting begins to be more remote and less near to us than it was in the Sung masterpieces. That peculiar intimacy with nature which strikes us as so modern in the Sung painters yields to a romantic feeling in landscape; and that fine simplicity, the mark both of the manners and the art of a high civilisation, is exchanged for elaboration and ornateness.

The art of Ch'iu Ying (Kiu Yei in Japanese) crystallises these tendencies. He is an extremely popular painter in China, and imitations of his work abound. His favourite subjects were taken from the life of the court or the illustration of romances, but he also painted landscapes. One of his most famous pictures was a long roll, the original of which is lost, or at any rate not at present known,

PAINTING IN THE FAR EAST

but numerous copies exist, and one of these is in the British Museum. It depicts the occupations of court ladies. Here they are watering flowers in the garden, there in a pavilion is a group dancing and playing musical instruments; some are reading, others are gathered round a princess whose portrait is being painted. It has pretty motives, such as the bird which alights on a low bough and dips it in the surface of the moat; it is charming in gay colour, it is full of graceful figures. But if we compare it for a moment with the Ku K'ai-chih picture, we feel how far the art of China has fallen. The contrast between the feminine types in the two pictures is worth remarking. As in the case of Chao Mêng-fu, it is difficult to single out any one of the numberless pictures bearing Ch'iu Ying's name as an undoubted original by his hand. A small circular painting in the Museum of a lady at her window looking out on a moonlit landscape, seems to me to have more claim than most to be original. Its exquisite quality of handling places it far above the great majority of pictures claimed for the master. With this may be ranked a fine *makimono* acquired for the Museum with the Morrison collection.

T'ang Yin, who flourished about 1500, was a contemporary of Ch'iu Ying, and rivals him in popular esteem. He was famous for his pic-
188

THE MING PERIOD IN CHINA

tures of fair ladies, and also for his excellent landscapes.

Genre painting begins to be prominent in this period. Such subjects as the "winding-water fête," when cups were set afloat on a winding stream, and competitors, handicapped according to talent, had to compose a poem before their cup came to the point where they were stationed ; games of polo ; pedlars with trays of toys and ornaments (an occasion for revelry in jewelled colours) ; ladies looking at bowls of gold-fish, girls letting off fireworks ; the occupations of children ; such subjects as these, taken from familiar life, are frequent in Ming art, and anticipate the Ukiyoyé of Japan. Of one such subject, "The Hundred Children," there is a delightful fifteenth-century example in the British Museum : we see the roguish urchins at play, with bows and arrows and with hobby-horses, scuffling together, trying their hands at painting, enjoying a marionette theatre, and finally saying their prayers on little mats before going to bed.

At the same time the traditional subjects were not neglected, sages, landscapes, birds, and flowers, only, as I have said, with an ebb of the inspiring glow which had animated earlier and greater times. A significant symptom of decaying vitality is the progressive increase in the copying of old masters

PAINTING IN THE FAR EAST

by accomplished artists, the growing loss of independence.

Not till the Ming era can we study the painting of China with anything like adequacy of material. But the few remnants that survive of early epochs suffice to put the art of Ming into a secondary place, in spite of the many works of beauty and of splendour which the best years of the dynasty can claim.

The large painting formerly in the Olga Wegener collection and now in the British Museum called "The Earthly Paradise" sums up the matured characteristics of Ming art with great charm and completeness. Compared with Sung or T'ang painting, we are forced to admit that the workmanship lacks fibre and fineness, the mood of its conception lacks intensity and loftiness: but in itself how delightful it is! The joyous rhythm which unites the figures, the harmony of rare colours, the animation, the atmosphere of romance and discovery, of youth and experience at once, the suggested perfume of flowers upon the air, all combine to make what is, in its own kind, a masterpiece.

In 1644 the weakened empire, corrupted by the court ascendancy of eunuchs, and threatened by a rebel army, called to its aid the Manchu Tartars, wild tribes of herdsmen who had long hovered

190

唐画

THE MING PERIOD IN CHINA

dangerously on the northern frontier. The Manchus came, and they came to remain. They put an end to the Ming rule, possessed themselves of Peking, and enforced on the Chinese the wearing of the pig-tail in token of subjection.

CHAPTER XIII. THE KANO SCHOOL IN THE SIXTEENTH AND SEVENTEENTH CENTURIES

THE sixteenth century in Japan was a reign of war and chaos. Once again the great family which had seized the sovereign power and held it for two hundred years fell into impotence and decline. The fate which had overtaken the Fujiwara in the earlier day overtook the Ashikaga in their turn. As their sway grew feebler, so the strength of the feudal barons increased. But each was against his neighbour ; fighting was incessant ; the country was devastated, no man was secure. The once magnificent city of Kyoto lay half ruined : grass grew in the streets ; the common people made their tea in the precincts of the palace, where, in miserable seclusion and real poverty, the ladies of the court passed their forlorn and empty days. The Emperor himself supported a precarious existence by selling his autograph.

It is to be noted that now, as always, there was no thought of abolishing the Emperor ; his person was too sacred, his power too shadowy. But the ambition of the great barons was to obtain pos-

Plate XXX.
Pines in Wintry Mountains.
By Yeitoku.
Freer Collection.

THE KANO SCHOOL

session of Kioto, and with it the custody of the Mikado. The purpose was achieved, and anarchy arrested, by three remarkable men. Nobunaga, a man of genius for war, subdued the rival chiefs, deposed the last Ashikaga Shogun in 1573, and became military dictator in his place. Nobunaga's lieutenant, Hideyoshi, famed as Japan's greatest man of action, succeeded to his power, and brought the whole country under one rule. Not content with this achievement, Hideyoshi, who had risen, like Napoleon, from obscurity, aspired to further conquest. He dreamed of conquering China also ; he invaded and laid waste Korea ; but his grandiose schemes were frustrated by his death, two years before the century closed, and his troops were recalled to Japan. The third of these commanding historic figures is Iyeyasu, the inscrutable, strong statesman who consolidated the work of Nobunaga and Hideyoshi, kept the feudal barons under strict control by his politic measures, made a new capital in Yedo, on the eastern coast, and founded the line of Tokugawa Shoguns which held power till the revolution of 1868.

The invasion of Korea revived intercourse with the continent, and the severe simplicity of Ashikaga taste was supplanted by the vogue of the now mature Ming style of China, with its rich colour and ornament. The style appealed to the new nobility

PAINTING IN THE FAR EAST

who had risen to power with Hideyoshi. Untrained in the fine culture of Zen philosophy, they could appreciate gorgeous decoration, but were indifferent to the subtle beauties of an ink-sketch by So-ami or Sesshiu. Kano Motonobu died in 1559. But he left a successor of genius in his grandson Yeitoku ; and it was Yeitoku whom Hideyoshi commissioned to decorate his newly-built vast stone castle of Osaka. It was an age of castles. The most renowned for its splendour was the castle of Momoyama, near Kioto, on the decoration of which the finest art of the age was concentrated. The daimios followed Hideyoshi's example, and all through the country rose castles, furnished in the same gorgeous style.

Yeitoku was trained in Motonobu's school, and inherited the lofty traditions of Ashikaga painting. Hence a style that might easily have fallen into vulgarity and parade preserved in his hands weight and grandeur. This second phase of the Kano school appeals perhaps more to European taste than either the earlier or the succeeding phases. The typical masterpieces of Yeitoku and his pupils were immense screens, decorations on walls or sliding panels, painted in opaque pigments of rich colour on gold leaf. The effect was one of extraordinary magnificence. When Hideyoshi made a public procession, screens were set up along the

THE KANO SCHOOL

road for miles together; and Momoyama castle was famed for its "hundred sets" of them. Like Rubens, Yeitoku worked with a large light brush and rejoiced in the designing of huge pictures, with gigantic pine-trees and more than life-size figures. Like Rubens, he supervised the work of a crowd of pupils, and even so the demands of the nobles could hardly be supplied. There was a fever of decoration. Yet nothing could surpass the stately impressiveness of Yeitoku at his best. He painted horses in their stalls or in the freedom of the solitary hills, tigers menacing and irresistible, fabulous lions of strange but royal aspect, birds of rich plumage on forest boughs, fawns flying from the retreat of tall waving grasses, heroes and princesses of old Chinese legend, and superb landscapes. It is significant how fond he is of portraying scenes from the story of the T'ang Emperor, Ming Huang, and the lovely and ill-fated Yang Kuei-fei. It is as if he hungered to recall that time when, for a brief moment, Beauty, not riches, empire, conduct, or conquest, was the supreme passion, and poetry, painting, and music were of more account than statesmanship, war, or commerce. Many screens, by the master or his pupils, depicting scenes of that old court and its poetic revels, are in the Boston Museum and in the Freer collection. Boston also has a splendid pair in monochrome

PAINTING IN THE FAR EAST

of dragon and tiger. But finest of all and most typical of Yeitoku's grave force and monumental design is the Pines in Mr. Freer's collection, here reproduced. How simple are the elements that compose this picture; the great pines, the mountains, the snow; but what a sense of vastness, of majesty, of solitude! A certain solidity of effect allies such work as this to the masterpieces of Europe; and in its own kind I do not know where we shall find painting to surpass it, whether in Japan or in the West.

Yeitoku's greatest pupil, Sanraku, came near his master, but is perhaps less famous for his rich screen-painting than for his work in the pure Kano style, lightly tinted or in monochrome. For the style of Momoyama—the name of the palatial castle has been given to the period—was to last for no long time. The art of the Kano family, still gloriously persisting, began to revert to its earlier tradition, and refreshed its strength in the next generation with the advent of its third sovereign master, Yeitoku's grandson, Tanyu.

Sanraku, as we shall see later, helped to inaugurate, in certain paintings of popular life which he did not sign, the beginnings of that school of genre, called Ukiyoyé, which was to flourish so exceedingly in the eighteenth century.

One of his pupils, Sansetsu, who died at the age

Plate XXXI.
Rain.
By Sansetsu.
British Museum.

THE KANO SCHOOL

of sixty-three in 1652, must be mentioned. Sanraku adopted him as his son, and he proved worthy of the finest traditions of Kano. Something of antique simplicity gives character to his work, and links him with the older masters rather than with the looser swing and dash coming into Kano style during his lifetime with Tanyu's ascendancy. A fine example in the British Museum, here reproduced, is a masterpiece of impressionist rendering of a downpour of rain drenching the lake shore and blotting the mountain peaks.

Tanyu was born in 1602. And now with the seventeenth century Japan enters on the long and profound peace which lasted under the Tokugawa rule for more than two centuries and a half. As before in the days of the Fujiwara, this singular nation again closed itself to the outer world. Foreign intercourse was prohibited. By an order of the third of the Tokugawas, Iyemitsu, all large ships on the coast of Japan were destroyed. War and politics were no longer the predominant interests. Amusement in every form became more and more the engrossing occupation. The policy of the Tokugawas was to promote unity of government; the power of the feudal lords was to be restricted; and to this end each of the great daimios was required to spend half of the year in the new capital of Yedo in attendance on the Shogun. As

PAINTING IN THE FAR EAST

a consequence the city grew swiftly in size and in splendour. The populace woke to consciousness of their past in the nation, and the industrial arts flourished as never before.

The seventeenth century was remarkable in painting chiefly for the new movements which were being originated, both in regard to subject and to style. It saw the beginning of genre painting in Matabei, founder of that school which in the next two centuries became the special art of Yedo, and produced that marvellous mass of colour-prints so prized by the collectors of Europe. It saw also the rise of the magnificent school of decorative painting and lacquer design culminating in Korin. But before considering these new movements, let us see how the Kano tradition was being upheld by the successors of Masanobu, Motonobu, and Yeitoku.

In Tanyu and his school the long line of Kano enjoyed its last period of glory, only to fade into academic futility with the advent of the eighteenth century.

The ideal of Iyeyasu, the great founder of the Tokugawa dynasty of Shoguns, was simplicity. And this ideal partly explains the reaction in Kano painting from the gorgeousness of Momoyama. But though Iyeyasu may have desired a return to the refined severity of Ashikaga culture, the

THE KANO SCHOOL

temper of the times was against him. The nation gained in awakening consciousness of unity. But the very policy of the Tokugawas, which obtained peace at last for the long-devastated country by vigorous exertion of authority, promoted a state of things inimical to the austere art which Zen teaching had inspired in times of material peril and disaster. Before the end of the century, in the famous period of Genroku (1688-1704), the life of Yedo was a sort of carnival of amusement and luxury for a people no longer allowed by circumstance to participate in the strenuous interests of politics and war.

The mood of Ashikaga times was not to be recovered. That exquisite fabric of art and manners, which only a long tradition of study and religious thought could have prepared, could not survive the great upheaval through which Japan had passed without some inner change. We feel the change when we pass from a painting of Masanobu to a painting by Tanyu. There is a loss of spirituality, an element of display.

Tanyu is a painter born, a master of the brush who exults in his mastery. The virtuosity which displays itself in much of his painting may lead us into thinking of him too exclusively as a marvelous executant, lacking in the rarer emotional and imaginative qualities. Yet he can touch lofty

PAINTING IN THE FAR EAST

heights. Few have evoked a nobler image from that poetic subject dear to the painters of Japan, Kwannon, the goddess of love and mercy, seated by the wild sea-shore on a rock where the water breaks in foam tossed up even to the hem of her garment; an image of heavenly serenity throned above the tides of trouble and of passion; or Monjiu, the deity of wisdom, a face inscrutable, a gaze profound with the intensity of thought, rising tranquil, with dark, smooth hair, as if from mists of contemplation. But it is in landscape that Tanyu achieves his peculiar triumphs. A well-known early masterpiece in a Japanese collection is the "Fuji from Kiyomi Bay." Still finer is the grand pair of screens in the Freer collection, where Fuji towers up remote in the distance, while in the foreground a solitary reed-bed shivers in the wind. The growing national spirit shows itself in the choice of a Japanese landscape by a painter of the school which had repeated for generations themes borrowed from the classic landscape of China, and disdained the beauties of their native land, much as the Roman Campagna imposed itself, after Claude's example, on the imagination of those landscape painters of Northern Europe who aspired to a classic style. Of Tanyu's Chinese landscape no better example could be found than the fine *makimono*, acquired with the Morrison collection by the British Museum.

THE KANO SCHOOL

This seems to have been painted in emulation of Sesshiu's most famous landscape roll, and betrays that master's influence in the tremendous boldness of the strokes, contrasted with great spaces of empty air and flowing water.

Even more magical is the painter's use of Chinese ink on the screens in the same collection where immense distances of mountain, shore, and sea retreat in impalpable veils of air ; on nearer heights a clump of trees has been created with a swift and sudden turn of the wet brush—shapeless it seems, yet it is there, a living thing : out of a misty hollow rises a temple from which the bell, one knows, is sounding in mellow tones ; over remote reed-beds come wild geese in trailing flight ; a whole panel is blank except for a pale round glimmer—the moon. The materials used—the expanse of absorbent, self-toned paper ; the ink, now melted into the surface in faint wide washes, now flung in vivid blot or splash, now shaping a mountain's contour with exquisite certainty—these materials seem to have merged themselves into mere expression as words fit thoughts. How large, how liberating the effect ! What exhilaration in this sense of ease, this joy of mastery !

It was this easy, fluid confidence of Tanyu's brush which enchanted succeeding generations and seduced them to their ruin.

PAINTING IN THE FAR EAST

Tanyu was the eldest of three brothers. The other two, Naonobu and Yasunobu, were both distinguished painters. Naonobu especially, a gentler nature than Tanyu's, is a master of monochrome and the art of reticent suggestion, admirably seen in a set of three paintings, of Hotei with a bird on either side, now in the British Museum. Yasunobu represents the Kano school in a more academic vein. Naonobu's son Tsunenobu ranks as the ablest follower of Tanyu, and has left many accomplished pictures, though they betray less original force of mind.

A pupil of Tanyu who rose to independent rank was Morikage. Little is known of him save that he was poor and had little popularity. His instinct for delicacy and refinement of workmanship marks him out in an age that loved splendour and bold execution.

Among the pupils of Yasunobu was a still more remarkable painter, Hanabusa Itcho (1652-1724). His originality soon declared itself, and caused a rupture with his masters. Itcho, though he always retained the traces of his Kano training, created a style of his own, in which he gave rein to his strong sense of humour and a vein of mocking wit. In 1698 a painting of his gave offence to the Shogun, and he was sentenced to banishment for twelve years. Even in landscape subjects Itcho reveals the light

THE KANO SCHOOL

and witty handling congenial to his temperament. But the significance of his art lies rather in his preference for subjects from popular life, which was beginning to be illustrated in such profusion and with so much charm by the artisan school of Yedo. That school, however, derived its first inspiration from an offshoot of the aristocratic schools, and its origin goes back to painting of much earlier times.

CHAPTER XIV. MATABEI AND THE BEGINNINGS OF GENRE

THE close of the fifteenth century in Europe saw the beginning in Italian art of the painting of scenes from daily life which we call genre. Before that time painters had confined themselves to the set subjects of religion, allegory, war, mythology, portraiture.

The inventor of genre painting for Southern Europe—in the North certain lost pictures by Van Eyck created a similar tradition—was Giorgione. An atmosphere of mystery and fascination haunts the name of the poetic Venetian, to whom so few works can actually be assigned, though so many have passed under his name—a fact testifying to the peculiar fruitfulness of his genius, which, though not eminently productive in quantity of work, was yet so rich in inspiration both for contemporaries and for the future. Those themes of beauty which Giorgione discovered in the favourite pleasures of his own Venetians—their summer picnics among the wooded hills, to which music lent a heightened charm of feeling or of reverie—were the Italian prototype of all the long array of Dutch genre pieces, where the sunny, open-air pleasures of the

MATABEI

South have given way to the interiors of the North, with stray beams of sunshine adding some touch of pensive charm and suggestion to shadowy corners and familiar furniture, some glorifying caress to the common things of home. In Watteau and his followers, again, the same type of art is born anew under different conditions, and removed by one degree from actuality ; while in Chardin it reverts to homeliness, infused with a refined and heightened sense for beauty.

Ukiyoyé is the Japanese equivalent of genre. " Pictures of the fleeting world " it means, a term of Buddhist origin, coloured with the Buddhist reproach of all that appeals to the senses and belongs to the transitoriness of miserable mortality. But in time the word lost this colour. Applied originally to painters of daily life, on account of the subjects they preferred, it came to mean a recognised style, and the artists of the school were known by that style even when they painted landscapes, flowers, battle scenes, on any of the recognised subjects of the older schools.

Matabei, the originator of *Ukiyoyé*, holds a place in the art of Japan analogous in more than one respect to that of Giorgione in Europe. Numbers of paintings pass under his name, but very few can really be claimed for his brush, and scarcely any are authenticated. Various and contradictory

PAINTING IN THE FAR EAST

accounts of him have been handed down, and there have not been wanting native critics to deny his very existence. Quite recently, however, the real facts of his career* have been brought to light, and his identity fully established. Matabei's family name was Araki. His father was a lieutenant of Nobunaga, and having rebelled against his master was forced to commit suicide. Matabei, who was born in 1578, was then a baby of two, and was carried off in safety by his nurse to Kioto, where she procured his adoption into the related family of Iwasa. He became known as a painter, and as his reputation grew he was summoned to Yedo, and worked there for the Shogun. He died at Yedo in 1650. His eldest son, Katsushige Gembei (d. 1673), also painted; and Gembei's son, Koreshige, continued the family tradition in a weaker style. There were other followers who painted genre. To the productions of all of these the name of Matabei has been vaguely attached. The genuine work of the master has, however, decided characteristics of its own. He affected, especially in his women, a peculiar type of face, short in the nose, but with long, full cheeks and rounded chin. His design is notable for the simplicity of its contours, his brush outlining the figure with sweeping lines which are yet supple, sensitive, and expressive of the form

* First published by Mr. Arthur Morrison in the *Monthly Review*.

MATABEI

within them. With great naturalness of pose and gesture he has a profound sense of style, and swiftly seizes essentials. There is something rare about his art which matches the scarcity of his productions. Of these, some of the best authenticated are a set of paintings of the Thirty-six Poets, signed on the back and dated 1640. Here the painter describes himself as "belonging to the lower stream of Tosa Mitsunobu," a description which indicates how he regarded himself, as a painter of the Tosa tradition who applied the Yamato style to a lower kind of subject than the artists of the court. These Thirty-six Poets followed, indeed, the Tosa treatment of such portraiture, though with a new vitality supplanting the old stiffness. But Matabei's distinctive genius is far better seen in a set of four pictures of men and women playing games, painted on a screen, as a part of the wedding portion of a Tokugawa princess. One of these was shown among the Japanese treasures in London in 1910. Here we see what a powerful originator he really was. The Tosa style, long ago in the thirteenth century, when Keion and Mitsunaga wielded the brush, so apt and free in depicting groups from the actual life of Japan, had frozen into utter formalism. The Chinese style, on the other hand, with its vigorous brush-work—never more vigorous than in the hands of Matabei's younger contemporary, Tanyu—was ill adapted for

PAINTING IN THE FAR EAST

Japanese subjects. Matabei had learnt both styles. He could paint goddesses with the long flowing lines and soft light tints of the classic masters ; he could sketch legendary heroes in washes of ink. But in fusing the two elements into a manner of his own Matabei escaped the ordinary fate of eclectics. There is nothing in him of the tameness that so often attends the calculated attempt to blend a variety of qualities, such as we find in the Carracci. On the contrary, there is a sort of primitive fire in his painting. All his qualities are native to him ; there is nothing taken on from outside. Nor was he tempted, as many leaders of revolt have been, into the violence of reaction from accepted type. There is the centred strength of balance in his art. His was a truly original genius, in that what he expressed in his painting was entirely his own : had there been no novelty in his art, his originality would not have been less. Nothing is more entirely Japanese in its beauty than the beauty discovered in life by Matabei. Perhaps these may seem extravagant words when we contemplate the artist's few extant works. But it is with him as with Giorgione ; we feel him a power working in the life of art, perhaps even more in the production of others than in his own.

Matabei was called Ukiyo Matabei by his contemporaries, from the subjects of his pictures. But

MATABEI

though he was the first to devote all his powers to genre, there were painters before him of the aristocratic schools, both Kano and Tosa, who had painted genre subjects occasionally. The earliest known example is a screen by Hideyori, a son of the great Motonobu. Kano Sanraku is known to have painted in this style, and some have suggested that he is the author of an unsigned work, called the Hikone Screen, which is at any rate the work of a master. This is, in a sense, the most important of all the productions of the first phase of Ukiyoyé, and rivals in beauty the work of Matabei, under whose name it has long been known, though the types of face, with strongly-marked lines and small chins, are totally distinct from his. It is painted on a gold ground, like the screens of Yeitoku and Sanraku. It represents men, women, and children amusing themselves: some are painting, some reading, some playing on musical instruments, others playing "go." The figures are full of life and character—note especially the face of the blind man playing the samisen—yet at the same time it is a wonderful piece of decoration, finely spaced, and with a rare sense of beauty in silhouette.

Tosa artists also painted genre, though nothing could show more clearly the febleness into which that school had declined than its inability to take up a mode of art so suited to its genius and tradi-

PAINTING IN THE FAR EAST

tions. The work was left for a new school, for painters of the people, painting no longer for an aristocracy, but for their own class. To them we must return in time. For the present we must see what other movements were taking place, and what changes were working among the older schools.

CHAPTER XV. THE GREAT DECORATORS

AS the power of Michelangelo proved the ruin of the Florentine school, which could not match his force yet could not help following in his wake, so the power of Tanyu dissolved the art of Kano, though in the school of Tsunenobu the great tradition was for a time not ingloriously prolonged. The Kano family continued to hold official rank in the Shogun's court, while at Kioto the Imperial house fostered the line of Tosa. But the old inherited styles tended to break up or merge in one another. Mitsuoki (1617-1691) revived something of the old fame of Tosa in his delicate and distinguished art, but his subjects were taken often from the themes of Chinese art; he was specially renowned for his paintings of quails. The same tendencies appear in a branch of the Tosa school, the Sumiyoshi, which had come into prominence. More significant for the nation, however, was the work of independent artists. Among those who remained at Kioto when the new capital was founded was a remarkable man who inaugurated a new style in decorative work. This was Koyetsu. His family, the Honnami, were experts in all that relates to the manufacture of swords. The sword

PAINTING IN THE FAR EAST

is more than a mere weapon in Japan. It is "the soul of the samurai," and by far the most valued of his possessions. The sword-smith must be a man of high character and pure life ; the forging of the steel was done with religious rite and ceremony, and the sword itself came to be regarded as a sort of other conscience, an ideal by which a man should test his life. Blades by one of the most famous makers are priceless. Forgeries have always abounded ; and Koyetsu is known as the first expert whose authority on a question of genuineness was universally accepted as final. In painting, Koyetsu was a pupil of Yusho, chief of a branch of the Kano school. Then he studied the old Tosa masterpieces. His own style is an independent one. It is not as a painter that he acquired his greatest fame ; it is as a lacquerer and as a master of calligraphy. He created a new mode of lacquer-work by the employment of lead, tin, and shells in decoration. He was a student of the Zen doctrine, was an adept in the Tea-ceremony and in landscape gardening, and lived a life of lofty seclusion. He died in 1643.

But though his painting is so rare, it is intensely original. Fenollosa was the first to recognise its high importance, to vindicate Koyetsu's claim to be the greatest of the wonderful group of artists we are now to consider. If it were only by this group,

THE GREAT DECORATORS

Japanese painting would take rank among the supreme achievements of pictorial design. In the hands of Korin and his followers, the peculiar design evolved by the school takes on a more abstract character ; but in the art of Koyetsu, as seen in the screen from the Freer collection which is here reproduced, there is an exuberance of sap and growth which gives it a richer savour. It is full of the suggestion of the depth and luxuriance of Nature.

With Koyetsu is associated another man of genius, his friend Sotatsu, each perhaps deriving an element of inspiration from the other. The two sometimes worked together on a single *makimono*, Koyetsu adding specimens of his beautiful writing to Sotatsu's paintings. Little is known of Sotatsu's life. But his works reveal a consummate gift for design, as well as a marvellous delicacy of touch and feeling. The significance of the achievement of Sotatsu and Koyetsu lies in their revival of the glory of colour which had been an integral part of the old Yamato painting. The now decaying Tosa line was no longer capable of expressing ideas by colour. Mitsuoki was deserting the rich colour-schemes of Tosa for the light tints of Kano. Sotatsu and Koyetsu, who had studied both styles, evolved a style which has its roots in Tosa principles of design and keeps the rich Tosa colour, but their brush-work has the nervous force of the Chinese tradition, and their art breathes

PAINTING IN THE FAR EAST

the pure and lofty tone of Ashikaga. Technically, Sotatsu was an innovator. He mixed gold with his Chinese ink, adding a hidden lustre and rare gleam to grey and black. The leaves of his flowers are often veined with gold. As in the old Tosa scroll-paintings, his flowers are simplified, detached, almost symbolic, yet full of life and sap. He was fond of effacing the ground ; we see shoots of bamboo and young fern-fronds springing up from space. The tendency of his design was to modify the old linear method, and to work less by line than by mass. His typical masterpieces are screens overlaid with gold or silver leaf, on which the pigment is gorgeously encrusted. Poppies blazing on a broad golden field of quivering sunlight or flowers that glimmer with colours dipped in beams of a moon of unearthly splendour are made into designs that fill their space as majestically as the great figure-compositions of Europe. Sotatsu's magnificence of colour, which loves broad spaces of lapis blue, and exults in crimsons, emerald, and purple, keeps always a stately dignity ; a marvellous sense of measure holds all the elements of his art in balance. What strange masterpieces he could make of simplest things we see in a pair of screens which have for subject nothing but clothes-horses. True, the clothes which hang on them are of sumptuous brocade ; but it is the spacing above all which shows the

THE GREAT DECORATORS

master and makes beauty unexpectedly to appear. He painted also in monochrome.

The fame of Sotatsu and Koyetsu has been unduly overshadowed by the fame of their follower, Korin. Korin is one of the few artists of Japan who is known in Europe ; known, it must be said, chiefly by the innumerable imitations and forgeries which pass under his name. But in our admiration for this wonderful master we must not forget how vast a debt he owes to Sotatsu and to Koyetsu both in painting and in lacquer-work. The peculiarities in design and brush-work which mark the painting of Sotatsu are all found again in Korin, though in him the style has become more conscious and more concentrated. His temperament is less grave ; it has something defiant in it. Sotatsu's art had its roots in the old art of Tosa, the national style of Japan, but was developed by him into freedom, breadth, and suppleness. Korin carries the style to climax and extreme, so that in him we see the distinctive essence of the Japanese genius in final flower. He is perhaps the most Japanese of all the artists of Japan. It is because his art sums up so much that the style which actually was originated by Koyetsu and Sotatsu bears the name of Korin.

The decorative genius that flowers in the painting and in the lacquer of this school was perhaps the boldest and most fertile that the world has seen.

PAINTING IN THE FAR EAST

“Decorative” is a term that carries with it to our ears associations of what is abstract, systematised, restful in art; it does not suggest the stimulating qualities, the energy and daring, of Korin.

✓ In Europe we talk of decorative art as different in kind from pictorial art, but in Japan the division is hardly apparent. Decoration must always be governed in idea by architecture. Now in Japanese architecture it is a group of forms rather than a single form, and the whole surroundings of a building rather than the building alone, which is considered. Not only is a harmonious site carefully chosen, but the material surroundings may be artificially altered to harmonise with the building. It is, so to speak, a landscape conception of architecture, just as a landscape idea controls the figure-painting of Japan. Thus, while our architecture triumphs in massiveness and concentration, and controls thereby the instinct of designers toward the rigid and symmetrical, the lightness of Japanese buildings, which are made to belong as if by right of natural growth to their surroundings, and to melt their beauty into the beauty of the groves and hills, this lightness of structure—not wholly to be explained by the frequency of earthquakes—invites and fosters the designer’s instinct towards delicacy and naturalism in decoration. We have seen that when for the first time massive stone

THE GREAT DECORATORS

castles were erected by Hideyoshi and his barons, a decorative style of painting arose which is more massive in character than anything else in the pictorial art of Japan, and begins to have affinity with the art of Europe.

In the Korin school we find the same style of design used both in painting and applied art. But Japanese decoration never hesitates to use pictorial motives. We know from experience that European decoration is rarely able to dispense with symmetry or a geometrical basis, whereas the Japanese will decorate a lacquer box with a moonlit landscape, and wild geese flying across the sky, and we feel that it is in perfect taste. The truth is, that European painting since the Renaissance has been so much occupied with the problem of representing depth and relief that pictorial motives have to a great measure lost touch with the primary motive of decorative design. We now associate decorative art with design from which the representative and imaginative elements have been almost discarded. In Japan there has never been this divorce, because the cast shadow has never been admitted into painting, and illusion never aimed at. Hence the decorative motive has never been absent from Japanese pictorial art. Decoration does not confront the Japanese with a new and different problem from painting. They have been able to discard symmetry

PAINTING IN THE FAR EAST

as a geometric basis, and to found their decoration on the same subtle principles of balance which underlie European painting. People often talk and write as if Japanese design was mere felicitous caprice and irregularity. On the contrary, it has science as well as taste behind it. The national cult of *ike-bana*, or flower arrangement, shows us how intense has been the Japanese study of balance in the living growth of plants. Rodin, who says, "Balance is the pivot of art," has studied both natural forms and the human body from the same point of view. Japanese design inherits the training, bred to instinct, of centuries of study and observation, and the efforts of modern artists in Europe to achieve the effects of a Korin merely by imitation from the outside expose to ludicrous result their total insufficiency.

To the special qualities of buoyancy, clearness, delicacy, which belong to the character of the Japanese and are inherent in their art, Korin adds something more: a frank audacity, a gaiety that is almost arrogant, a confident challenging note. He satisfies the eye, but he stimulates and stirs rather than soothes. His art is conceived in the Dorian mood. His brush has the trenchant movement of a sword held in a nervous grip. Something fiery and abrupt informs his design and gives strangeness to its beauty. He has a way of getting to the bare elements of expression. His figures,

Plate XXXV
Wave Screen.
By Korin.
Boston Museum.

THE GREAT DECORATORS

like Daumier's, will sometimes be concentrated into one great gesture. Like all his countrymen, in painting flowers he is interested above all in their growth, the charm of their springing lines, careful neither to pervert them nor to tame them into adumbrations of, or embroideries upon, a geometrical pattern. But more than this: his genius seizes and expresses the force of their growth, the force of the straight-shooting iris blades, of the bamboo shoots which burst up even through the frozen sod. Thus the irises of a famous screen standing sharp against the gold ground impress us at once with a sort of architectural quality as decoration, and with a vivid sense of life and the power of life. He was fond of painting wild waves—blue, rearing, crested waves tossed up on a gold background: decorative again, superbly decorative, and conventional if you will; but, looked at long, they seem to grow into a strange and formidable reality of their own, such as might haunt the midnight visions of one whose life had tasted deeply of the terror and the beauty of the sea.

In his half-humorous painting of the Thirty-six Poets, grouped together in a single picture, one notes the extraordinary skill of arrangement, and also the characteristically Japanese composition, held together by the play of relations between the figures, no one of them forming a centre or focus.

PAINTING IN THE FAR EAST

As a painter, Korin must yield to the greater Koyetsu and Sotatsu. His supreme triumphs, perhaps, are certain lacquer boxes of classic fame, decorated with lead and mother-of-pearl. Simple, rude, and careless may seem the design at first blush ; yet how it continues more and more, as we look, to attract and impress ! There is something quint-essential about the art which with such bare elements as these—a leafing spray, a temple gateway and its grove of pines, shown in rudiment and symbol--has power at once to stimulate, surprise, and satisfy like a medal by Pisanello.

The influence, through Korin, of the style of design originated by Koyetsu upon applied art has been immense. Not less distinguished than Korin's work on lacquer was that of his brother Kenzan on pottery. Kenzan's design is allied to that of Korin, but he is often fond of pliant twisted sprays where his brother prefers more massive and straight growths. Kenzan was also a fine painter, though his pictures are rare.

The splendid hollyhocks of our illustration, though it does not betray his special idiosyncrasies, may stand as a typical example of the flower-painting of the school.

Korin and Kenzan were sons of Soken, a pupil of one of Koyetsu's pupils, and their family was connected with that of Koyetsu ; but Korin was

THE GREAT DECORATORS

not, as has been asserted, himself trained under the older artist, who died, in fact, in 1643, whereas Korin was not born till 1661. Korin was a pupil in painting of Kano Tsunenobu (or, as some say, Yasunobu) and of Gukei, a painter of that branch of the Tosa school which is called Sumiyoshi. He worked in Kioto, but was expelled from the city on account of what was thought his wasteful luxury. The occasion was this. The artist accompanied two bankers of Kioto on an excursion to view the cherry-blossom. At noon the bankers brought out their luncheon from beautifully decorated luncheon-boxes. Korin produced his, wrapped in fibrous sheathing of bamboo ; but the wrapper was covered with gold-leaf on which was an exquisite design. Having finished his luncheon, Korin threw the wrapper away. The shocked men of business reported the incident, and the artist was bidden to leave Kioto. He took up his abode in Yedo, but in time returned to the old capital. He built a tea-room for the Tea-ceremony in a garden which he filled with curious and beautiful plants, and used to spend entire days watching the unfolding of the buds or the falling of the leaves.

The Genroku era, in which Korin lived, was one of unparalleled luxury and magnificence. New designs and patterns for stuffs and dresses were in continual request, and Korin delighted to improvise

PAINTING IN THE FAR EAST

some novel idea in decoration for the dresses of fair women. We read of parties at which the ladies withdrew and returned seven or eight times, appearing each time with a different dress, always of the same colour, but always with a new design.

Never, perhaps, in history has there been a time so rich in fantastic gorgeousness. And over it all, disseminating the seed of its strange beauty, played the fire of Korin's genius.

CHAPTER XVI. NEW MOVEMENTS IN THE EIGHTEENTH AND NINETEENTH CENTURIES

THE slow, gradual, but steady ebb of animating glow and vigour, which had set in on Chinese art during the Ming period, continued into the eighteenth century, and has continued apparently to the present day. Not that admirable pictures were not produced in great numbers ; what was wanting was not skill or taste, but the fresh transforming impulse which inspires men to see earth and heaven with new eyes, an impulse needing, perhaps, to come from some deeper movement in the nation's life ; and no such movement came.

The weakness of Confucianism, its inclination to fixity and to establish over the mind a despotism

Heavy as frost and deep almost as life,

became more and more visible ; and no new stirring from without, such as Buddhism had brought, was at hand to rescue the degenerating genius of the nation from itself. Admiration of the past had become idolatry. When a man achieves distinction in China, and is ennobled, the honour does not descend to his posterity, but is conferred on so many

PAINTING IN THE FAR EAST

generations of his dead ancestors. So too in painting men's faces turned to what was gone before, careless of what was to come after. Want of faith in the future paralysed to a great extent the energies of the present. With aspirations thus turned backward, it was remarkable that China could still produce so many artists and so much good work.

When our knowledge of the art of the present dynasty has become more definite and tangible, it may be possible to distinguish the influence of outstanding personalities and to gauge their worth. Prof. Hirth has collected a great deal of information about these painters, and from him we learn something of certain individual men whose names stand high in the esteem of their countrymen. Such are the four landscape painters called Wang, who flourished at the beginning of the dynasty. But in a book of the present scope we are concerned less with individual names than with general movements. And this period was the reign of the Southern school.

Far back in the eighth century and the great times of the T'ang dynasty, the poetic artist Wang Wei, we saw, originated the Southern style in landscape, of which a later phase was the so-called Literary Style. The votaries of this school ranked the inspired and careless sketch of a literary amateur above the finest technical mastery. Subjective

NEW MOVEMENTS

merits only counted. It was in a sense a return to the ideas with which the famous Zen sect had inspired the slight ink-painting of the Sung period in China and the Ashikaga period in Japan. But it was a return which pushed those ideas to caricature; and at the back of it was no longer the lofty atmosphere of religious aspiration, having its counterpart in life and conduct, but a dilettantist spirit not averse to fostering a fashionable craze.

The movement has its interest and significance as being a last effort of the Chinese genius to throw off the yoke of too rigid academic formula and prescription. But, deriving no fresh element to support and nourish it from without, it took the curious form of depreciating everything in a painting which had obvious technical power. It not only encouraged excessive slightness of execution, but affected weakness and incoherence in brushwork, in revolt from the accepted supremacy of the strong and rhythmic line of the classic schools. Something parallel may be found in a phase of recent French painting, where an effort towards sincerity and reaction from the formulated style of academic drawing shows itself in a calculated roughness and clumsiness of touch, and a horror of beauty in pigment. But, in conformity with the instinct of the West, this movement is allied with a scrupulous naturalism. In China, on the contrary, the move-

PAINTING IN THE FAR EAST

ment allied itself with the association of literature. Europeans, therefore, are hardly capable of appreciating whatever charm this kind of painting possesses.

It is probable that, from want of knowledge, we underrate the Chinese artists of the eighteenth century. Certain it is that from them their Japanese contemporaries received no insignificant stimulus.

At the close of the Ming dynasty many a refugee from China, mostly scholars and priests, refusing to accept the Tartar rule, found a home in Japan, where the study of the Chinese classics was now a reviving enthusiasm. Chinese painters also arrived, bringing with them both the literary style and the decorative coloured style of the later Ming. They worked at Nagasaki, the one open port, and Japanese artists flocked to learn from them. The most important of these men was Chen Nan-Ping, a painter not, it is said, uninfluenced by the realism of European art, whose vigorous and graceful pictures of birds and flowers evoked enormous admiration and were greatly imitated. Chen Nan-Ping arrived at Nagasaki in 1731. The literary style, too, was introduced, and was able to renew itself by an alliance with the movement towards naturalism now prevalent.

What were the conditions of art and society in Japan at the time of this invasion from China?

On the one hand, there was the teeming city

Plate XXXVI.
Hollyhocks.
By Kenzan.
(From the *Kokka*)

NEW MOVEMENTS

of Yedo, dominated by the vast castle of the Shogun, with its many moats, as its population was dominated by the rigid Tokugawa rule. Yedo art was sharply divided. The official Kano painters of the court, whose mode of work was prescribed by fixed authority, starved on lifeless academic formula and routine, and produced little that was not merely an imitation, more or less clever, of Tanyu or Tsunenobu. Despised by these feeble representatives of an old and great tradition, the multitude of Ukiyoyé painters and colour-print designers, men of the artisan class, were illustrating, in innumerable woodcuts, the life of the populace and the drama of the popular stage. Cut off from the life of the nobles and the samurai, they created a world of art, beautiful in its kind, which is self-enclosed, and has but little relation with the ideals of the older schools. This thriving popular school we will leave for a while and turn to the ancient capital of the Mikados—to Kioto. Here the power of the Shoguns was less openly exercised; and as the growing elements of revolt against the Tokugawa policy and discipline, even against the Shogunate itself, gathered at Kioto, so too at Kioto we find the most vigorous and independent artists.

It was the painters of Kioto who responded to the new current of ideas flowing through Nagasaki from China.

PAINTING IN THE FAR EAST

Thus we find Riurikio refining on the decorative colour of later Ming, while his pupil, Ikeno Taigado, takes up the light, loose, faintly tinted style of the Southern school. Buson also works in the Southern style, painting Chinese landscapes or deer in mountain solitudes, but with an added force of naturalism. And in Buson's pupil, Goshun, the strain of naturalism becomes predominant. This was only in accordance with the temper of the time. Goshun, dissatisfied with Buson's teaching, betook himself to another master, who gave him advice though he did not actually admit him as a pupil. This other master was Maruyama Okio, the most famous painter of the age.

Okio was born in 1733. He was the son of a farmer, and as a child showed a passion for drawing. He studied the styles of all the older schools, and some of his best paintings are inspired by the ancient masters; but his mature and characteristic work is in the style which he himself invented. He copied European engravings with his brush, and aspired to infuse a greater spirit of realism into the art of his own country. Compared with what we call realism in the West, Okio's innovations seem to have little claim to such a title. Yet we recognise in his art, along with acceptance of the conventions which Asiatic painting had never discarded, a new particularity and precision. He observed

228

NEW MOVEMENTS

nature keenly ; and no painter surely was ever gifted with sight more sensitive or more searching. A hand which had almost miraculous control of the brush was at the service of a vision of exquisite lucidity.

“ Nature nerveuse, fine, et froide,” he is happily characterised by M. Hovelaque. In his detachment, his marvellous eyesight, his fine taste, he reminds us of Velasquez. Not without that coldness of temperament, perhaps, could Okio have achieved his singularly unruffled masterpieces. A sweet playfulness comes out in him when he paints his delightful pictures of puppies, a favourite subject ; but he rarely communicates his mood. He is capable of grandiose conceptions, as in a celebrated pair of screens depicting the River Hodzu, a torrent pouring down a rocky valley, or as in the series of “ The Seven Calamities,” in which the elemental terrors of flood and earthquake are depicted with immense power. A famous Waterfall, with fragile green boughs contrasted with the plunging mass of water shattered on rocks below, was shown in London in 1910. But the finest specimen of Okio’s art that I have seen is the monochrome sixfold screen in the Freer collection, where two wild geese are winging out to the pale empty distance over a sea that ripples on solitary sands and is lost in a vast horizon. Yet Okio never affects us

PAINTING IN THE FAR EAST

as the masters of the Ashikaga period affect us : we feel the difference of import, of all that lies behind a work of art in the recesses of thought, reverie, spiritual ardour, and desire. Okio is too absolute a master of his means : he is no longer the wooer of beauty, but the sovereign, dispassionate observer who can do with his brush all he wills, to the utmost limits, so it seems, of his ambition. And so we prize him most in those wonderful pictures of carp gliding and swerving through water, of great pine branches powdered with snow, of willow or maple spreading their faultless tracery against a serene space of sky, of birds in flight seen as we might see them if we had an eagle's eye to follow them through the air : all such themes of nature his art seems to hold and image for us as if with the heightened purity of a mirror's reflection. There is nothing blurred, nothing violent, nothing troubled in this unerring art, clean in vision as it is clean in touch. Far removed as Okio's painting is from mere naturalism—for a profound science in composition and a supremely fastidious taste are of its essence—yet it was the realistic effort in it which had most influence on the century. A similar effort is not absent from the work of Ganku, a painter of temperament strongly contrasting with Okio. Ganku, who was Okio's junior by sixteen years, and survived him by more than forty—he

NEW MOVEMENTS

lived on to 1838—comes nearest of the modern masters to the freedom, fire, and grandeur of the Ashikaga times. His brush-work has a vibrant quality which makes Okio's beside it seem cold and almost dry. He is especially famous for his tigers, and painted them in his youth with a patient realism, though his opportunities for study from nature must have been exceedingly limited. Yet he excelled in other subjects too. His paintings of deer and of peacocks are impressive in a way the Shijo pictures very rarely are ; they communicate the dignity of the painter's nature. In these, and still more in his Chinese heroes and sages, he allies himself with the inspired masters of classic times. Ganku is ranked by his countrymen as the founder of a school bearing his name.

While Okio enjoyed fame and prosperity, surrounded by eager disciples, a singular artist led a life of poverty and seclusion in the same city of Kyoto. Soga Shohaku came of the old Soga family which in Ashikaga days had been eminent in art, and himself claimed to be a reincarnation of Soga Jasoku. In his life and in his art he reminds us often of William Blake, who was working at the same time in London. He was thought mad by his neighbours. He poured scorn on the successful Okio, as Blake poured scorn on the successful Reynolds. He turned away from the art of his own time, and

PAINTING IN THE FAR EAST

sought to recapture the strength and fire of the fifteenth-century masters. But, as with Blake, the aspiration was only half realised, and begot a strain of the fantastic and grotesque.

Jakuchiu was another contemporary of marked independence, also not without his eccentricities. He too was poor and careless of worldly success. He painted birds and fish, and was especially fond of cocks and hens, rejoicing in their vigorous plumage and variegated mottlings. His colouring, rich and opaque, reminds one of some of the earlier Ming painters, such as Liu Ch'i. His design is not quite like that of any other Japanese, though it has certain affinities with that of Korin.

Korin himself found a follower in a man of great gift, Watanabe Shiko. It has been sometimes asserted in European books that the Korin style was not revived till the end of the eighteenth century, when Hoitsu took it up and attracted some accomplished pupils. Shiko, however, if not an actual pupil, was a very near disciple. His manner is distinct from his master's, though the difference is hardly to be put into words. The Chinese element is rather stronger in his painting than in Korin's. The British Museum has acquired with the Morrison collection one of his finest works, a pair of sixfold screens of the Four Seasons. Summer flushes and fades into autumn, winter melts into spring, and a group

NEW MOVEMENTS

of white herons about a snow-covered willow seem to feel the awakening of the year, as the flowers begin to put forth their blossoms in the air under the soft cold mists.

Although these various masters were working in Kioto on their own independent lines, the main current of Kioto painting appears in the growth of the naturalistic school, called, from a street in the city, the Fourth Street or Shijo school. The Japanese count Goshun as its founder, while the school of Okio is distinguished as the Maruyama school. But the two schools are the outcome of one movement, of which Okio is undoubtedly the originator. Goshun, as we saw, began as a follower of Buson's style, then fell under Okio's influence. His graceful brush has less fineness and precision than that master's. His followers and successors developed a style in which light, harmonious colouring and an unforced, flexible handling were pursued, in avoidance of the ruggedness and looseness which the Chinese manner was apt to affect. The subjective idealism of the classic schools was discarded, and instead we find Mori Sosen, the incomparable painter of animals, living for months together on fruit and nuts in the woods of Osaka to learn by patient observation the life of the forest monkeys that he loved to paint. Peerless as a painter of monkeys, whether in the rough broad style or in

PAINTING IN THE FAR EAST

his other minuter manner, in which their hairy coats are rendered with the fidelity and much more than the sensitive life of Dürer's animal studies, Sosen is equally happy in his pictures of shy, delicate-footed deer, of which there is an exquisite example in the British Museum, while at South Kensington is a fine picture of peacocks from his brush.

Hoyen is another delightful animal painter, with a humour of his own. Rosetsu puts a touch of oddness and unexpectedness into his animal designs. Mori Ippo is famed for his birds and for his landscapes.

It is sometimes said that the Shijo school avoided the subjects of heroes and sages, and all the legendary lore of the Chinese and Kano schools. They did not often choose these subjects, it is true, but they are by no means unknown to their art. The typical Shijo picture is, however, a nature study; still keeping the singleness of pictorial idea, the charm of design, but emptied of that inner purpose of alliance to a spiritual conception, interpretation, or lofty mood, which was the life of the older schools, and which made their work impressive. We feel some such change as there is between the painting of seventeenth-century Holland and of fifteenth-century Italy.

But meanwhile the Chinese school, which since

NEW MOVEMENTS

Ashikaga times had shown but fitful life, had not only received a new impetus from China itself with the advent of Chen Nan-Ping, but was now reinvigorated and transformed by a master of Japanese birth.

Tani Buncho was the son of a poet in Yedo. Born in 1768, he lived to 1840. Like Matabei and Sotatsu, he created a style of his own by fusing elements from more than one of the established schools. To the romantic feeling of the Southern school of China he added the nervous, masculine brush-line of the North. And as Yeitoku had infused into the Kano style the strong, opaque colour of Ming, Buncho could at times enrich his art with colour effects which seem influenced by a study of the Tosa classics. Buncho painted birds and flowers, and is famous for his romantic mountain landscapes painted in tones of blue and green alone. Fine as these are, they lack something of the dream-like spaciousness and lofty air of the old Chinese. Buncho is at his finest in his rare pictures of sages and heroes. His painting of Shoki, the demon-queller of Chinese legend, standing on a white floor of cloud in the deep blue spaces of heaven, is nobly conceived and splendid in colour.

The school which Buncho founded tended to coalesce with the Shijo style. But his favourite pupil, Watanabe Kwazan (1793-1841), has a place

PAINTING IN THE FAR EAST

apart. Kwazan had in his nature no little of the heroic idealism of an earlier and a greater time. In him we recognise one of those devoted spirits who founded the new Japan of our own day. Like other earnest and thoughtful men of his time, he was deeply persuaded of the evil effects on his country of the Tokugawa policy of isolation. He learnt Dutch, and published a book advocating the renewal of foreign intercourse. The book brought down on him the Shogun's displeasure. "Fearing lest his conduct might invite some misfortune to the lord whom he served, he put an end to his life." The grief of his devoted band of pupils at his death bears witness to the charm and nobility of his nature.

I have already spoken of Hoitsu, Buncho's contemporary, who at the beginning of the nineteenth century revived with brilliant success the style of Korin. Hoitsu was of noble family, and entered the priesthood, but lived most of his life in retirement dedicated to painting. He studied under more than one master, and tried various styles, but in the end chose that of Korin, in which, indeed, he found a natural affinity. When all allowance is made for the immense debt to a predecessor followed so closely, Hoitsu must be credited with real originality to have retained his own spontaneous gift. As a colourist he almost equals Korin,

British Museum.

NEW MOVEMENTS

though it is perhaps inevitable that his choice and delicate art should strike us as a little cold.

The early nineteenth century saw also a rather remarkable revival of the old Tosa style in the hands of a little group of painters, Tanaka Totsugen (d. 1823), Ukita Ikkei (1795-1859), and Reizei Tameyasu (1821-1862). These artists, who have been neglected and ignored by most European writers, are highly esteemed by their countrymen. Their work is no mere affectation of archaism ; it is full of vigour, and, especially that of Tameyasu, splendid in colour. The movement is of interest and significance, too, in its witness to the strong reaction towards the ancient national ideals of pre-Tokugawa days.

One great painter remains to be mentioned—Yosai, best known by his fine book of portraits of celebrated heroes, “Zenken Kojitsu.” Yosai was born in 1787, and died at a great age in 1878. He was of noble family, and after a training in the Kano style made a prolonged study of all the schools, on which he founded his own independent manner. As a figure-painter he has had extraordinary influence. A Fukurokuju by him, in the British Museum, is a noble and original conception of the old sage ascending into Paradise and mounting through the mists of heaven.

Zeshin, famous for his lacquer, was also an admir-

PAINTING IN THE FAR EAST

able painter, using sometimes, as in two charming small examples of still-life in the British Museum, lacquer with his pigments. He died in 1891, aged eighty-five. Kiosai (b. 1831, d. 1889) is famed for his humorous invention, but he excelled in more than the comic vein; as may be seen in Mr. Conder's book on his art, he was a various and vigorous master who brought fresh imagination and real dignity to the treatment of classic themes.

✓ Since the revolution of 1868 there have been a number of painters who have deserted their native tradition, working more or less in the Western style and using the medium of oil. A kind of oil-painting has been known in Japan from quite early times, but has found scarcely any practitioners. In the seventeenth century a certain artist, called Yamada Emosaku, learnt the European method from the Dutch. He was a Christian, and during the persecution of the Christians in that period he distinguished himself by his heroic defence of a fortress. He would have been put to death, but his bravery and his skill as a painter saved his life. A screen * by his hand is extant, which seems to be adapted from a European print. It represents two princes on horseback on a terrace. On the caparison of the horse of one of them is a shield

* Reproduced in the *Kokka*, No. 138. I am indebted for the identification to the late Mr. Max Rosenheim.

NEW MOVEMENTS

with the arms of France and Navarre, which identifies the rider almost certainly as Antoine de Bourbon, father of Henri IV. The other is probably François, Duc de Guise.

But the oil medium has never proved congenial. The hybrid productions of artists of the just-closed era of Meiji have no real felicity. And in recent years a return has been made by the more gifted artists to the old native style, even when treating European subjects. In the Morrison collection, now in the British Museum, is a striking picture of Diogenes in his tub by a living painter, Shimomura Kanzan, in which the head of the sage, with a suggestion of the tub from which he gazes, is treated like that of some Daruma or Jurojin of Eastern legend. For the future of Japanese painting I will venture no prophecy. Hard as it may be to withstand in art the Western influences which have transformed to so great an extent the external conditions of life, I fervently hope that those influences will be withstood, and that the artists of Japan will realise how it is only by being true to its own ancient and inbred traditions that their art can worthily rival the art of Europe.

CHAPTER XVII. UKIYOYÉ AND THE COLOUR-PRINT

UKIYOYÉ in its later phases, as we know it in the manifold production of the colour-print designers, was an art made by artisans for the people. But it had its origin, as we have seen, in the aristocratic schools. For the early days of the Tokugawa rule were days of liberation, when for the first time the nobles took part in the common life and shared the pleasures of the people. Events had, to a certain extent, remoulded society. During the desolating civil wars the court had known poverty and wretchedness ; humanity had invaded its seclusion, with its suffering and its pity. Again, Hideyoshi had risen from low origin to be Regent of the empire, and among his captains were many of obscure rank and birth. When, therefore, under the power of Tokugawa Iyeyasu, peace was consolidated, a single current of ideas could pervade the whole nation. A genial influence melted for the moment old barriers of caste. Relief from the long strain of war and danger brought about an extravagant reaction. It was an age of joy and festival. The new capital of Yedo grew fast ; commerce thrived in her streets with the

UKIYOYÉ AND COLOUR-PRINT

sense of security gained; the middle and lower classes of the nation woke to a consciousness of national life and to a sense of the pleasures of art. So arose Ukiyoyé, a mirror of popular life in all its freedom and variety such as the art of no other country in the world can show.

Under the later Tokugawa Shoguns conditions changed again, and class distinctions became once more rigid—so rigid, in fact, that the populace were cut off from the samurai and the nobles, and lived a life absolutely their own and apart. Ukiyoyé became more and more confined to the artisan; and in spite of Hokusai and Hiroshige, the nineteenth century is in the main a record of its degeneracy.

Matabei was of samurai family, and his subjects were drawn from the middle classes rather than the populace. But only a few years after his death in 1650 there arose an artist who was to be typical of the men of Ukiyoyé as we know it, and who ranks as the second founder of the school. This was Hishikawa Moronobu.* He was the son of an embroiderer, and began life as a pattern designer. He then studied painting, and became an admirable master of the brush. As a painter he

* Moronobu is usually said to have died in 1714, aged seventy-seven. There is recorded, however, in 1695, what seems to be an allusion to his recent death. Mr. Tajima therefore inclines to think that he died in 1694.

PAINTING IN THE FAR EAST

was considerably influenced by that brilliant and unorthodox Kano painter, Hanabusa Itcho. But for the future his importance lay rather in his discovery of the uses of the woodcut in popular art. Woodcut native images of deities and saints had from early times served the same purpose as the prints of Helgen in fifteenth-century Germany. There had been, too, woodcut illustrations to books. Moronobu's innovation was the issue of picture-books (*E-hon*), in which the text was quite subsidiary to the illustration, and of single-sheet prints. And whereas Matabei was unconscious that his work was to form the foundation of a new tradition, Moronobu claimed to be the originator of a school, and styled himself Yamato artist.

An event which was of enormous consequence as a factor in the productions of this popular school was the establishment of the regular theatre, distinguished from the old lyrical drama called *No*, archaic in its severe conventions as early Greek tragedy, which alone found favour with the aristocratic class. In the theatre, to which Japan's first great actor, Danjuro, ancestor of a line of actors still flourishing to-day, gave lustre, the Ukiyoyé artists found endless material, not only in scenes from famous plays, but in the portraits of famous actors. These latter were sold in their thousands, as photographs and picture postcards in Europe

UKIYOYÉ AND COLOUR-PRINT

of to-day. And competing with these were the portraits of famous beauties of the Yoshiwara, the courtesan-city without the gates of Yedo, women who, like the hetairæ of Periclean Athens, were sometimes among the most accomplished of their day, versed in poetry and music.

The history of Ukiyoyé reflects within itself the history of Japanese art as a whole. It is the history of a number of artist families, each keeping mainly to one class of subject ; but it is continually complicated by the fact that when one family line was enfeebled or exhausted, the tradition was often taken up and revived by a man from an opposed school ; or, again, the power of a particular master in one school would attract to his style the pupils of many other schools.

We must at the outset distinguish between two main streams : between those who were chiefly or exclusively painters and those who were chiefly print-designers. The painters were the more fastidious in their subjects, and notably avoided the stage. Of these the first was Miyagawa Choshun, ranked by native critics as the best of all Ukiyoyé painters. He was certainly a charming colourist. Born in 1682, he was a younger contemporary of Moronobu. He designed no prints.

Following up the school of Moronobu, we trace step by step the evolution of the colour-

PAINTING IN THE FAR EAST

print. Brocade-print, *nishiki-yé*, is the Japanese name.

Moronobu's pupil, Kiyonobu, the first of the Torii line, a family which for several generations played a strong part in Ukiyoyé, is credited with the first advance from the hand-coloured proof to the print in which colour was applied by pressure from the wood block. At first two colours only besides the black outline, a rose* and a green tint, were employed ; and a wonderful variety of harmonies was developed within this simple scale. Next a third block was added, and other colours used as well as or instead of the green and rose. At last Harunobu went further, increasing the number of blocks to complete his design with background and atmosphere, and the colour-print in its full splendour was evolved.

It seems to be established beyond dispute that this last step of Harunobu's dates from 1764. But the date of the first simple colour-print is not easy to arrive at. Fenollosa satisfied himself that 1742 or 1743 is the earliest date we are at liberty to assume. But this late date can hardly be maintained, for Kiyonobu, who certainly signed many colour-prints, is recorded by the Japanese "Dictionary of National Biography" as having died on July 28, 1729, at the age of sixty-six, and been buried in the graveyard

* Called *beni* ; it is identical with the "rouge" used in Europe.

UKIYOYÉ AND COLOUR-PRINT

of the Hoshoji Temple at Asakusa. Later writers, such as Dr. Kurth, solve the problem by assuming that all colour-prints signed Kiyonobu are by a son of the same name. I much doubt if this is the right solution. But in any case we are met with difficulties. The hardest thing to understand is that the Japanese were so slow in arriving at the complete print, when the Chinese had produced examples, not less elaborate than those of Harunobu, in the century preceding. Little is known about Chinese prints, but there are colour-printed books dating from the Kang Hsi period, one as early as 1679, and some years ago I had the good fortune to discover in the MSS. department of the British Museum a number of colour woodcuts which were in the Sloane collection, and have therefore been in the Museum since its foundation. Of these the most remarkable are a set of prints* of flower arrangements, flowers and birds, &c., printed from many blocks, with all the refinements of embossing and superposition of tints which we associate with the final stage of colour-printing in Japan. These were brought home by Kaempfer, the historian of Japan, in 1692, and as there is no record of his touching anywhere in China on his voyage, it seems likely that these woodcuts came from Japan, though

* For a description of these and other Chinese colour-prints see the *Burlington Magazine*, April 1907. I have there suggested that the cheapness of the prints accounts for so few being preserved.

PAINTING IN THE FAR EAST

certainly of Chinese workmanship. It is hard to believe that the Chinese invention was not known in Japan ; we have, in fact, evidence that Chinese colour-prints were known to the Japanese before the middle of the eighteenth century, since Shunboku published in 1746 a book printed in several colours which is a copy of a Chinese book published in 1702.

The fact remains that in Yedo at any rate, whether the process was known or not, it was not taken advantage of. The stages by which the Ukiyoyé designers reached the full colour-print were strangely long and slow, whatever hypothesis we adopt as to dates. If Fenollosa's date, 1743, be adopted as the date of the earliest two-colour print, it seems odd that the further step should not have been taken, with so many busy rivals at work, for twenty-two years. It seems odder still that they should have taken sixty years about it, if we assume the beginning of the century as our date for the first use of colour blocks, though my own belief is that about 1725 is the likelier date. Yet oddest of all would it seem, if we returned to Fenollosa's dates, that the Yedo artists should have been so slow to make the obvious transition from hand-tinted proofs to colour-printing, especially when the complete process had been practised, probably for a century at least, in China.

We must leave the matter as it stands. The

祖仙寫圖

UKIYOYÉ AND COLOUR-PRINT

history of human inventions is full of similar singularities. How many discoveries, now in universal practical use, were made in principle centuries ago, yet left unutilised ! We may illustrate even from the history of colour-printing in Europe. In Germany, the home of the woodcut, the idea of colour-printing was brought to practice at the beginning of the sixteenth century. Yet very few colour-prints were made, though the existence of one cut printed in eight colours shows that the possibilities of the process were not ignored. In Italy, about the same time, colour blocks were also used, but Ugo da Carpi did not go beyond two or three tints ; the process was dropped for a century, and only revived sporadically in Europe till the nineteenth century.

But it is time to return to the Ukiyoyé artists. We have, then, during the first half of the century, Kiyonobu and his pupils devoting themselves to theatrical prints ; Okumura Masanobu and his pupils beginning to explore the field of daily life, while not neglecting the fame of noted actors or Yoshiwara beauties ; the school of Choshun proudly confining itself to painting ; while a few, like Sukenobu, worked almost entirely for picture-books, for which the occupations of women—girls, all sweetness and innocence, to look upon, at any rate—provided endless and monotonous material. With

PAINTING IN THE FAR EAST

Harunobu (1718-1770) we arrive at the complete colour-print. But we arrive also at one of the most seductive artists of Japan. Avoiding the stage, Harunobu charms us at once by his subjects. Who can paint more delightfully than he the maidens of his native land? He has a passion for the shyness, the sweetness, the slimness of adolescence; for fragile figures sensitive to the finger-tips of little hands on wrists as slender as stalks of autumn crocus, and even when swaying and bent with emotion, showing hardly more in their soft small faces than flowers do in the wind. We seem to hear the delicate clatter of their pattens as they walk among the irises or the lespedeza bushes, or cross some snow-covered garden bridge, the close skirts clinging round their knees as they take their short, tripping steps. Young lovers, too, Harunobu understands, and is intimate with their moods. Many of his prints bear verses inscribed at the top, which interpret them. We see the tea-house girl, pausing in her work to think of the youth who has come once or twice and captured her heart, but has had no thought of her (she fears)—gone like the cuckoo's cry, one moment near and the next far away. We see the maid blowing soap-bubbles for the delight of her dancing baby brother; and though her will be set to withstand the magic of love (says the verse), yet the wind from the blossoming plum boughs will not suffer her to be at peace,

248

UKIYOYÉ AND COLOUR-PRINT

and her white thoughts are flushed and perfumed. We see young lovers in the moonlit garden saying farewell. "I have broken off a flowering branch," the youth whispers, "and now that I have broken it, it is dearer than ever." The young mother, too, half hidden under the folds of the green mosquito-net, playing with her baby; the young mistress parting the sliding-door of her room in the early morning, the delicate ankles showing under her white night-dress, to find her little waiting-maid huddled asleep on the floor; geisha-girls gazing out to sea, where the distant sails are, or watching the gay boats on the Sumida river from the verandah; a damsel humorously regarding the pretty shape that the shadow* of herself and her umbrella make on the snow; merry children wrestling, playing games, or making a huge snow-dog; all these are of Harunobu's spring-time world. And with all this delicacy and feminine charm, what power is in Harunobu's design! What force and variety in his colour! He loves the tender tones of grey, and rose, and soft yellow; but he strikes in a rich apple-green, a crimson, a chocolate-red, with confident success. His colour-schemes are matter for perpetual study, his designs not less so. His faculty seems inexhaustible in its freshness. It is rarely that

* An instance of the way in which the Oriental artist uses the cast shadow for his own purpose, in spite of traditional convention.

PAINTING IN THE FAR EAST

one finds more than two or three copies of the same print in going through half a dozen collections, containing thirty to fifty examples each. Could we see his entire production we should be astounded.

Harunobu's work was continued by Koriusai, who followed in his steps so closely that at times the prints of the two are scarcely distinguishable. Koriusai excelled in the tall narrow prints made for the posts of houses (*hashirakaké*), and designed some fine prints of landscape, birds, and flowers.

Meanwhile a young artist from the painter-school of Choshun had come to invade the declining Torii school of theatrical print design. This was Shunsho. Using Harunobu's methods, Shunsho re-created the actor print, and produced an infinite array of portraits of actors in character—playing both male and female parts, for the Japanese theatre, like the Elizabethan, had no actresses—and if inevitably monotonous in subject, displayed within these set limits great freshness and masterly draughtsmanship.

With the seventh decade of the century a yet greater figure comes into view, and soon establishes an undisputed sovereignty—Kiyonaga, a scion by adoption of the old Torii line. No kind of Ukiyoyé subject was untouched by Kiyonaga: the actor print, the domestic genre of Harunobu, scenes and figures from the heroic periods, and above all the rich, gay outdoor life of Yedo, its processions, its

UKIYOYÉ AND COLOUR-PRINT

festivals, all the countless ceremonies of the New Year, picnics and excursions to view the cherry-blossom on green knolls above the Sumida banks, the loiterers in temple precincts, groups in restaurant gardens, music parties in house-boats on the river, visits to the sea-shore at the favourite rocky islet of Enoshima, to which at low tide a pathway crosses the sands. Kiyonaga is wonderful in his night scenes. He excels in two-sheet and three-sheet prints, with figures large in proportion to the frame. In his strength of sweeping line, he is without a rival; and his tall figures, beautiful in their stately attitudes, are of a noble type. A certain aristocracy of temper pervades his designs, of whatever subject.

The triumphant power of Kiyonaga attracted followers from all the schools of Ukiyoyé. Shunscho was a fine artist who merged his own individuality almost wholly in the master's style. Shunman also came under the spell, though he retained a poetic and wayward character of his own. But three men who fell under the same sway rose to independent mastery, and worked as rivals in the next following period; these are Yeishi, a deserter from the Kano school of painting, Utamaro, and Toyokuni. Fine as Yeishi can be—and the best of his singularly graceful prints, such as the series that illustrate the *Genji Monogatari*, rank with the masterpieces of Ukiyoyé—he was not the potent personality that

PAINTING IN THE FAR EAST

Utamaro proved. Utamaro in his latter days, passed, as we know, in the Yoshiwara, declined and fell away ; his hand was enfeebled, as his bodily powers were exhausted. We note, too, a tendency to distortion of feature in the effort after emphasis and accentuation. But in the prime of his enormous production Utamaro was unsurpassed. If he has not the serene beauty of Kiyonaga's humanity, if he introduces an element of violence and at times of something almost sinister, he has a stronger sense for the dynamic in figure-drawing, and far greater resource of composition. His felicities of unexpected invention are endless. He should be an inexhaustible study to figure-designers. And his versatility was great. His book of flowers and insects is an exquisite work, delicately drawn with the finest observation ; yet in the portrait-busts of beauties, by which he is most universally known, how large is his boldness, what force is in his style ! How magnificent is his treatment of the masses of black hair ! How expressive his line is of living flesh and blood ! In the sets of prints illustrating that favourite subject of his, the life of the strong boy Kintoki and his wild mother of the mountains, Utamaro is at his most original, soars highest above the common world of Ukiyoyé. His famous triptych of Awabi Fishers (" Les Plongeuses ") is one of the great and rare

UKIYOYÉ AND COLOUR-PRINT

classics of colour-printing. It holds its own with Greek design.

Contemporary with Utamaro's prime is the brief production of Sharaku. No actor-portraits are so incisive, so big in design as Sharaku's, and he was a most original colourist, ranking with the greatest of the school.

Yet it is true that we have passed the meridian of Ukiyoyé. Toyokuni, a lesser man than Utamaro, an artist of strong gift but a nature of no fine fibre, easily yielding to popular demands, was in the main current of the decline and degradation. He too, at his best, can hold his own with greater men for vigour; his earlier actor-prints are splendid; but after Utamaro's death he seemed to fall headlong.

The two most eminent of Toyokuni's pupils were Kunisada and Kuniyoshi. Of these, Kunisada is the more celebrated, but unjustly. Kunisada did much extremely able work, though the mass of his prints, especially after he took Toyokuni's name in 1844, is disfigured by over-emphasis of every kind. Kuniyoshi, on the other hand, stands by himself; in his best work, which is not theatrical, he breaks free from his school, and in his own province, the dramatic, rises to great heights. His preferred subjects are heroic: the feats of old Chinese warriors, the deeds of the Forty-seven Ronins, above all the fierce combats, the sieges, the ambushes, of the

PAINTING IN THE FAR EAST

civil wars of the Middle Ages, the triumphs and disasters of Yoshitsune, of Nitta, of Masashige, of Takauji.

Such subjects as the slain hosts of Taira rising from the waves about the ship of Yoshitsune ; or the defence of the Emperor's person in the barricaded temple of Rokuhara ; or the last fight of Masatsura, when he and his two friends take the bodies of the slain upon their shoulders to shield them from the thick storm of arrows ; such subjects as these are after Kuniyoshi's own heart. Whatever faults these prints have—and they are not, of course, to be compared with the battles of Keion and Korehisa—they show astonishing powers of design. And in the rare print of Nichiren, the famous exiled saint in a snowy landscape, Kuniyoshi rises to nobility.

In this realm of dramatic imagination only one man of Ukiyoyé could match Kuniyoshi, and even he has not left us such splendid dramatic pages—I mean the greatest, most various, and most puissant spirit of them all, Hokusai.

With Hokusai we move away from the main tradition of Ukiyoyé, now hastening to its riot of decay, into an ampler, wider world. It was in landscape, with Hokusai and with Hiroshige, that Ukiyoyé was to renew itself and complete the round of its achievement. Not that Hokusai was not a great master of the figure. But with all his knowledge of humanity, all his mastery of the human

UKIYOYÉ AND COLOUR-PRINT

form, all his immense resource in composition, he has left few figure-subjects in which the essential powers of his genius are concentrated into the unity and perfection that make a classic, as compared with the masterpiece on masterpiece that overwhelm us in his landscapes.

The story of his life has been often told. Born in 1760, he was a pupil of Shunsho, and under the name Shunro produced graceful prints in his master's style. But his independent spirit asserted itself; the two quarrelled, and the pupil was expelled. Hokusai was driven to various shifts to make a living, and was at one time a pedlar in the Yedo streets. Then he procured work as a book-illustrator and designed a vast number of *surimono*, those messages of good luck, invitations, or announcements sent by the Japanese to their friends, chiefly at the New Year; small woodcuts printed with especial care and daintiness. Inexhaustible in fancy and full of charm as these *surimono* are, they give but a hint of the mature strength of the artist. Hokusai reminds us of Rembrandt in the steady ripening of his powers from youth to age; of Turner in the means he took to found his art on a basis of infinite and untiring observation. Hokusai surpassed even Turner in his industry. He could hardly stop drawing to take a meal; he had no time to untie the packets of money with which he was paid, but handed one of them unopened to

PAINTING IN THE FAR EAST

the tradesmen whose bills were 'due. They came back for more if the sum proved not enough ; not otherwise. No wonder that in spite of raging industry he was always poor. Unlike his countrymen, he was careless of his surroundings. When his lodgings grew intolerably dirty he could not stay to tidy them, but hired others. He moved house ninety-three times in the course of his ninety years. At seventy-five his thoughts were all of the future. He had learnt something of the structure of nature and her works, he wrote ; " but when I am eighty I shall know more ; at ninety I shall have got to the heart of things ; at a hundred I shall be a marvel ; at a hundred and ten every line, every blot of my brush will be alive ! " He now signed his work " The Old Man with a Mania for Drawing. " On his death-bed he sighed, " If Heaven had given me ten more years ! " and at the very end, " Five more years, and I should have indeed become a painter ! " It was May 1849. It is the custom with the Japanese, even with criminals condemned to execution, to make a little poem before dying. Hokusai's was this : " Now my soul, a will o' the wisp, can flit at ease over the summer fields ! "

Greatly was this great artist rewarded for his unceasing and laborious cultivation of his gift. His paintings, fine as some of them are, represent him

less truly and far less adequately than the woodcuts made from his designs. In the "Mangwa," or collection of studies and sketches, a series published in fifteen volumes, the first of which appeared in 1817 or earlier, the vast range of his observation is displayed. Nothing in nature escapes his "devouring eye and portraying hand": mountains, rivers, trees, birds, fishes, animals, insects; the forms of breaking waves, flowers, rocks, and ships, buildings, utensils; men and women in every kind of occupation—all workaday Japan; comic and fantastic figures; even gods, saints, heroes, warriors, dragons, and fabulous beasts; all take life under his restless brush. The "Hundred Views of Fuji," printed in black and grey, appeared in 1834; while to the twenties and thirties belong the sets of colour-prints on which Hokusai's fame chiefly rests, the "Thirty-six Views of Fuji," the "Bridges," the "Waterfalls," the "Hundred Poems explained by the Nurse," the "Flowers," the "Ten Poets of China and Japan"; this last set, which is very rare, being in some ways the crown and climax of them all.

I have said that Hokusai reminds us of Turner in the unweariable industry of his eye and hand. He was like Turner in his effort to realise the quantity of fact in nature, an effort corresponding to the genius of the times in Europe, and symptomatic

PAINTING IN THE FAR EAST

even in Japan of the new spirit which was to come to its own in our day. Hokusai allowed no such profusion of accumulated material in the great landscapes of his maturity as Turner did ; yet in some of Turner's noblest water-colours, in the " Blue Righi " and the " Red Righi," for instance, we find a curious parallel in simplicity of design and choice of colour-scheme to some of the famous prints of this unknown and unguessed-at contemporary. Who that has seen a fine impression of the " Fuji in Fine Weather," the vast ruddy cone sweeping up from fringes of dim forest into a sky of clear blue barred with white cloud, or " Fuji from the Hollow of the Wave," with its monstrous billow toppling heavy-crested over the rowers huddling in their boat below (to name two alone of the famous Fuji series), or the " Waterfalls," or the book called " Hokusai Gwashiki," with its marvellous desolate snow scenes, or the finest of the " Bridges " and the " Hundred Poems Interpreted "—who can doubt that the creator of these designs is among the greatest landscape artists of the world ? The audacity with which he eliminates whatever weakens or distracts from the central interest of the design is superb. He brings in a cloud of the old Tosa convention, a solid band with neatly defined edges, where he chooses. The intricacy and profusion of nature's forms and hues are reduced to a scheme of definite

UKIYOYÉ AND COLOUR-PRINT

outlines and definite colours, vivid tones of blue, green, yellow, relieved by white, and frequently opposed by masses of light red. The limitations of the wood block conditioned his designs, and by an enthusiastic acceptance of those limitations he achieves a marvellous success. These landscapes are something quite new in Oriental art. The effect is one of strangeness, a shock of beauty and surprise at once. We feel that the world holds more wonders than we dreamed of, sources of power and exhilaration which Hokusai has revealed, and which we may go on to discover for ourselves. These prints are far removed indeed from the majestic reverie, the aerial vista, the lofty contemplation of the great landscape art of China. The Japanese mind is, I think, at bottom, rather witty than poetical in temper ; and Hokusai is a true Japanese. The spirit which informs his work is no longer the spirit of fastidious choice, but of frank acceptance of the world as it is. Nothing is common to him ; the incongruous stimulates instead of displeasing him. In one of his views of Fuji, the distant mountain is seen through the vast hoop of a cask which a cooper is busily making ; in another the huge stacks of a timber yard form the foreground ; in another, the plight of travellers on a windy road, with their clothes blown in their faces and their hats flying off, is depicted with the enjoyment of a Rowlandson.

PAINTING IN THE FAR EAST

Hokusai finds nothing in nature or mankind irrelevant to the purposes of what, after all, becomes a design of real grandeur. I have no doubt that in our day he would have made of the poles and wires of electric trams material for beauty.

It is this frank and joyous acceptance of the world as it is which attracts modern Europe to Hokusai. It chimes with the prevailing temper of our day. Yet if we turn back to an earlier page of art, to Yeitoku, to So-ami, to Nobuzane, we feel at once that something has been lost. Old and effete conventions, many will say, which it was Hokusai's glory to supersede. But no, the loss is much more than that. Hokusai broadens the bounds of Japanese art, but there are heights he never reaches, moods he is incapable of possessing. If he reminds us of Rembrandt by the breadth of his interest, he has little or none of the tragic insight, the pathos, and deep tenderness of the Dutchman, from whom also his vivid sense of fun and quick-witted alertness are quite alien. The work of the older masters may seem slight and limited compared with his; yet theirs is a world of finer senses, of subtler emotions, of more serious soul. The difference cannot be explained in words. M. Gonse has in his collection two paintings of a plum-branch, one by the fifteenth-century master, Soga Jasōku, the other by Hokusai. One must have some such tangible

260

UKIYOYÉ AND COLOUR-PRINT

comparison before one to understand what Japanese critics mean when they insist on nobility and "lofty tone" in a picture. It is like the difference in "accent" by which Matthew Arnold sought to distinguish among the great poets, but which he could only explain by examples. It is at bottom a difference in attitude of mind rather than of technique; yet we can never really separate the two, and Hokusai's brush-work tells its tale also. His line is jagged and restless; one may see in it a conscious revolt from the long curves and flowing rhythms of Kiyonaga and his peers. Admirably as his figures are placed in landscape, sometimes with real nobility, his figures in themselves are too often defaced by mannerism. He is fond of a strange type, with low, receding forehead and grinning jaw. His fantastic whiskered warriors are referred by European writers to Chinese prototypes, but are like nothing in Chinese art. In the British Museum is a picture of demons trying to bend the bow of the famous archer Tametomo; and here the mannerism of Hokusai's figure-drawing is almost painful, while the pigment is coarse and the colouring hot. For all that, his figures are always alive.

It is necessary to understand Hokusai's deficiencies; for even though he may be thought a mightier artist than any of his predecessors, it is not true that he represents the climax of Japanese

PAINTING IN THE FAR EAST

art, the final genius for whom all those predecessors were preparing. He represents rather a breaking away from those long-maintained traditions, as he lived in a society cut off from those old ideals. When we have followed the course of Japanese painting through the centuries, and become familiar with its aspirations and achievements, we can understand why the Japanese themselves deny a place among their very greatest to Hokusai, even though we can recognise that prejudice has something to do with that denial. When Mr. Joseph Pennell tells us that Daniel Vierge is a greater artist than Raphael, we are most of us irritated and indignant ; and part of our feeling is due to a reluctance to allow that an illustrator in black and white can be judged on equal terms with a painter. This is perhaps a prejudice ; but I would point out that Hokusai's real claims are based on cheap colour-prints, while painting in the East has the same prestige that it has in the West. But prejudice apart, let us confess that the Japanese have a right to be indignant when European writers announce to them that they don't understand their own art, that a mere habit of idolatry explains their admiration of Mitsunaga and Sesshiu and Motonobu, and that Hokusai is by far their greatest master. In criticising an art that is quite new to us, and where there are no established authorities, we have courage to express our genuine opinions.

UKIYOYÉ AND COLOUR-PRINT

I have no doubt that a great many people of to-day really and at heart rank the human interest, the lively and genial observation, of a Dickens above the majesty of a Milton. I confess myself of the contrary opinion ; I confess, too, that some of the old Chinese pictures have given me deeper and more intimate pleasure than even the splendid masterpieces of Hokusai. Yet masterpieces these are. If we have to make detractions from Hokusai, we have to make them too from giants like Rubens in painting, giants like Byron in literature. Some last charm, some final loveliness is absent. But, on the other hand, how would life be poorer without the exultant and for us the exhilarating power of these tremendous personalities !

The invasion of landscape by Ukiyoyé in Hokusai was continued by Hiroshige. We must note as significant a total change in attitude from that of the classic landscape painters. The Ashikaga and later Kano masters painted landscape as the Chinese had done, in the spirit of a communion with the life in nature, as material for the expression of a mood or an emotion. Ukiyoyé landscape has its roots, like our own English landscape, in topography. The classic masters cared nothing for the individual place : it was the universal features of earth and air that moved them ; and, as we have seen, they preferred to paint the imagined scenery of China

PAINTING IN THE FAR EAST

to that of their native land. But with the early nineteenth century came a passion on the populace of Yedo for pictures of the beauties of their own country ; a symptom of the thirst for facts, the knowledge of actualities, pervading the people, which was preparing the way for the overthrow of the Tokugawa policy of isolation, for the era of Meiji and the acceptance of Western science. Illustrated guide-books abounded. Hokusai's landscapes, though so original and often bizarre in effect, were illustrations of renowned views and favourite resorts of the excursion-loving people. Hiroshige now took up the work, and produced an endless series of colour-prints depicting many times over views of Yedo, views of Kioto, views on the famous high-roads, the Tokaido and the Kisokaido, and the inevitable views of Fuji.

After the audacities and heroic simplicities of Hokusai's landscape, it is a fall to Hiroshige, who is interested in smaller things, and who has far less sense for the elemental forces in nature. And yet what a delightful art is his ! He is less concerned with the stable rudiments of earth than with the beauties of their veiling by the atmosphere and changing light. No one has revealed to us so freshly the beauty of rain ; rain showering like light javelins that shine in the returning sun, or mingling with the mist and with the wind that bends

UKIYOYÉ AND COLOUR-PRINT

and tosses a long ridge of blotted pines, or descending in straight rods that hiss on ground or water, or trailing delicate threads that caress the trembling willows. It is incredible how, with four or five colours, crude rather than subtle in themselves, and with only such gradation of flat tint as wiping of the block is capable of, he can bring to our eyes so living an impression of the beauty of twilight, when the last glow fades on the horizon of vast prospects over coast and islands and sea of deepening blue, or of moonrise among great avenues of enormous pines, or of night and stars, or of the flush and sparkle of changing weather among the mountains, or of the falling snow on white knolls and steep slopes above blue gulfs of sea. Hiroshige loves to depict fireworks illuminating the night sky over the Sumida, the crowd of boats on the water, the thronged spectators on the great arch of the Riogoku Bridge. In pictures like the "Battersea Bridge," now in the Tate Gallery, Whistler takes a Hiroshige motive, and even his method of composition, and translates it into a vision of his own. Of all Japanese artists Hiroshige is the one whose influence has been widest on the painting of the West.

CHAPTER XVIII. CONCLUSION

THE colour-prints of Ukiyoyé were the first revelation to Europe of the pictorial art of Japan. Ignorant of all that lay behind these strange, new, ravishing harmonies of line and colour, enthusiasts were prompted sometimes to imagine that here at last was an ideal art, produced by men who were concerned solely with problems of decorative design, indifferent to subject. And under this spell there are those in Europe who imagine that our artists should do likewise.

Yet I am convinced that the finest decorative design has never been produced by men whose conscious aim was solely directed to that end. Two powers are present in the forming of a work of art : creative instinct and conscious intelligence. Two aims are present also : the achievement of beauty in design and the realisation of the life and character in men and things. Success is likeliest when the design comes mainly of the creative instinct and the conscious intelligence is devoted mainly to the realisation of life. With the Ukiyoyé artists this was the case. They were enormously interested in the life around them, not less so than the Dutchmen of the seventeenth century, and they

266

CONCLUSION

set to work to mirror that life, at least the gay and sensuous side of it, in all its detail and variety. But they had this great good fortune, that their path was prepared and their problem infinitely simplified. A strict convention was prescribed them, by which they were relieved from all the difficult and entangling complexities of light and shade. Their mode of design was an inheritance from long ages of production ; it was for the individual to refine and vary on themes of rhythm and balance already found for them by the race. This definite and accepted circumscription proved the artist's liberation. His energies were not absorbed in the intellectual effort of translating the common scene into pictorial terms, a problem which in Europe of to-day each painter must practically set about solving afresh for himself ; but, this translation having been effected for him by the inherited habit of his national art, he was free to invent new harmonies of line and colour on the old basis, and at the same time, within the given limits, to exercise his interest in life and character.

The Ukiyoyé artists were picturing a time with all the manners, occupations, and amusements of its men and women. The value of their work, as art, lies not in this, but in the infinite harmonies of line and colour they created ; yet their conscious motive, as I have said, was not to make decorative

PAINTING IN THE FAR EAST

arrangements so much as to picture the life around them. The Japanese themselves have been in the habit of despising the whole school of Ukiyoyé; and though the causes of this contempt are complex, and partly on the score of art, the main prejudice against the colour-prints is that they remind Japan of a period of degradation, effeminacy, and excess. To our eyes they seem to picture a fairy-land of beauty, removed from gross realities, and we scarcely concern ourselves with the conditions of life underlying it. But to the Japanese, accustomed to nothing more realistic than the pictorial conventions that Ukiyoyé adheres to, the colour-prints are as vivid a picture of an epoch as Dutch genre is to us of seventeenth-century Holland.

And here I would like to ask a question. If we compare Dutch genre-painting with Ukiyoyé what does the latter lack as a representation of the life of a period which the former gives us? Ukiyoyé does not give us effects of light and shade, but these can be seen wherever the sun shines. It does not give us the texture of stuffs and surfaces; it is arbitrary in its types of face and proportions of figure, which vary with each artist's ideal. But if we regard its production from the standpoint of historical interest, quite apart from its value as art, we must confess that it presents us with a far completer picture of the life of a time

268

CONCLUSION

than does the genre-painting of the Dutchmen. But then we must add that the life depicted by Ukiyoyé is far richer and more beautiful in itself. It is a life in which immemorial custom, ceremony, superstition, poetry, legend are like closely interwoven threads making up a many-coloured web. Take almost any print, search out the meanings implied in its subject and accessories, and you will find yourself tracking, by intricate association and allusion, some habit of thought consecrated by a thousand-year-old poem, or be brought back to contemplate the deed of a mediæval hero, or the saying of an Indian saint, or the precept of a Chinese sage. You cannot detach one of these prints from the life that produced it; some tender filament or clinging root binds it to a nation's living heart.

Is it not here that our art of to-day fails in Europe? Our art tends more and more to be detached from the common life, to be dissociated from things of use, to become an affair of museums and exhibitions. This is all part of a wide tendency. The Japanese do not seem to understand an ideal till they have put it into practice. We in the West seem, on the contrary, to think that an ideal practised is no longer an ideal; it is regarded as too good for daily use and in danger of profanation. Is it not so with our religious ideals? Just in the same spirit we hang on walls porcelain plates that are thought too

PAINTING IN THE FAR EAST

beautiful to eat from, though made for no other purpose. We fill a museum with fine works from divers countries, and place it in the midst of streets that desolate eye and heart, without an effort to make them part of the beauty we desire. Art is not an end in itself, but a means to beauty in life. This we forget.

I have been told that a certain Japanese artist, who was studying in London, entered one of our chief art schools. On one occasion the subject of Joan of Arc was set as a theme for competition among the students. What was his amazement to discover that, in attempting such a subject, all that was thought requisite was to pose a model and paint her in armour! To him it seemed that no one could embody in a picture even the least profound conception of a soul incomparable in loftiness and simplicity without weeks of solitary thought, without a strenuous inner preparation, if not with prayer and fasting. We know what is applauded as the "conscientious" treatment of such a subject. The painter studies the period, finds a suit of armour of the right date (which usually turns out to be a little wrong), journeys to Domrémy or Rouen to make careful studies for his scene, perhaps chooses a peasant girl of the Maid's own district for his model; and what energy is left from these labours and the work of elaborating his

270

CONCLUSION

design he devotes to his conception of an heroic soul. A genius of exceptional intensity may, indeed, build on such foundations to magnificent effect, but only one in ten thousand. It was not by such means that Giotto, that Rembrandt, went to the heart of the Gospel stories. And for most the process means absolute defeat. The spirit sets out to conquer matter, and by matter it is conquered. Yet only in the victory of the spirit can art prevail.

The Oriental painter who desires to portray the image of a figure standing in the history of his own lands with such a radiance as Joan of Arc seeks not in outward relics of the past, but in his own heart.

The image of his painting will be perhaps the actual work of a few minutes, but he will not put brush to paper till his mind is saturated with his vision, till the intense emotion it is charged with can be contained no longer. Slight to appearance may be the result; but what a man puts into his work is there, and will be felt by all capable of the feeling that possessed himself, though from the profane it keeps its secret.

In the art of Sung and Ashikaga, those flowering times of the Asian genius, the work of the painter's hand was not conceived of as something objectively complete. Like a drama on the stage which requires a responsive audience before its capacities can be known, it took perfect life only in the beholder's

PAINTING IN THE FAR EAST

mind. Not to build a tangible monument to his own powers was the artist's dream, but to create a beauty in the lives of men. He looked, it may be, to that ideal state, never actually attainable, when men should no more talk of art than the healthy talk of health, because the beauty that had been sought through many images had been found in life itself. But this implies a harmony between painter and spectator, which, alas! no painter can count on with us. The spell of science has corrupted us. We do not ask, before a work of art, "What does this do for me? what does it mean for me as an experience?" but we judge it as a finished, objective achievement, ask whether its anatomy and perspective are correct, attach a moral value to the amount of labour obviously put into it, exercise our intelligence over details—anything rather than let our minds be wisely passive to receive what a true work of art will never give out to those who demand that, without effort or preparation on their part, it shall say all it has to say at once. Masterpieces are fine distinguishers of persons; they will yield all they have to some, while to others they are mute.

If our art ails, it is because our life ails. We shall gain nothing much from the study of the art of China and Japan by trying to adopt, from the outside, beauties of pictorial convention alien

CONCLUSION

to our own modes of vision. But Heaven preserve us from a sterile admiration having its outlet only in a facile and foolish contempt for the achievements of Europe. What we can learn is to regain clearness of mind, and dissolve some of the confusion and anarchy which undermine our art ; and this is an effort for the public even more than for the painter. If we look back over the whole course of that great Asian tradition of painting which we have been following through the centuries, the art impresses us as a whole by its cohesion, solidarity, order, and harmony. But these qualities are not truly perceived till we know something of the life out of which it flowered. We then see that paintings which in themselves seem slight, light, and wayward are not mere individual caprices, but answer to the common thoughts of men, symbolise some spiritual desire, have behind them the power of some cherished and heart-refreshing ideal, and are supported by links of infinite association with poetry, with religion, yet also with the lives of humble men and women. We shall study this art in vain if we are not moved to think more clearly, to feel more profoundly ; to realise, in the unity of all art, the unity of life.

NOTES

NOTES

CHAPTER II. EARLY ART TRADITIONS IN ASIA

THE discoveries in Khotan are described in detail and illustrated in the two works by Sir Aurel Stein, "Sand-buried Ruins of Khotan" (London, 1903) and "Ancient Khotan" (Detailed Report; 2 vols., Oxford, 1907). A number of the actual objects discovered are exhibited in the Asiatic Saloon of the British Museum.

Grünwedel's "Buddhist Art in India" (the English translation edited and amplified by J. Burgess), and A. Foucher's more recent "Art gréco-bouddhique du Gandhara," are authoritative works dealing exhaustively with the Gandhara sculptures, many specimens of which are in the museums of Calcutta and Lahore, in the British Museum, and at Berlin.

Full material for the study of the paintings found at Turfan is to be found in Grünwedel's "Altbuddhistische Kultstätten in Chinesisch-Turkistan" (Berlin, 1912), and in the superb colour-plates of "Chotscho" by Von Le Coq (Berlin, 1913).

For a summary of the results of the various recent expeditions to Eastern Asia see the articles by Petrucci in the *Gazette des Beaux-Arts*, vol. vi. (4th period), p. 193, and in the *Burlington Magazine*, vol. xvii., p. 158. Mrs. Herringham's copies from the Ajantâ frescoes are to be published by the India Society.

CHAPTER III. CHINESE PAINTING IN THE FOURTH CENTURY

Ku K'ai-chih's painting was first described by the present writer in the *Burlington Magazine*, January 1904. A full account of the artist was given by Professor F. Chavannes in the magazine called *T'oung Pao*, Series II., vol. v., No. 3. See also the pages

PAINTING IN THE FAR EAST

devoted to him by Giles, "Introduction to the History of Chinese Pictorial Art," and Hirth, "Scraps from a Collector's Note-book." A reprint, dated 1825, of the "Lives of the Heroines," the Sung book of woodcuts after designs by Ku K'ai-chih, is in the British Museum.

CHAPTER IV. ORIGINS AND EARLIEST PHASES OF CHINESE PAINTING

For the literary records of early art in China see Professor H. A. Giles, "Introduction, &c.," Chapter I; for the trend of thought and development of ideals see Okakura, "Ideals of the East."

The Wisdom of the East Series, published by Murray, includes the "Sayings of Confucius" and the "Sayings of Lao-tzŭ," both translated and edited by Lionel Giles.

CHAPTER V. CHINESE PAINTING FROM THE FOURTH TO THE EIGHTH CENTURY

The most famous of the masters who are recorded in the histories of this period is Chang Sêng-yu (Cho-so-yu in Japanese), who flourished early in the 6th century. He was renowned for his dragons and Buddhist pictures, but also painted hunting scenes and other secular subjects. Fame ranks him among the very greatest of Chinese artists, but no certain work of his is known to survive. In the Freer collection is a Kwan-yin, which is attributed to him.

The monuments of this period still extant in sculpture may be studied in the plates to Chavannes' "Mission archéologique dans la Chine septentrionale."

For a fuller and more detailed account of the subjects of Chinese and Japanese art the reader should consult Dr. Anderson's Catalogue of Japanese and Chinese Paintings in the British Museum; also M. Joly's quite recently published "Legend in Japanese Art" (London, 1907).

For an account of the Six Canons of Hsieh Ho, see S. Taki's "Three Essays on Oriental Paintings," Petrucci's "Philosophie de la Nature dans l'Art d'Extrême Orient," and the present writer's "Flight of the Dragon."

NOTES

CHAPTER VI. THE T'ANG DYNASTY

The principal painters of the T'ang dynasty are :

Yen Li-tê (7th century).

Yen Li-pên (7th century), brother of the preceding. See text. Both these painters were famous for pictures of foreigners.

Wei-ch'ih I-sêng, of Khotan (b. 627). See text.

Chang Hsiao-shih. His picture of the Buddhist Hell was taken as a model by Wu Tao-tzũ.

Li Ssu-hsün (651-716). See text.

Li Chao-tao, son of the preceding, whose style he followed. A rich fragment of landscape attributed to this master is in the Goloubew collection, and is reproduced by Petrucci, "Les Peintres Chinois," p. 20.

Yang Cheng (8th century). Painted portraits and landscapes.

Wu Tao-tzũ. See text.

Lu Lêng-chia, pupil of Wu Tao-tzũ.

Yang T'ing-kuang (8th century). Painted in the style of Wu Tao-tzũ.

Wei Wu-t'ien (8th century). Famous for animals.

Chang Hsüan (8th century). Famous for pictures of women.

Ch'ê Tao-chêng (8th century). Painted Buddhist subjects.

Wang Wei. See text.

Ts'ao Pa (8th century). Painted horses.

Han Kan. See text. Pupil of the preceding.

Ch'ên Hung (8th century). Painted animals and portraits.

Wei Yen (8th century). Famous for pine-trees.

Chang Tsao (8th century). Painted landscapes in the Southern style.

Chou Fang (8th and 9th centuries). Painted Buddhist subjects, portraits, &c. A fine portrait of Lao Tzũ is in the Freer collection.

Pien Luan. See text.

Paintings in Japan attributed to T'ang masters are reproduced in the "Toyo Bijutsu Taikwan," vol. viii. Among these is

PAINTING IN THE FAR EAST

the portrait of a priest by Li Chên, which was brought to Japan from China by Kobo Daishi. It is one of the most important documents existing for the study of the T'ang style.

CHAPTER VII. EARLY PERIODS OF PAINTING IN JAPAN

Principal painters :

- Kosé Kanaoka (9th to 10th century).
- Yeri Sozu (d. 935).
- Kosé Kintada (10th century).
- Kosé Hirotaka (10th to 11th century).
- Yeshin Sozu (942-1017).
- Takuma Tamenari (11th century).
- Kasuga Motomitsu (11th century).
- Takayoshi (11th century).
- Chinkai (12th century).

The chief works of the Fujiwara period preserved in Japan have been reproduced in "Toyo Bijutsu Taikwan," vols. i. and ii.

CHAPTER VIII. THE KAMAKURA PERIOD

Principal painters :

- Toba Sojo (1053-1140).
- Takuma Choga (12th century).
- Takuma Shoga (12th-13th centuries).
- Takanobu (12th century).
- Mitsunaga (12th century).
- Keion (13th century).
- Nobuzane (1177-1265).
- Nagataka (13th century).
- Yoshimitsu (14th century).
- Takakane (14th century).
- Mitsuhide (14th century).
- Korehisa (14th century).
- Mitsunobu (1434-1525).
- Yukihide (15th century).

Apart from the Keion roll at Boston and a few other examples,

NOTES

the early painters of the Yamato school are hardly to be studied in Western collections except in their Buddhist pictures. Fine examples of these are at Boston ; a few are in the British and other European Museums. One of the most important and beautiful paintings of the period in Europe is the portrait of a priest in the Louvre (reproduced in Fenollosa's "Epochs," frontispiece to vol. ii.).

CHAPTER IX. THE SUNG PERIOD IN CHINA

Principal painters :

- Li Ch'êng (late 10th century). Famous for landscapes.
- Hsu Hsi (10th century). Painted flowers.
- Fan Kuan (10th and 11th centuries). Famous for landscapes. An example is in the Freer collection.
- Tung Yüan (10th century). Painted landscapes, animals, &c. Landscapes attributed to him are in the Freer collection.
- Chao Ch'ang (11th century). Painted flowers.
- Kuo Hsi (11th century). See text. In the Freer collection are several paintings by and attributed to the master. A landscape roll has recently been acquired by the Metropolitan Museum, New York. Kuo Hsi's essay on landscape is translated in Fenollosa's "Epochs of Chinese and Japanese Art." See also Petrucci, "Morceaux Choisis d'esthétique Chinoise," in *Ostasiatische Leitschrift*, January 1913.
- Li Lung-mien, or Li Kung-lin (d. 1106). See text.
- Chao Ta-nien, or Chao Ling-jang (11th to 12th century). See text. Two paintings attributed to him are in the British Museum.
- Mi Fei (1051-1107). See text.
- Hui Tsung (1082-1135), the Emperor, and founder of the Academy. See text. Paintings attributed to him, especially of falcons and eagles, are to be found in the British Museum and many other collections. A picture of "The Emperor instructing his Son" is in the Musée Guimet.

PAINTING IN THE FAR EAST

Li Ti (12th century). See text.

Ma Yüan (12th and 13th centuries). See text.

Ma Lin, son of the preceding. A landscape with Rishi, by him, is in the Musée Guimet.

Hsia Kuei (12th and 13th centuries). See text.

Mu Ch'i (13th century). See text. Cf. Fenollosa, "Epochs," vol. ii, p. 47.

Li An-chung (13th century). Painted birds.

Liang K'ai (13th century). Painted sages, landscapes, &c.

Examples of most of these masters are reproduced in the *Kokka* or in the Shimbi Shoin's publications.

CHAPTER X. THE MONGOL DYNASTY

Principal painters :

Chao Mêng-fu (b. 1254). Painted horses, huntsmen, landscapes.

Ma Kuei (13th century). Painted landscapes.

Ch'ien Shun-Chü (13th century). Painted flowers, animals, figures.

Wang Jo-shui (13th century). Painted flowers.

Chao Tan-lin (13th century). Painted animals.

Yen Hui (14th century). Painted Rishi.

Yen Yeüh-shan (14th century). Painted landscapes with sages.

Tibetan Paintings.

Of these a good number have come to Europe and America in the last few years. A fairly representative collection is in the British Museum.

Persian Paintings.

These can best be studied in the illuminated manuscripts, of which there are magnificent specimens in the British Museum and in the Bibliothèque Nationale, Paris.

NOTES

CHAPTER XI. THE ASHIKAGA PERIOD IN JAPAN

Principal painters :

Chinese School.

- Nen Kao (d. 1345).
- Gukei (14th century).
- Tesshiu (14th century).
- Cho Densu (1352-1431). *B.M.*¹
- Kan Densu (15th century).
- Shiubun, the priest (15th century). *B.M.*
- Soga Shiubun. *B.M.*
- Soga Jasoku (15th century). *B.M.*
- Kantei (15th century). *B.M.*
- Oguri Sotan (15th century). *B.M.*
- Keishoki (15th century).
- Noami (15th century). *B.M.*
- Geiami (15th century).
- So-ami (15th century). *B.M.*
- Riukio (16th century). *B.M.*
- Yamada Doan (d. 1573). *B.M.*

Sesshiu School.

- Sesshiu (1420-1506). *B.M.*
- Shiugetsu (15th century). *B.M.*
- Unpo (15th century).
- Shiuko (15th century).
- Sesso (15th century).
- Sesson (16th century). *B.M.*
- Unkoku Togan (16th century). *B.M.*
- Hasegawa Tohaku (1539-1610).

Kano School.

- Masanobu (1453-1490). *B.M.*
- Motonobu (1476-1559). *B.M.*
- Utanosuke (d. 1575). *B.M.*
- Shoyei (1519-1592). *B.M.*
- Hideyori (16th century).

¹ In this and the following notes, *B.M.* after a painter's name indicates that work by him, or attributed to him, is in the British Museum collection.

PAINTING IN THE FAR EAST

All these masters are represented in the *Kokka* and the Shimbi Shoin publications. "Masterpieces of Sesshiu" and "Masterpieces of Motonobu" have been published in separate volumes. The Shimbi Shoin has also issued an admirable facsimile of Sesshiu's greatest landscape, the famous makimono belonging to Count Mori.

Many fine examples of the period are in the Boston Museum and in the Freer collection, and some of the masters are represented in the Berlin Kunstgewerbe Museum, in the Ostasiatische Museum, Cologne, and in the Louvre.

CHAPTER XII. THE MING PERIOD IN CHINA

Principal painters :

- Lin Liang (15th century). *B.M.*
- Lü Chi (15th century). *B.M.*
- Tai Chin (15th century).
- Wang Lieh-pên (15th century). *B.M.*
- Shên Chou (1427-1507).
- T'ang Yin (1466-1524). *B.M.*
- Chiu Ying (15th century). *B.M.*
- Wu Wei (15th century). *B.M.*
- Wên Chêng-ming (1522-1567). *B.M.*

An adequate conception of the various Ming styles can be got from the paintings in the British Museum, the Musée Guimet, and the Louvre.

CHAPTER XIII. THE KANO SCHOOL IN THE SIXTEENTH AND SEVENTEENTH CENTURIES

Principal painters :

Kano School.

- Yeitoku (1543-1590). *B.M.*
- Sanraku (1573-1635). *B.M.*
- Kaihoku Yusho (1533-1610). *B.M.*
- Niten (1582-1645).
- Sansetsu (1589-1651). *B.M.*
- Tanyu (1602-1674). *B.M.*

NOTES

Morikage (17th century). *B.M.*

Naonobu (1607-1680). *B.M.*

Yasunobu (1613-1685). *B.M.*

To-un (1623-1694). *B.M.*

Tsunenobu (1636-1713). *B.M.*

Itcho (1652-1725). *B.M.*

Chinese School (of the same period).

Chokuan (16th century). *B.M.*

Ni Chokuan (17th century). *B.M.*

Shokwado (1584-1639). *B.M.*

Tosa School.

Mitsunori (d. 1638). *B.M.*

Mitsuoki (1617-1691). *B.M.*

Mitsunari (1646-1710). *B.M.*

Sumiyoshi Jokei (1597-1668). *B.M.*

Sumiyoshi Gukei (1631-1705).

The Boston Museum and the Freer collection are exceptionally rich in Yeitoku, Sanraku, and their school."

CHAPTER XIV. MATABEI AND THE BEGINNINGS OF GENRE

The work of Matabei, as of his precursors and immediate followers, is best to be studied in the sumptuous first volume of "Masterpieces of the Ukiyoyé School," edited by S. Tajima (Tokio, 1906).

CHAPTER XV. THE GREAT DECORATORS

Principal painters :

Koyetsu (1557-1637). *B.M.*

Koho (1601-1682).

Sotatsu (17th century). *B.M.*

Korin (1661-1716). *B.M.*

Shiko (d. 1755). *B.M.*

In fine examples of this school the American collections, especially the Freer collection, are far richer than Europe.

PAINTING IN THE FAR EAST

“ Masterpieces of the Korin School ” has been published by the Shimbi Shoin (Tokio, 1903, 1904), and “ Choice Masterpieces of Korin and Kenzan ” by the Kokka Co.

CHAPTER XVI. NEW MOVEMENTS

Principal painters :

Neo-Chinese School.

Riurikio (1706-1758).
Taigado (1723-1776). *B.M.*
Buson (1724-1783). *B.M.*
Jakuchiu (1716-1800). *B.M.*
Chikuden (1777-1835). *B.M.*
Buncho (1763-1840). *B.M.*
Kwazan (1793-1841). *B.M.*
Hanko (1782-1846). *B.M.*
Chinzan (1801-1854). *B.M.*

Soga School.

Soga Shohaku (18th century). *B.M.*

Korin School.

Hoitsu (1761-1828). *B.M.*
Honi (19th century). *B.M.*
Ki-itsu (1836-1898). *B.M.*

Maruyama and Shijo Schools.

Okio (1733-1795). *B.M.*
Genki (1749-1796). *B.M.*
Rosetsu (1755-1799). *B.M.*
Nangaku (d. 1813). *B.M.*
Goshun (1752-1811). *B.M.*
Sosen (1747-1821). *B.M.*
Naokata (1756-1833).
Tessan (d. 1841). *B.M.*
Keibun (1779-1844). *B.M.*
Toyohiko (1778-1845). *B.M.*
Ippo (19th century). *B.M.*
Hoyen (19th century). *B.M.*
Raisho (1796-1871). *B.M.*

NOTES

Yosai (1788-1878). *B.M.*
Bunrin (1814-1883). *B.M.*
Zeshin (1817-1891). *B.M.*

Ganku School.

Ganku (1745-1834). *B.M.*
Gantai (19th century). *B.M.*
Chikudo (1826-1896). *B.M.*

Good examples in various styles of the Chinese painting of the 17th and 18th centuries are in the British Museum, but little information about these Chinese painters is accessible. See Hirth, "Scraps from a Collector's Note-book." The Shimbi Shoin has published "Masterpieces of Jakuchiu" and two volumes of "The Maruyama School." Of the masters of the late Kano school, Boston Museum has a vast amount; some good screens (presents from a Shogun) are in the Ethnographical Museum at Leyden.

CHAPTER XVII. UKIYOYÉ AND THE COLOUR-PRINT

Principal painters :

Moronobu (1624-1695). *B.M.*¹
Moromasa (18th century). *B.M.*
Kwaigetsudo (18th century). *B.M.*
Choshun (1682-1752). *B.M.*
Okumura Masanobu (1678-1690). *B.M.*
Kiyonobu (1664-1729).
Kiyomasu (1679?-1763).
Sukenobu (1674-1754). *B.M.*
Tsukioka Settei (d. 1787). *B.M.*
Harunobu (1718-1770). *B.M.*
Koriusai (18th century). *B.M.*
Shunsho (1726-1792). *B.M.*
Kitao Masanobu (1761-1816).
Kiyonaga (1742-1815).

¹ In this note *B.M.* indicates that the master in question is represented by a painting or paintings. The reference does not cover the colour-prints. For instance, the Musuem contains a large collection of Utamaro's prints, but has no painting by him.

PAINTING IN THE FAR EAST

Yeishi (18th-19th century). *B.M.*

Utamaro (1754-1806).

Toyokuni (1769-1825). *B.M.*

Hokusai (1760-1849). *B.M.*

Hokuba (19th century). *B.M.*

Hiroshige (1797-1858). *B.M.*

The fullest information yet published on Ukiyoyé is to be found in the five volumes of "Masterpieces of Ukiyoyé" (Shimbi Shoin).

The colour-prints of Ukiyoyé can be studied in many public museums of Europe—the British Museum; the Victoria and Albert Museum; the Louvre; the Musée du Cinquante-naire, Brussels; the Ethnographical Museum, Leyden; the Kunst-gewerbe Museum, Berlin; the Print Room, Dresden; the Ostasia-tische Museum, Cologne; the Chiossone Museum, Genoa, &c.; and in America, the Boston Museum; the Metropolitan Museum, New York; and the Public Library, New York.

Extracts from Reviews of the First Edition of

PAINTING IN THE FAR EAST

BY LAURENCE BINYON

“OF late years the secrets of the great Japanese collections have to a large extent been opened by those splendid Japanese art publications, the *Kokka* and *Shimbi Taikan*, and it is now possible for the European student to breathe the ‘pure serene’ of a new kingdom in art by the aid of the closest possible translations. . . . He must put himself in tune with a new mode of thought, and be prepared to accept a less gross and material view of art than that which is in the European habit; and here, to set him in the right path at the outset, comes Mr. Binyon’s admirable work, by aid of which he may readily apprehend what to earlier students has been a matter of long thought and cultivation of mind and eye.

“The book does not purport to be a complete history of the art—no more, in fact, than an introduction to its study; but in its own scope the work is singularly complete and notably illuminating. Henceforth it is to this book that the scholar must have first recourse before entangling himself in the complicated histories of the schools, and, indeed, even before addressing himself to the examination of the essential thing, the work of the Eastern painters itself. Admirably written, clear and felicitous in expression, it presents a true exposition of the spirit and meaning of the greatest of all the arts of China and Japan, placing its philosophy by the side of that of our own art—so far as our own has a stated philosophy—and making clear its origins, its aims and its beauties.”—Mr. ARTHUR MORRISON in *The Burlington Magazine*.

“The more we consider the book the more we are struck with its excellence. Not only is it coherent in plan, not only is it the work of a poet and man of letters, but it displays everywhere the intimate sympathy with Oriental thought, and the knowledge of Oriental history and religion, which are essential if Eastern art is to be introduced to Western minds.”—*The Times*.

“Knowledge of Oriental art is in this country still confined, save in the case of a few specialists, to porcelain and Japanese colour-prints. In the book before us, written by a man of poetic temperament, who uses the English language in such a way as to compel respect and kindle enthusiasm, Mr. Binyon lifts the veil a little, and indicates the existence of an art which in its kind has never been surpassed. Innumerable pearls of thought and of expression are discoverable in these learned, eloquent, and imaginatively moving pages.”—*Art Journal*.

“Mr. Binyon in writing of the painting of China and Japan is able to interest and instruct us not only because of his expert knowledge. He is able, again, to bring to bear on his subject a wide and sympathetic acquaintance with European art. Thus his book is not merely a history of schools and individual painters, but also a reasoned inquiry into the fundamental principles which both separate and unite the art of East and West.

“Mr. Binyon’s book delights us not only by the interest of the subject, but also by the charm of its style and power of expression.”—*Spectator*.

LONDON: EDWARD ARNOLD

Extracts from Reviews of the First Edition

“ Grâce à M. Binyon, pour la première fois, on pourra, d’un coup d’œil d’ensemble qui ne se perdra pas dans des horizons trop vastes, comprendre la grandeur et la beauté de l’art chinois et de l’art japonais dans une de leur plus hautes manifestations. Son livre est le premier ouvrage méthodique et précis consacré à l’étude de la peinture de l’Extrême-Orient, et la clarté de son esprit, comme la qualité de son intelligence et de son goût, lui ont permis de dominer constamment le sujet et de n’en jamais perdre les grandes lignes.”—*La Chronique des Arts et de la Curiosité*.

“ *Painting in the Far East* is a work which has grown out of the lectures which Mr. Binyon delivered not long ago, when they attracted a great deal of attention. To the wider public reached by the printed word they will only be less fascinating because Mr. Binyon is not present to read them.

“ He has concentrated into one volume the knowledge scattered in many books which ordinary people have no time to read; but he has also added the results of his own rare experience and connoisseurship. With his unique literary gifts he is able to impart information without ever being dull. He enables us to appreciate the fundamental differences between Oriental and Occidental art.”—*Morning Post*.

“ As far as the literary labours of another can assist us to knowledge, we are assisted here, and in the most agreeable way. Fulness of knowledge, moderation of statement, and steadily maintained care are visible from end to end of his volume.”—*Pall Mall Gazette*.

“ Das Buch gibt zum erstenmal eine Gesamtübersicht über das, was wir heutzutage von asiatischer Malerei wissen, und zwar auf ungemein klare, anschauliche Weise und in vollendetster sprachlicher Form.”—*Gesellschaft für Vervielfältigende Kunst und Mitteilungen*.

“ Mr. Binyon’s scholarly treatise on Eastern ideas and ideals in art is a volume which demands close attention and warrants full appreciation. To sum up its excellencies in a few brief words, one may say that it is an example of the kind of work by which German literature has been more frequently enriched than that which stands to the credit of our own country. There cannot, of course, be any short road to learning with such an important subject as the one under consideration, but Mr. Binyon presents within the silken covers of a production which is as tasteful as it is informative, as truly popular a work as is compatible with the dignity and scope of his theme, and satisfactory to his own accomplishments, among which high purpose and thoroughness of research are not by any means the least attributes.”—*Evening Standard*.
